groov

Features

- Compact industrial Internet of Things (IoT) appliance suited to harsh environments at the network’s edge
- Industrial hardware with web-based, Internet-standard software to build your IoT projects
- groov View for browser-based data visualization, monitoring, and control from any brand computer or mobile device
- Node-RED for rapid application development and data handling
- Ignition Edge for connectivity using OPC UA and MQTT
- Security with TLS/SSL encryption plus username/password authentication

DESCRIPTION

The groov Box edge appliance (groov) is Opto 22’s Internet of Things (IoT) and operator interface appliance that provides visualization, data handling, and connectivity to automation systems, software, databases, and devices of all kinds—all in a compact, industrially hardened box suited to the edge of the network.

Visualization: From pumps and processes, to production data, to the weather, your world is full of things you need to view, monitor, or control. With browser-based groov View, you can easily build an operator interface to see and interact with exactly what you need. Show data from sensors and automation systems, cloud applications, databases, web services, and more. Securely view the interface you build on any brand device, from a smartphone to a computer to a web-enabled big-screen TV.

To build your interface, just drag, drop, and tag. No tag limits; no user licenses required. Set up authorized users and groups. Define events based on one or more conditions, and automatically alert selected personnel anywhere when events occur. groov can augment existing human-machine interfaces (HMIs) and SCADA systems by making specific data visible to authorized users at any time and in any location.

Data Handling: The key to IoT usefulness is getting the data out of where it’s trapped and into the systems and software where it’s needed. With groov, you can use standard Internet and IT-compatible tools to manipulate and move data between things in the real world and computer systems and software on premises or in the cloud.

Key tools are built into groov and ready for use: Node-RED, an IoT rapid application development environment; RESTful APIs to groov Data Stores; and Ignition Edge with OPC UA and MQTT/Sparkplug. You can place the secure groov Box appliance at the network’s edge in harsh industrial environments and know you have the tools right there to acquire data, move it, and act on it.

Connectivity: groov simplifies the connections you need to accomplish your IoT goals. Connect to all kinds of devices and systems to monitor and control them and move data between them.
- Connect directly to Modbus/TCP devices and Opto 22 SNAP PAC controllers to access their data.

• Use Node-RED (included) to create logical flows for data. Exchange data with cloud applications, IoT platforms, on-premises databases, and external web services. Also connect to serial devices—Modbus RTU/ASCII, weigh scales, and more—via a USB-to-serial converter and Node-RED.

• Use our secure RESTful API from your database, cloud service, or business application to place data in or read data from a groov Data Store, where you can access it for your use.

• (Requires groov Enterprise) Connect to PLCs and PACs from other automation manufacturers using OPC UA:
  – With the internal Ignition® Edge server and drivers, connect to Allen-Bradley® and Siemens® PLC systems, plus others.
  – With an external OPC-UA server such as Kepware Technologies’ KepServerEX®, connect to any system or database your server and drivers support.

• (Requires groov Enterprise) Publish and subscribe data from devices connected to the groov Box to brokers, using the lightweight MQTT transport protocol with Sparkplug payload. MQTT creates a high-performance communications architecture ideal for getting the data that’s trapped behind firewalls into SCADA software like Ignition Enterprise.

groov brings data from process control, OEM machines, manufacturing and building systems, and the Internet of Things (IoT) to the people and systems that need it.
WHAT’S IN THE BOX

The groov Box edge appliance includes:

**groov View**—an easy-to-use tool for building and using your own custom operator interface to the sensors, data, devices, and systems you need to see, monitor, and control. The browser-based interface you build can be viewed on any brand smartphone, tablet, laptop, computer, or even a web-enabled HDTV. Includes trending, event logging, and operator notifications.

**Node-RED**—an open-source, multi-platform software tool for wiring together databases, cloud applications, and APIs to produce IoT applications quickly and inexpensively. Through Node-RED the groov Box can also use a USB-to-serial converter with FTDI chipset to connect to serial devices like weigh scales, Modbus RTU/ASCII devices, and more.

**Ignition Edge** (requires a groov Enterprise license)—a product of Inductive Automation®. Ignition Edge provides an internal OPC-UA server and drivers for connecting to Allen-Bradley® and Siemens® PLCs, Modbus/TCP devices, and other systems. Also included is an MQTT Transmission module, so you can use the lightweight MQTT protocol with Sparkplug payload in your IoT applications.

**groov Admin**—a utility application for configuring networks and security, backing up and restoring your groov and Node-RED projects, using Node-RED, configuring Ignition Edge, updating groov software, and viewing system status.

With all these IoT tools in the same box, your IoT application is easier to configure and security is streamlined. To make sure you have all the features you need, see “groov Feature comparison” on page 4.

WINDOWS PC-COMPATIBLE OPTION

If you already have a Microsoft® Windows® PC and want to use it for your IoT projects, you can get groov Server for Windows (part number GROOV-SVR-WIN-BASE) instead of the groov Box.

groov Server for Windows includes groov View software for building and viewing operator interfaces. It comes ready for installation on a Windows PC, and once installed, runs as a service on your computer.

You will need to download your own IoT software, such as Node-RED (available from nodered.org) and Ignition Edge (available from Inductive Automation), and provide security.

Licenses for groov are similar on groov Server for Windows (see “groov Feature comparison” on page 4). To use an OPC-UA server, you’ll need to purchase groov Enterprise. Once purchased, you can use Ignition Edge or another OPC-UA server, such as Kepware Technologies’ KEPServerEX® communication platform. If you use Ignition Edge,

email Opto 22 at pcs@opto22.com for an Edge license key. In the email, include your PC’s MAC address.

SECURITY

When you’re sending and receiving data to automation equipment and devices, security is critical. In addition to the security you provide in your network and firewall, groov offers four important ways to keep your data safe.

**Encryption.** All communications between your users and the groov Box are encrypted using the latest TLS/SSL methods. This is the same encryption your bank uses.

**Authentication.** Usernames and passwords (or API keys for software users) are required for all users and are set up in groov by an Admin user. Make sure your users understand the importance of keeping their passwords and API keys secret.

**Access limitations.** In groov View, security levels for users (Admin, Editor, Operator, and Kiosk User) determine what each of your users can and cannot see and do in the operator interface. You also have the option to hide gadgets for users on phones while showing them to users on desktops and tablets, or vice versa.

In addition, you can assign your users to groups and limit each group’s access to specific pages in your groov interface. For example, pages for a group called Supervisors could show KPIs for production, while pages for a group called Operators might include controls.

**Passcodes for mobile apps.** If you use the free mobile device apps groov View for iOS and groov View for Android, you can also set up a passcode. Even if an unauthorized person has the phone or tablet, they have to know the passcode to see the groov interface.

**groov LICENSES**

Three groov licenses are available: Base, Plus, and Enterprise. See the following table for features included in each, and choose the part number combination that gives you the features you need.

groov VIEW: BUILD AND VIEW YOUR INTERFACE

groov Build provides a library of pre-built gadgets for developing a graphical operator interface. It comes with the built-in ability to import and use tags from a variety of systems and equipment, including Modbus/TCP devices, Opto 22 SNAP PAC controllers, and many other manufacturers’ systems, equipment, and databases. You also use groov Build to manage user accounts and set up email or text message event notifications.

groov View presents a groov operator interface that resides on a groov Box or groov Server. The interface is accessed using any device with a web browser and a network connection to groov, or on the free groov View app on an iOS or Android smartphone or tablet.

Using Gadgets

To build your project, you use groov’s ready-made gadgets. Here are just a few examples; many other gadgets are included:

- A Round Gauge displays a value using a rotating needle and decimal numerical display.
- A Command Button sends a command.
- A Slider adjusts a variable.
- A Trend shows how variables change in real time.

To set up a gadget, you import tags from your system or device, select one of the tags from your tag database, and then associate it with a gadget available for that tag. Once you have set gadget-specific properties and saved your project, a gadget is immediately ready to use in View.

A number of gadgets give you display choices. For example, a button can be skinned with an image. Or a link to another page or a URL can appear as a text link, a button, or an image. The Image Indicator gadget uses multiple images to display current status or value.

Gadgets and text in your interface default to usable sizes and colors, so you can build it rapidly. But you also have full control over graphic and text sizes and appearance. You can alter layouts to suit a PC/tablet or a smartphone. You can also brand your operator interface with your own logo and colors.

Changing the interface is as easy as building it, and changes are immediately visible to users as soon as they refresh their screens.

Image Library

All images used in your groov project are stored in the Image Library. The same image can be used in multiple places, and if you change the image, it is updated everywhere it is used.
It’s easy to add images to the Library or delete them when no longer needed. The Image Library accepts many kinds of image files, including photos, drawings, and logos with file types BMP, GIF, PNG, JPG, and SVG. For each image, the Library includes the image itself plus filename, size, and date added. You can also add notes if you wish.

Many useful drawings (manufacturing, processing, building, and commercial equipment; field sensors and devices; and much more) are available in our free SVG Image Library on groov.com (choose Support > SVG Image Library). Select the drawing you want, choose colors, rotate if necessary, and download it ready to use in your groov interface.

**Event Logging and Notifications**

groov logs events you configure, and you can view the current status of events as well as the event log. You can sort and filter what you want to see in the log and also download it as a text file. The log holds 200 MB of the most recent events (typically over a million entries).

Each event you configure is based on one or more conditions, such as a value equal to a value you specify, or a value outside a range you determine. When you set up multiple conditions for one event, the event can be configured to occur when all of them are true or when any one is true.

You can also choose to alert selected personnel when an event occurs. These event-based notifications are sent via email (or text message, through most carriers).

Event messages can be customized and sent to groups or individuals. Messages can include equipment data, time/date stamps, other key information, and even links back to the groov operator interface for one-click access to real-time, visual data for further investigation.

For example, if a machine overheats, stops working, or otherwise meets or exceeds one or more predefined criteria, a maintenance technician can receive a notification and click right to the groov screen for more data.

With email available at almost any time or location thanks to mobile devices such as smartphones, notifications can get critical data into the right hands right away.

**Trending**

Trending in groov is real time, but can extend over a long period of time. When you create a trend, you choose Classic or Interactive. Both types of trends can include up to 4 pens on 2 axes.

- **Classic** trends show up to 7 days’ worth of data.

The groov Box or groov Server for Windows logs the events you configure.

See, sort, filter, and download the Events Log in groov View or groov Build.
• Interactive trends can show much more data over a period of up to 5 years, with the ability to zoom in on a smaller set of data to see details.

Trend data can be downloaded for logging.

Mobile Device Apps

groov View for iOS and groov View for Android are free native apps for your tablet or smartphone. You can run groov in your browser, but these apps display your interface in full-screen mode.

These native apps add other advantages as well. You can add another layer of security by setting up passcodes in the app. If you have more than one groov, you can easily access all of them from the app. The iOS app is also ideal for OEMs and machine builders who want to use a tablet as an operator interface to a machine. You can lock the device so it runs only groov.

Get groov View for iOS.
Get groov View for Android.

NODE-RED

Included in your groov Box is Node-RED, an open-source software program you can use to wire together devices, databases, cloud applications, and APIs (application program interfaces) with simple logic flows. Many people use Node-RED for Internet of Things (IoT) applications.

Node-RED provides engineers with an easy way to connect edge computing systems, such as industrial automation controllers, to cloud services such as Amazon Web Services™ (AWS) IoT, IBM Watson IoT™, and Microsoft® Azure®.

In Node-RED you connect prebuilt nodes (provided by device manufacturers or software developers) together to make a flow. The flow provides the logic to accomplish your goal. You can also add function nodes containing JavaScript.

Because Node-RED is a general-purpose programming environment, you have the freedom to create the flows you like using any nodes you choose. Opto 22 SNAP PAC nodes, groov nodes, and a wide variety of other nodes are easy to install.

For more information about Node-RED and code samples to help you get started, see developer.opto22.com and our Node-RED OptoForum.

IGNITION EDGE

(groov Enterprise license required.) Ignition Edge in the groov Box gives you two key connectivity pieces for your IoT applications: OPC UA and MQTT/Sparkplug, with up to 500 configured tags.

OPC UA

Included with Ignition Edge in the groov Box are an internal OPC-UA server and drivers for some of the most popular automation PLCs and devices: Allen-Bradley, Siemens, and Modbus, as well as SNAP PACs.

That means you do not have to buy, configure, and maintain an industrial PC in order to view and act on data from these systems. Because the groov Box is built for industrial use, you can place it where you need it—in harsh environments or remote locations—and have the tools you need right there.

The following OPC-UA drivers are included with Edge in the groov Box:

Allen-Bradley PLCs:
• Logix
• SLC
• PLC-5®
• MicroLogix™

Siemens PLCs:
• S7-300
• S7-400
• S7-1200
• S7-1400
• S7-1500

Modbus/TCP devices
• Devices that support Modbus RTU over TCP
• Other drivers you have purchased

MQTT

Also included with Ignition Edge is an MQTT Transmission module. MQTT (Message Queue Telemetry Transport) MQTT is a publish/subscribe (pub/sub) protocol that’s suited to many IoT applications because of its architecture.

In a pub/sub architecture, a central source, called a broker, stores all data. MQTT clients can publish data to the broker or subscribe to get data from it (or both). Clients who publish data send it only when the
data changes. Clients who subscribe to data automatically receive it from the broker only when it changes.

Contrast this with a client/server architecture. There the client and server must be connected, because the client requests data directly from the server. The client doesn’t know when the data changes, so it must request it at regular intervals.

MQTT pub/sub offers three main advantages over client/server for IoT applications:

- Network traffic is reduced overall, because data is published and sent only when it changes, rather than at regular intervals.
- Because the broker is a central source with stored data, servers don’t have to strain to serve multiple clients. And even remote devices with irregular connections or low bandwidth can publish or subscribe to data. If a subscriber is off line, for example, the broker buffers the data and sends it at a later time.
- For data publishers, there’s another important advantage: data is published using an outbound connection. Most firewalls block inbound traffic (for example, an external OPC client requesting data from an internal OPC server), but they allow outbound connections over secure TCP ports.

With MQTT in the groov Box, you can use the Sparkplug payload specification. Sparkplug defines the messages that move over MQTT and gives you a way to make sure that data from remote devices and applications is current and valid.

With both OPC UA and MQTT/Sparkplug in the groov Box, you can move data to and from A-B, Siemens, Modbus, and SNAP PAC systems in a non-intrusive way, without requiring an industrial PC, additional firewalls, or expensive network connections.

Note that you must have a groov Enterprise license (GROOV-LIC-ENT) to use Ignition Edge and MQTT with Sparkplug.

**DATA SIMULATOR**

A Data Simulator built into groov provides simulated dynamic and fixed values for onscreen gadgets, so you can explore or test before connecting to real-world systems and equipment.

For instance, a Graph gadget can use a simulator tag that provides changing values for a sine wave, or a gauge can use a simulator tag with an integer moving between high and low values.

This feature can help test onscreen gadgets or simulate tags and variables during screen development.

**DATA STORE**

Another way to visualize and use data from IoT devices, databases, cloud services, and more in your groov operator interface is to use a Data Store. You can create a Data Store device in groov and securely place or access data there using the Data Store’s RESTful API and the programming language of your choice.

Your groov users can then view, control, see trends, and receive notifications on this data. You can also use Node-RED as an easy way to wire these data sources together.

**TRY BEFORE YOU BUY**

See the Demo

See groov in action at demo.groov.com. Log in using the username trial and password opto22

Explore the demo and then download the groov Demo Project for examples and help building your own interface elements.

Try it yourself

A fully functional version of groov Server for Windows is available to download and try so you can see your system data on a smartphone, tablet, or computer. Connect to a Modbus/TCP device, SNAP PAC controller, or groov Data Store; or use the built-in Data Simulator to evaluate groov without connecting to a live machine or system.

If you want to connect to real data from an external OPC-UA server and don’t have one, Kepware Technologies’ KEPServerEX® communication platform is available for trial at www.kepware.com.

To try groov, download and install groov Server for Windows from groov.com. Simple instructions walk you through software setup, connecting to one or more systems, and building a simple interface so you can quickly see realtime data on a mobile device.

**NOTE:** You must log into your computer as an administrator to install groov Server for Windows.

groov Server operates for two hours without a license key. You can restart it as needed. When you purchase groov, the project you built during the trial will continue to work. You can also develop your groov operator interface on groov Server and later move your project to a groov Box, or vice versa.
SYSTEM REQUIREMENTS

To build operator interfaces with groov, you’ll need:

- Any computer with a web browser (does not have to be a Windows PC)
- One or more of the following:
  - A Modbus/TCP device
  - A database, online service, or software program to get data from or put data into a Data Store using the groov API
  - An Opto 22 SNAP PAC controller (SNAP PAC S-series, R-series, or SoftPAC, with firmware R9.2a or newer), running a PAC Control strategy
  - A database, cloud application, API, or serial device accessible via a Node-RED node. (Serial device requires a USB-to-serial converter with FTDI chipset, groov Admin R1.570.46 or higher, and Node-RED for groov Box version 3 or higher.)
  - (groov Enterprise license required) OPC UA-compatible automation system or equipment. Ignition Edge supplies an internal server and drivers for the groov Box. Additional drivers or an external OPC-UA server may be required for your equipment.

**groov Server for Windows**

To install and run groov Server for Windows, you'll need:

- A PC on the same network as your control device, with one of the following Microsoft operating systems. If you're using an OPC-UA server, it can be the same or a different computer.
  - Windows® 10, 8, or 7 Professional (32-bit or 64-bit)
  - Windows Server® 2012 or Windows Server 2008 R2

*NOTE: .NET Framework 3.5 or greater is required for all operating systems. Use the “Add roles and features” option for Windows Server 2012.*

- A minimum of 250 MB available disk space to install groov Server for Windows. Additional disk space is required for the project you build.

If you are using groov Server to build an interface for an OPC UA compatible system and don't have an OPC UA server installed, the KEPServerEX communication platform from Kepware Technologies is recommended by Opto 22 and tested to work with groov. For more information: [www.kepware.com/Products/products_OPSCervers.asp](http://www.kepware.com/Products/products_OPSCervers.asp). Also see: [www.kepware.com/Support_Center/doc_auto_tag.asp](http://www.kepware.com/Support_Center/doc_auto_tag.asp)
