

Altivar® 21

Variable speed AC drives

Unmatched value for HVAC

For 3-phase asynchronous motors from 1 HP to 100 HP

Simply Smart!

Leverage
ingenuity
and intelligence
for **ease of use**

The *essential connection* between you and your pump and fan applications!

The Telemecanique® brand Altivar® 21 variable speed AC drive controller offers just the right features for centrifugal pump and fan applications. Offering unmatched value in installed cost and functionality for HVAC equipment, this new range of drives allows original equipment manufacturers and control panel builders to focus on the essentials.

The economical choice

- Reduces installation costs by eliminating throttling valves or inlet guide vanes typically used to control flow, and saves time with quick installation and wiring.
- Provides energy savings by reducing motor speed for a quick return on investment.
- The Altivar 21 drive energy economizing motor algorithm maximizes energy savings.

Communication option board

Simple installation and operation

- Parameters are factory configured immediate start-up.
- Features pump and fan macro-configurations for easy and quick commissioning.
- Includes local controls for testing and troubleshooting.

Save and download configuration files

- PC software.
- Remote keypad/display.

Compact footprint

- Small size and side-by-side mounting require less panel space.

Easy integration into building management systems

- Internally mounted option cards connect to Lonworks, BACnet, MetaSYS N2 and APOGEE P1 FLN networks.
- Complies with international standards and certifications: CE, UL, CSA, C-Tick, etc.

Harmonics mitigating design

- Eliminates the need for line reactors and chokes for reducing harmonics: THDI < 30% (IEC61000-3-12 < 48%).

Remote mount keypad/display

Onboard keypad/display

Onboard and remote-mounted keypad and display for *configuration* and *monitoring*

- Four segment LED display with run status LED and unit indicator LED (percent or Hz).
- Run/stop buttons and up/down arrow keys for local speed control.
- Run status LED and unit indicator LED (percent or Hz).
- Local/remote button with LED indicators.
- Programming buttons include MODE, ENT and up/down arrows.

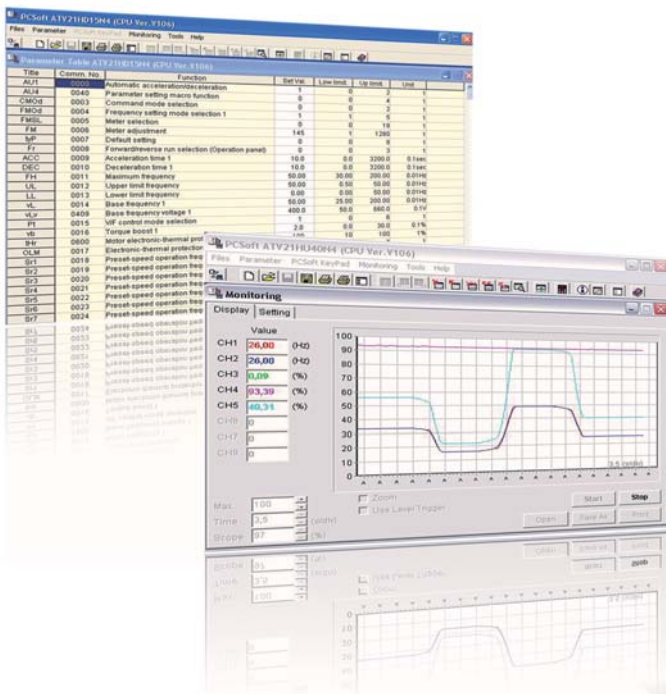

Remote mount keypad/display additional functions:

- The IP65 rated.
- Includes ability to store three (A, B, C) drive configurations.

Start up *right* with PC *Soft!*

PC Soft is an easy to use software program for commissioning the Altivar 21 drive. Capabilities include:

- Parameter adjustments.
- Store and transfer drive configuration files.
- 8 channel Oscilloscope function to monitor I/O, drive and motor operation.
- Work in either on or/off-line modes.
- PC Soft can be downloaded at no cost from www.us.telemecanique.com.

Manage and your buildings

Enjoy the benefits from a drive des pump and fan applications.

Ventilation:

- **Detection** of fan belt breakage.
- Automatic **restart**, catch on the fly.
- **Jump frequencies**.

Pumping:

- **Continuous service** assured in the event of loss of feedback signals: fallback position, automatic/manual operation.
- **Safety and protection of pump:**
Detection of current threshold.
Limitation of operating time at low speed.
PTC probe management.

Heating and air conditioning:

- Adjustment of flow rates on the basis of actual needs for better **energy management** using the internal PI regulator.
- **Suppression of mechanical resonance** and noise using jump frequencies and the switching frequency, adjustable to 16 kHz, during operation.
- **Reduction of consumption** using energy saving and quadratic ratios.
- **Installation monitoring:** diagnostics, fault management, alarms.

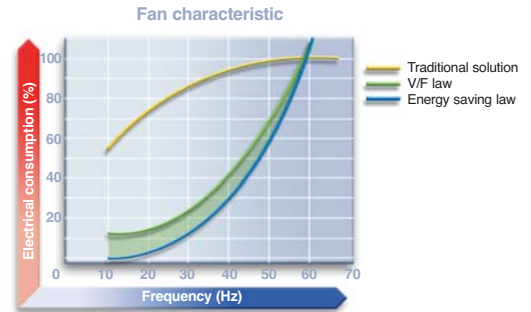

monitor s using Altivar® 21 drives.

signed specifically for

Ventilation: Supply and return air fans

- **Enhanced comfort** by reducing noise pollution caused by the motor with random switching frequency modulation.

Ventilation: safety/smoke extraction

- Drive **forced start** function with fault inhibition, selection of running direction and speed reference.
- **Catch on the fly** by speed search, regardless of the direction of rotation to start windmilling fans.

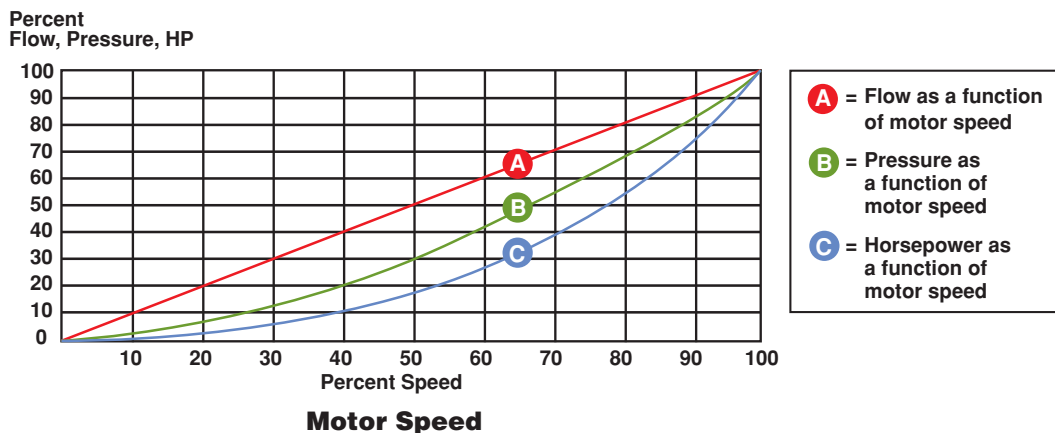

Pumping: water regulation

- Essential functions for the **protection** of your installations.
- **Detection** of underload, overload.
- **Detection** of absence of fluid.

Go *green* with Altivar® 21 drives!

Let the Altivar 21 drives operate your buildings with greater efficiency; using them on fans and pumps can significantly reduce your energy costs. In many instances, the payback period for installing adjustable frequency drives in place of other flow control methods is less than 12 months.

Most HVAC systems are designed to keep the building cool on the hottest days and warm on the coldest days. Therefore, the HVAC system only needs to work at full capacity on the 10 or so hottest days and the 10 or so coldest days of the year. On the other 345 days, the HVAC system may operate at a reduced capacity. This is where a variable air volume system with variable frequency drives (VFDs) can be used to match air flow to actual heating and cooling demands. The VFD can reduce the motor speed when full flow is not required, thereby reducing the power required and the electrical energy used.

An example of an energy saving calculation*

A fan with a 20 horsepower motor supplies air 10 hours a day for 260 days a year and the energy cost is \$0.10 cents per kilowatt-hour.

Cost of running the motor at full speed:

$$20 \text{ HP} \times 0.746 \text{ kW/HP} \times 2600 \text{ hours} \times \$0.10/\text{kWhr} = \mathbf{\$3,879.20}$$

Assuming the fan does not need to run at full speed for the full 2600 hours, let's use an example where it runs at full speed 25% of the time, at 80% for 50% of the time, and at 60% for the remaining 25% of the time:

Cost of running with an AC drive controlling the motor:

$$20 \text{ HP} \times (1) \frac{1}{3} \times 0.746 \text{ kW/HP} \times 650 \text{ hours} \times \$0.10/\text{kWhr} = \$969.80$$

$$20 \text{ HP} \times (0.8) \frac{1}{3} \times 0.746 \text{ kW/HP} \times 1300 \text{ hours} \times \$0.10/\text{kWhr} = \$993.08$$

$$20 \text{ HP} \times (0.6) \frac{1}{3} \times 0.746 \text{ kW/HP} \times 650 \text{ hours} \times \$0.10/\text{kWhr} = \$209.48$$

$$\mathbf{Total} = \mathbf{\$2,172.36}$$

$$\mathbf{Annual savings: \$3,879.20 - \$2,172.36 = \$1,706.84}$$

**Actual results may vary for closed loop pumping and variable air volume systems.*

Altivar® 21 drives

Thinking of the future: conserving earth's *energy*

Within its sustainable development policy, Schneider Electric is committed to environmental friendliness.

“Our products safeguard life, make goods safer and optimize the consumption of energy and natural resources. We are actively involved in design, production, distribution and recycling processes that are environmentally friendly. Protection of the environment forms an integral part of our strategic decision making.”

Manufacturing is compliant with ISO 14001: materials used for the Altivar 21 drive have been selected for their minimal impact on the environment. Conformity to the European directive ROHS (Restriction Of Hazardous Substances) that prohibits the use of materials such as lead, cadmium, mercury and hexavalent chromium.

A variable air/water/refrigerant volume HVAC system controlled by VFDs will go a long way in helping a new or existing building achieve greater energy efficiency. Not only will HVAC systems run by VFDs save money, but they also will increase the comfort of the building and reduce equipment maintenance costs and downtime. Plus, meeting the requirements of the Energy Policy Act of 2005 and achieving a more “green” system through LEED certification can offer more money-saving opportunities if the building is eligible for state and local government incentives. Ultimately, more efficient HVAC systems create more energy efficient buildings, which in turn conserves energy resources across the U.S. and the world.

The *green building* movement is on!

The Altivar 21 drive can help create green buildings. The U.S. Green Building Council® (USGBC) developed and administered the LEED® (Leadership in Energy and Environmental Design) Green Building Rating System™ to define green buildings. One of the prerequisites of the LEED-NC Energy and Atmosphere component is meeting both the mandatory provisions and prescriptive/performance requirements of ASHRAE 90.1-2004. This standard sets minimum requirements to promote the principles of effective, energy-conserving

design for buildings and building systems. More specifically, the ASHRAE prescriptive strongly recommends that HVAC systems with total fan power greater than 5 HP have variable air volume fan control and that individual variable air volume fans with motors greater than or equal to 15 HP have variable speed drives.

For government buildings, government regulations such as the Energy Policy Act of 2005 (EPAAct) mandate energy monitoring and energy efficiency improvements. LEED certification alone has its benefits. In addition to saving energy costs, it also allows the building owner to take advantage of state and local government incentives and makes the building project more marketable to tenants who are seeking more energy-efficient/sustainable facilities. The Altivar 21 drive can help create green buildings by providing gains in energy efficiency, easier commissioning and monitoring of the building and by its Eco-Design.

Specifications

Electrical

Input Voltage	200 -15% to 240 +10%, 380 -15% to 480 +10%
Input Frequency	50 Hz -5% to 60 Hz +5%
Drive Input Section	Six pulse bridge rectifier
Drive Output Section	Three Phase, IGBT Inverter with Pulse Width Modulated (PWM) output Maximum voltage equal to input voltage
Galvanic Isolation	Galvanic isolation between power and control (inputs, outputs and power supplies)
Frequency Range of Power Converter	0.5 to 200 Hz
Torque/Overtorque	120% of nominal motor torque for 60 seconds
Current (transient)	110% of controller rated current for 60 seconds, 180% for 2 seconds
Switching Frequency	Selectable from 6 to 16 kHz, 12 kHz nominal rating for 1 HP to 20 HP @ 200/240 V, 380/480 V Selectable: 6 to 16 kHz, 8kHz nominal rating for 30 HP to 40 HP @ 200/240 V, 30 HP to 100 HP @ 380/480 V
Logic Inputs	3 logic inputs (F,R,RES) 24 Vdc, compatible with level 1 PLC, IEC 65A-68 standard Impedance: 3.5 k Ω , Maximum voltage: 30 Vdc, Max. sampling time: 2 ms \pm 0.5 milliseconds Multiple assignment makes it possible to configure several functions on one input
Speed Reference Inputs	VIA: Voltage analog input 0 to 10 Vdc, impedance 30 k Ω (max. safe voltage: 24 Vdc). Analog current input X–Y mA by programming X and Y from 0 to 20 mA, with impedance 242 Ω . Can also be configured as a logic input VIB: Voltage analog input, configurable as an analog input or as a PTC probe input. 0–10 Vdc, impedance 30 k Ω (max. safe voltage 24 Vdc)
Analog Reference Resolution	0.0048 Hz (11 bits)
Relay Outputs	FL (FLA,FLB,FLC) 1 N/C contact, and 1 N/O contact with common point R (RY,RC) 1 N/O contact Maximum switching capacity: • On resistive load (cos ϕ = 1): 5 A for 250 Vac or 30 Vdc • On inductive load (cos ϕ = 0.4 and L/R = 7 ms): 2 A for 250 Vac or 30 Vdc
I/O Sampling Time	2 milliseconds \pm 0.5 milliseconds on analog inputs & outputs, & logic inputs, 7 milliseconds \pm 0.5 milliseconds on relay outputs
Acceleration and Deceleration Ramps	0.1 to 3200 seconds (definition in 0.1 seconds increments)
Skip Frequencies	Three configurable skip frequency/jump frequency bands
Motor Control Profiles	Energy economizer (flux optimization) motor algorithm to maximize energy savings. (Automatically optimizes voltage based on load) or select volts/hertz profile or SLFV (sensorless flux vector)
Speed Range	1:10
Motor Protection	Class 10 electronic overload protection
Keypad/Display Terminal	4 segment, LED display with Run and Units LED indication. Run/ Stop, Local/ remote (with LED indication), and programming buttons. Quick Start, Fault History, I/O mapping, Last-used menus. Status Monitoring and self diagnostics with fault messages and status such as: Power on time, elapsed time, motor run time, line voltage, motor current, ready to run, running, motor speed, etc.
Compliance	RoHS
Codes and Standards	UL, CSA, NOM 117, DNV, CE, C-Tick, HPST, UL 1995 Plenum rated

Environmental

Temperature	Storage: -13 to +158 °F (-25 to +70 °C) Operation: +14 to +104 °F (-10 to +40 °C) without derating, +14 to +122 °F (-10 to +50 °C) with derating
Humidity	95% with no condensation or dripping water, conforming to IEC 600068-2-3.
Altitude	Up to 3,300 ft (1,000 m) without derating; derate by 1% for each additional 330 ft (100 m) up to 10,000 ft (3,000 m) Limit to 6,600 ft (2,000 m) if supplied by corner grounded distribution system
Enclosure Rating	• NEMA/UL open type (IP20) with top vent cover removed. • NEMA/UL Type 1 with the top vent cover in place and with the Conduit Entry Kit installed • IP21 and IP41 and on top of drive controller
Pollution Degree	1 HP to 25 HP @ 200/240 V, 1 HP to 5 HP @ 380/480 V: Pollution degree 2 per IEC/EN 61800-5-1, 30 HP to 40 HP @ 200/240 V, 30 HP to 100 HP @ 380/480 V: Pollution degree 3 per IEC/EN 61800-5-1
Vibration Resistance	1.5 mm peak to peak from 3 to 13 Hz, 1 gn from 13 to 150 Hz, conforming to IEC/EN 60068-2-6
Shock Resistance	15 gn for 11 ms conforming to IEC/EN 60068-2-27

IP54 Drives

The efficiency of Telemecanique® branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your automation and control applications requirements.

Simple machines
Altistart® 01: 0.25 HP to 75 HP
Altivar® 11: 0.25 HP to 3 HP
Altivar 31: 0.25 HP to 20 HP

Complex, high power machines
Altivar 71: 0.5 HP to 700 HP

Pumping and ventilation machines
Altistart 48: 3 HP to 1200 HP
Altivar 21: 1 HP to 100 HP
Altivar 61: 1 HP to 900 HP

A worldwide presence

Schneider Electric is a global supplier of electrical distribution, automation and control equipment products under the brand names of Square D®, Telemecanique and Merlin Gerin®. For over 100 years, Schneider Electric has been an innovator in manufacturing products that are tailored to the demanding specifications of our customers. Backed by a global organization of 80,000 employees in 130 countries, Schneider Electric is a global electrical industry leader. With one of the strongest distribution networks in the U.S. and around the world, you can count on Schneider Electric to keep your business running smoothly and efficiently.

Schneider Electric has been providing adjustable frequency drive solutions for HVAC and pumping applications for over 30 years. Schneider Electric has made a significant investment in research and development to design in a new generation of products to serve the HVAC and pumping marketplace.
