Turnkey solutions with certified partners.

CONTRACT MANUFACTURING & SERVICES

Assemblies

Steven Engineering's vertically integrated manufacturing capabilities ensure that we can maintain impeccable quality control standards throughout the assembly processes. Whether your objective is to lower overall material costs, labor expenses or total cost of acquisition, you can save time and money outsourcing with us.

Identification

With a vast range of versatile identification products in stock to meet your specific needs, we can also assist in design and production of your custom identification requirements. From wire markers and safety labels to fully engraved panels, including marking the most difficult materials — we do it all!

Enclosures

Discover the value of enclosures modified to your specifications, while substantially reducing labor costs, trimming production and delivery times, improving product procurement flow, gaining flexibility, and utilizing our in-house engineering support staff. Our services include: layout, drilling, tapping, cutting, painting, sub-system assembly and much more.

Services

With over 35 years of experience in developing a vast array of customer specific services and programs, Steven Engineering has the knowledge and wherewithal to assist in lowering associated costs in all facets of procurement and production.
