High-Precision Digital Pressure Switch

Series ZSE40(F)/ISE40

With anti-chattering function

The pressure values measured within the response time that are selected by the user are averaged. By comparing this average pressure value with the set pressure value, switch output is determined.

With auto shift function

Able to transmit the output signal of a switch by not reflecting the fluctuations of the supply pressure.

Compound pressure (ZSE40F)

Able to detect the adsorption confirmation pressure (for vacuum pressure) and the vacuum release pressure (for positive pressure) with one pressure switch.

3 types of piping

A wide variety of piping allows installation in various locations.

Repeatability

±0.2% F.S. ±1 digit or less

IP65 compliant

Dusttight, Low jetproof type

For panel mount

Dedicated adaptor makes it easier to assemble in a panel-mount application.

Function

Various additional functions are available for easy measurement, switch operation and confirmation of measured values suitable for the conditions of the measured fluid.

**Auto shift function** [Note 1] Can correct the pressure set point value of switch output according to fluctuations in the primary pressure.

**Anti-chatter function** Prevents possible malfunction due to sudden fluctuations in the primary pressure by adjusting the response time.

**Key lock function** Key operation can be locked to prevent any incorrect function of the operation switch.

**Peak hold function** [Note 2] Can retain the maximum pressure value displayed during measurement.

**Bottom hold function** [Note 2] Can retain the minimum pressure value displayed during measurement.

**Zero-out function** The pressure display can be set to zero when the pressure is open to the atmosphere.

**Unit conversion** [Note 1] Can convert the display value.

Note 1) Select and order by specifying the types and models.

Note 2) Display blinks when using the peak and bottom hold functions.
Series ZSE40/L/ISE40

Calibration Procedures

Setting procedure

Initial setting
Set "Output mode", "Response time" and "Auto or Manual mode".

Manual pressure setting
Enter the set value of the pressure to perform switch output.

Auto preset
Automatically sets the pressure for the adsorption confirmation or supply pressure confirmation.

Zero-out
Adjusts the zero point of the atmospheric pressure.

Manual pressure setting
Allows to fine-tune the data set automatically by auto preset.

Key lock mode
Mode is not switched, even if the button is pressed during operation.

Normal operation
Measured pressure displayed, switch operation occurs.

Description

3 1/2-digit LED
Displays present pressure.
Displays each mode.
Displays error code.

LED (Green)
Displays OUT1 operation condition
ON: When output is ON.

UP button
Switching of the mode and set value

LED (Red)
Displays OUT2 operation condition
ON: When output is ON.

DOWN button
Switching of the mode and set value

SET button
Switching to each mode and fixing the set value
Note: When in hysteresis mode and window comparator mode, setting is determined automatically by comparing the small and large set pressure values P1, P2 (n1, n2).

Dimensions

Panel mounting

Panel fitting dimension

Panel mount + Front protective cover

Panel thickness: 1 to 3.2 mm
**Methods of Connecting Pipe**

When connecting a hexagon socket plug or fitting on the pressure port, fix the hexagon part of the pressure port, applying a 12 mm width wrench and fasten with the torque of 8.8 N·m or less. -W1 type has a removable pressure port base and can change the orientation of inducing pressure.

**Assembly of Mounting Bracket**

When installing a mounting bracket on -01 or -W1 type, use stainless steel cross-recessed head machine screws: M3 x 5L (2 pcs.) The tightening torque should be 0.98 N·m or less.

When installing a mounting bracket on -C4, -C6, -M5, -W1 or -WF1 type, use stainless steel cross-recessed head machine screws: M4 x 5L (2 pcs.) The tightening torque should be 0.98 N·m or less.

**Error Correction**

Take the following corrective solutions when errors occur.

<table>

* After displaying for approx. 1 second, it returns to the measurement mode.
With Auto Shift Function

Auto shift function
Assuming the measured pressure at the time of auto shift input to be the standard pressure value, it functions to compensate the set value of switch output 1 "P₁₂" or "n₁₂" and "P₂₂" or "n₂₂", and the set value of switch output 2 "P₃₃" or "n₃₃" and "P₄₄" or "n₄₄".

When the auto shift is used:
At the point when the supply pressure fluctuates, and if the auto shift input is set at "L₁", the pressure at the time is saved and the set pressure is to be compensated by that value to enable correct function.

Auto shift function
• Keep the pressure for 5 ms or more, after the trailing edge signal of auto shift input.
• When the auto shift is activated, display panel shows "LLLL" for approx. 1 second, and the pressure value at that point is memorized to be as a compensation value "LLLL".
• The memorized compensation value makes the set value "P₁₂" to "P₂₂" or "n₁₂" to "n₂₂" to be compensated.
• Time between the auto shift input and switch output activation is 10 ms or less.
• When the set value compensated by the auto shift input exceeds the possible set range, compensation value is not saved. When the value exceeds the upper limit, "LLLL" is displayed, whereas, "LLLL" is displayed when it is below the lower limit.
• The compensation value "LLLL" immediately after the auto shift function disappears when the power supply is turned off.
• The compensation value "LLLL" for the auto shift function is reset to zero (initial value) when the power source is applied once again.

EEPROM is not used to store the compensation value.

Analog Output
Applicable model number: ZSE40(F)/ISE40-(F)-22/62(L)-(M)
Series ZSE40/ISE40
Made to Order Specifications

Please consult SMC for detailed dimensions, specifications and delivery.

1. Extended auto shift specifications
When the auto shift is activated and the compensated set value exceeds the regulating pressure range, the set value is automatically adjusted within the regulating pressure range. Either 1 output (OUT 2 only) or 2 outputs (OUT 1 and 2) are available for the auto shift activation.

How to Order
ISE40/ZSE40(F) – (L) – M – X119

Piping specifications *
Input/Output specifications *

External dimensions are the same as those of standard products.

2. Space saving specifications
Product has larger allowable space for installing a panel mount, etc. by making a small the mold of an electrical entry beneath the housing.

* This product is rated for IP40 enclosure. (Standard product is IP65.)

[Standard products] [This special product (X129)]
**Series ZSE40/ISE40**

**Specific Product Precautions**
Be sure to read before handling. Refer to front matters 58 and 59 for Safety Instructions and pages 687 to 691 for Pressure Switch Precautions.

### Wiring

**Caution**

1. When using a switching regulator on the market, make sure to ground the FG terminal.

### Operating Environment

**Warning**

1. Although this pressure switch is CE conformed product, it does not resist surges resulting from electrical storms. Please take proper precautions to prevent damage to equipment.

**Caution**

1. Please do not use in an environment where oil or solvent is splashed.
2. In places where the switch main body is splashed by water or dust, etc, may enter the switch through the atmospheric release port. Please insert ø4 tube (I.D. ø2.5) into the atmospheric release port and connect the opposite end to a cleaner environment where water, etc is not splashed. Please do not bend the tube or block the hole, this could lead to incorrect pressure measurement.

### Other

**Caution**

1. Immediately after the electric power is supplied, some drifting, as much as ±0.5% F.S., takes place. When used for micro pressure, allow it to warm up for about 20 to 30 minutes.

---

**Regulating pressure range and rated pressure range**

Set the pressure within the rated pressure range.

The rated pressure range is the range of pressure that is possible in setting.

The regulating pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the sensor.

Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the regulating pressure range.
