MODEL PAXLT - PAX LITE TEMPERATURE METER

GENERAL DESCRIPTION

The PAXLT is a versatile meter that accepts a variety of thermocouple and RTD inputs and provides a temperature display in Celsius or Fahrenheit. The readout conforms to ITS-90 standards, with 1° or 0.1° resolution. The 5-digit display has 0.56” high digits with adjustable intensity. Backlight overlay labels for °F and °C are included.

The meter features a Maximum and Minimum reading memory, with programmable capture time. The capture time is used to prevent detection of false max or min readings which may occur during start-up or unusual process events. Either value can be displayed if desired. The display can be toggled manually or automatically between the selected values.

Other features include thermocouple cold junction compensation, display offset and a programmable user input to perform a variety of meter control functions. Two setpoint outputs are provided, each with a Form C relay. Output modes and setup options are fully programmable to suit a variety of control requirements.

The PAXLT can be universally powered from a wide range of AC or DC voltage. The meter has been specifically designed for harsh industrial environments. With a NEMA 4X/IP65 sealed bezel and extensive testing to meet CE requirements, the meter provides a tough yet reliable application solution.

SAFETY SUMMARY

All safety regulations, local codes and instructions that appear in this and corresponding literature, or on equipment, must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

SPECIFICATIONS

1. DISPLAY: 5 digit, 0.56” (14.2 mm) intensity adjustable Red LED
2. POWER REQUIREMENTS:
   - AC POWER: 50 to 250 VAC 50/60 Hz, 12 VA
   - Isolation: 2300 Vrms for 1 min. to all inputs and outputs
   - DC POWER: 21.6 to 250 VDC, 6 W
   - DC Out: +24 VDC @ 100 mA if input voltage is greater than 50 VAC/VDC
   +24 VDC @ 50 mA if input voltage is less than 50 VDC
3. READOUT:
   - Display Range: -19999 to 99999
   - Scale: °F or °C
   - Resolution: 1° or 0.1°
   - Response Time: 500 msec min.
   - Display Overrange/Underrange Indication: “…...” / “-...-”
   - Input Overrange/Underrange Indication: “OL” / “-OL-”

*After 20 min. warm-up. Accuracy is specified in two ways: Accuracy at 23°C and 15 to 75% RH environment; and Accuracy over a 0 to 50°C and 0 to 85% RH (non-condensing) environment. Accuracy specified over the 0 to 50°C operating range includes meter tempco effects.

6. USER INPUT:

- **Programmable input**
- Software selectable for active logic state: active low, pull-up (24.7 KΩ) or active high, pull-down resistor (20 KΩ).
- **Trigger levels:** \( V_{IL} = 1.0 \text{ V max} \); \( V_{IH} = 2.4 \text{ V min} \); \( V_{MAX} = 28 \text{ VDC} \)
- **Response Time:** 10 msec typ.; 50 msec debounce (activation and release)

7. MEMORY:

- Nonvolatile E²PROM retains all programming parameters and max/min values when power is removed.

8. OUTPUTS:

- **Type:** Dual Form C contacts
- **Isolation to Sensor & User Input Commons:** 1400 Vrms for 1 min.
- **Working Voltage:** 150 Vrms
- **Contact Rating:** 5 amps @ 120/240 VAC or 28 VDC (resistive load), 1/8 H.P. @ 120 VAC (inductive load)

Life Expectancy: 100 K cycles min. at full load rating. External RC snubber extends relay life for operation with inductive loads.

Response Time: Turn On or Off: 4 msec max.

9. ENVIRONMENTAL CONDITIONS:

- **Operating temperature:** 0 to 50°C
- **Storage temperature:** -40 to 70°C
- **Operating and storage humidity:** 0 to 85% RH (non-condensing)
- **Vibration According to IEC 68-2-6:** Operational 5 to 150 Hz, in X, Y, Z direction for 1.5 hours, 2 g's.
- **Shock According to IEC 68-2-27:** Operational 30 g's (10 g's relay), 11 msec in 3 directions.
- **Altitude:** Up to 2000 meters

10. CONNECTIONS:

- High compression cage-clip terminal block
- **Wire Strip Length:** 0.3” (7.5 mm)
- **Wire Gage:** 30-14 AWG copper wire
- **Torque:** 4.5 inch-lbs (0.51 N-m) max.

11. CONSTRUCTION:

- This unit is rated for NEMA 4X/IP65 outdoor use. IP20 Touch safe. Installation Category II, Pollution Degree 2. One piece bezel/case. Flame resistant. Synthetic rubber keypad. Panel gasket and mounting clip included.

12. CERTIFICATIONS AND COMPLIANCES:

- **SAFETY**
  - Type-1X Enclosure rating (Face only), UL50 IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part 1.
  - IP20 Enclosure rating (Rear of unit), IEC 529
  - For Model No. PAXLT0U0 Only: UL Listed, File # E137808, UL508, CSA C22.2 No. 14-M95
  - LISTED by Und. Lab. Inc. to U.S. and Canadian safety standards

- **ELECTROMAGNETIC COMPATIBILITY**
  - Emissions and Immunity to EN 61326: Electrical Equipment for Measurement, Control and Laboratory use.
  - Immunity to Industrial Locations:
    - Electrostatic discharge EN 61000-4-2: Criterion A
    - 4 kV contact discharge
    - 8 kV air discharge
    - Electromagnetic RF fields EN 61000-4-3: Criterion B
    - 10 V/m
    - Fast transients (burst) EN 61000-4-4: Criterion B
    - 2 kV power
    - 1 kV signal
    - Surge EN 61000-4-5: Criterion A
    - 1 kV L-L, 2 kV L-N-E power
    - RF conducted interference EN 61000-4-6: Criterion B
    - 3 V/μs

- **Emissions:**
  - Emissions EN 55011: Class A

Notes:
1. **Criterion A:** Normal operation within specified limits.
2. **Criterion B:** Temporary loss of performance from which the unit self-recover.

13. **WEIGHT:** 10.4 oz. (295 g)
1.0 INSTALLING THE METER

Installation

The PAX Lite meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approximately 7 in-lbs [79N-cm]). Do not over-tighten the screws.

Installation Environment

The unit should be installed in a location that does not exceed the maximum operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.

The bezel should be cleaned only with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

2.0 SETTING THE JUMPER

INPUT RANGE JUMPER (RTD ONLY)

This jumper is used to select the proper input range for the RTD probe being used (10 ohm or 100 ohm). For thermocouple inputs, this jumper has no effect and can be left in either position.

To access the jumper, remove the meter base from the case by firmly squeezing and pulling back on the side rear finger tabs. This should lower the latch below the case slot (which is located just in front of the finger tabs). It is recommended to release the latch on one side, then start on the other side latch.

3.0 WIRING THE METER

WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter’s voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

When wiring the meter, compare the numbers embossed on the back of the meter case against those shown in wiring drawings for proper wire position. Strip the wire, leaving approximately 0.3" (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.)

EMC INSTALLATION GUIDELINES

Although this meter is designed with a high degree of immunity to Electro-Magnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into the meter may be different for various installations. The meter becomes more immune to EMI with fewer I/O connections. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation.

Listed below are some EMC guidelines for successful installation in an industrial environment.

1. The meter should be properly connected to protective earth.
2. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application.
**3.1 POWER WIRING**

**Power**
- Terminal 1: VAC/DC +
- Terminal 2: VAC/DC -

---

**3.2 INPUT SIGNAL WIRING**

**CAUTION:** Sensor input common (Terminal 7) is NOT isolated from user common (Terminal 9). In order to preserve the safety of the meter application, the sensor input common must be suitably isolated from hazardous live earth referenced voltages; or input common and user common must be at protective earth ground potential. If not, hazardous live voltage may be present at the user input and user common terminals. Appropriate considerations must then be given to the potential of the sensor input common and the user common with respect to earth ground.

### 4.0 Reviewing the Front Buttons and Display

![Diagram of display and buttons]

- **Display Readout Legends**: This section lists various symbols used in the display to indicate different statuses and functions.

#### BUTTON DISPLAY MODE OPERATION
- **PAR**: Access Programming Mode
- **SEL**: Index display through enabled values
- **RST**: Resets values (min/max) or outputs

#### PROGRAMMING MODE OPERATION
- Store selected parameter and index to next parameter
- Advance through selection list/select digit position in parameter value
- Increment selected digit of parameter value

### OPERATING MODE DISPLAY DESIGNATORS
- **MAX**: Maximum display capture value
- **MIN**: Minimum display capture value
- "SP1" - Indicates setpoint 1 output activated.
- "SP2" - Indicates setpoint 2 output activated.

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

### 5.0 Programming the Meter

#### OVERVIEW

**PROGRAMMING MENU**

- **Signal Input Parameters**
- **Secondary Function Parameters**
- **Display and Front Panel Key Parameters**
- **Setpoint Output Parameters**

#### PROGRAMMING MODE ENTRY (PAR BUTTON)

It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing the **PAR** button. If it is not accessible, then it is locked by either a security code or a hardware lock.

#### MODULE ENTRY (SEL & PAR BUTTONS)

The Programming Menu is organized into four modules. These modules group together parameters that are related in function. The display will alternate between **Pr** and the present module. The **SEL** button is used to select the desired module. The displayed module is entered by pressing the **PAR** button.

#### MODULE MENU (PAR BUTTON)

Each module has a separate module menu (which is shown at the start of each module discussion). The **PAR** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pr**. Programming may continue by accessing additional modules.

#### SELECTION / VALUE ENTRY

For each parameter, the display alternates between the present parameter and the selections/value for that parameter. The **SEL** and **RST** buttons are used to move through the selections/values for that parameter. Pressing the **PAR** button stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, the value is displayed with one digit flashing (initially the right most digit). Pressing the **RST** button increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will select the next digit to the left. Pressing the **PAR** button will enter the value and move to the next parameter.

#### PROGRAMMING MODE EXIT (PAR BUTTON)

The Programming Mode is exited by pressing the **PAR** button with **Pr** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

#### PROGRAMMING TIPS

It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

#### FACTORY SETTINGS

Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

#### ALTERNATING SELECTION DISPLAY

In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter’s Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.
5.1 MODULE 1 - INPUT SETUP PARAMETERS (I-1NP)

**PARAMETER MENU**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>

</tr>
<tr>
<td>tc-b</td>
<td>B</td>
</tr>
</tbody>
</table>

Select the thermocouple or RTD type used for the application. For RTDs, position the Input Range Jumper to match the RTD type (10Ω or 100Ω). Selecting \( \text{VOLT} \) displays a millivolt signal readout with 10 μV resolution.

**COLD JUNCTION COMPENSATION**

| CJC | ON | OFF |

This parameter enables or disables internal cold junction compensation for thermocouples. For most applications, cold junction compensation should be enabled (ON). This parameter only appears for thermocouple input selections.

**TEMPERATURE SCALE**

| SCALE | F | C |

Select the desired temperature scale. This selection applies for the Input, MAX and MIN displays. This parameter does not appear when mV or RTD resistance display is enabled.

**DISPLAY DECIMAL POINT**

| dECPE | 0 | 00 |

Set the decimal point for the desired display resolution. This selection applies for the Input, MAX and MIN displays, and also affects the Setpoint and Display Offset values. For mV or RTD resistance displays, the decimal point location is fixed and this parameter does not appear.

**DISPLAY OFFSET VALUE**

| OFSET | -19999 to 19999 |

The temperature display can be corrected with an offset value. This can be used to compensate for probe errors, errors due to variances in probe placement or adjusting the readout to a reference thermometer.

**FILTER SETTING**

| FILTR | 0 | 1 | 2 | 3 |

If the displayed temperature is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display.

Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

Filter values represent no filtering (0), up to heavy filtering (3). A value of 1 for the filter uses 1/4 of the new input and 3/4 of the previous display to generate the new display. A filter value of 2 uses 1/8 new and 7/8 previous. A filter value of 3 uses 1/16 new and 15/16 previous.

**FILTER BAND**

| bAND | 0 to 199 display units |

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter disengages. When the variation becomes less than the band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of ‘0’ keeps the filter permanently engaged at the filter level selected above.

**USER INPUT FUNCTION**

| USr IN | No |

**DISPLAY MODE**

</table>

* Indicates Edge Triggered function. All others are Level Active functions.

**USER INPUT ASSIGNMENT**

<table>
<thead>
<tr>
<th>U-RSN</th>
<th>Hi</th>
<th>Hi-LO</th>
</tr>
</thead>
</table>

Select the value(s) to which the User Input Function is assigned. The User Input Assignment only applies if a selection of reset or display hold is selected in the User Input Function menu.

**USER INPUT ACTIVE LEVEL**

| U-Rct | Lo | Hi |

Select whether the user input is configured as active low or active high.
5.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS

MAX DISPLAY ENABLE

Enables the Maximum Display Capture capability.

MAX CAPTURE DELAY TIME

When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

MIN DISPLAY ENABLE

Enables the Minimum Display Capture capability.

MIN CAPTURE DELAY TIME

When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

FACTORY SERVICE OPERATIONS

Select YES to perform any of the Factory Service Operations shown below.

RESTORE FACTORY DEFAULT SETTINGS

Entering Code 66 will overwrite all user settings with the factory settings. The meter will display rESEt and then return to Code 00. Press the PAR button to exit the module.

VIEW MODEL AND VERSION DISPLAY

Entering Code 50 will display the version (x.x) of the meter. The display then returns to Code 00. Press the PAR button to exit the module.

TOGGLE RTD INPUT DISPLAY MODE

Entering Code 85 toggles the selected RTD input display mode between a temperature or resistance readout. The resistance readout is useful for diagnostic purposes before and after calibration, or to display the measured resistance of a connected RTD probe.

For RTD type CuNi2T (Input Range Jumper in 10Ω position), resistance is displayed in 0000 ohms resolution. For all other RTD types (100Ω position), resistance is displayed in 000 ohms resolution.

Upon entering Code 85, the meter displays either \( \text{dSP} \cdot t \) or \( \text{dSP} \cdot r \) to indicate temperature or resistance readout selected. The display then returns to Code 00. Press the PAR button to exit the module.

CALIBRATION

The PAXLT uses stored calibration values to provide accurate temperature measurements. Over time, the electrical characteristics of the components inside the meter could slowly change, with the result being that the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration for thermocouple inputs involves a voltage calibration and a cold junction calibration. It is recommended that both calibrations be performed. The voltage calibration must precede cold junction calibration.

Calibration of the meter should only be performed by persons experienced in calibrating electronic equipment. Allow a minimum 30 minute warm up before performing any calibration procedures. The following procedures should be performed at an ambient temperature of 15 to 35°C (59 to 95°F).

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the meter.

10 OHM RTD Range Calibration

1. Set the Input Range Jumper to 10 ohm position.
2. With the display at Code 48, press the PAR key. Unit displays CRL NO.
3. Press SEL to select 10 ohm range. Display reads CRL r 10.
4. Press PAR. Display reads CDF.
5. Apply a direct short to terminals RTD (4), TC (6) and COMM (7) using a three wire link. Press PAR. Display reads CDFL for about 10 seconds.
6. When the display reads 5DF, apply a precision resistance of 15 ohms (with an accuracy of 0.01% or better) to terminals RTD, TC and COMM using a three wire link. Press PAR. Display reads CDFL for about 10 seconds.
7. When display reads CRL NO, press PAR twice to exit calibration and return to the normal display mode.

100 OHM RTD Range Calibration

1. Set the Input Range Jumper to 100 ohm position.
2. With the display at Code 48, press the PAR key. Unit displays CRL NO.
3. Press SEL twice to select 100 ohm range. Display reads CRL r 100.
4. Press PAR. Display reads CDF.
5. Apply a direct short to terminals RTD (4), TC (6) and COMM (7) using a three wire link. Press PAR. Display reads CDFL for about 10 seconds.
6. When the display reads 30DF, apply a precision resistance of 300 ohms (with an accuracy of 0.01% or better) to terminals RTD, TC and COMM using a three wire link. Press PAR. Display reads CDFL for about 10 seconds.
7. When display reads CRL NO, press PAR twice to exit calibration and return to the normal display mode.
**THERMOCOUPLE Voltage Calibration**
1. Connect a precision DC voltage source with an accuracy of 0.01% or better to the TC and COMM terminals. Set the voltage source to zero.
2. With the display at Code 48, press the PAR key. Unit displays CR. L No.
3. Press SEL until the display reads CR. kC to select thermocouple input.
4. Press PAR. Display reads 000.
5. With the voltage source set to zero, press PAR. Displays CR. L for about 6 seconds.
6. When the display reads 500, set the voltage source output to 60.000 mV. Press PAR. Display reads CR. L for about 6 seconds.
7. When display reads 500, press PAR twice to exit calibration and return to the normal display mode. Proceed to Cold Junction Calibration.

**THERMOCOUPLE Cold Junction Calibration**
1. The ambient temperature must be between 20°C and 30°C.
2. Connect a thermocouple (types T, E, J, K or N only) with an accuracy of 1°C or better to the meter.
3. Enter programming mode and verify the following settings in Module 1:
   - Type = thermocouple type connected to the meter.
   - CJ = ON; SCALE = 0°C; dECPl = 00; OFSEL = 00
4. Place the thermocouple in close thermal contact to a reference thermometer probe. (Use a reference thermometer with an accuracy of 0.25°C or better.) The two probes should be shielded from air movement and allowed sufficient time to equalize in temperature. (A calibration bath of known temperature could be used in place of the thermometer.)
5. Compare the unit display with the reference temperature indicator (or calibration bath). If a difference of more than +/- 1.0°C exists, note the difference (CJ Error) and continue with cold junction calibration.
   - CJ Error = Reference Temperature - Unit Display
7. Press PAR. Displays read Lf followed by the current cold junction value. Calculate a new cold junction value as follows:
   - New cold junction = Current cold junction + CJ Error (noted above)
8. Press PAR and set the display to the new cold junction value. Press PAR to enter the new value. Display reads CR. L for 6 seconds and returns to CR. L No.
9. Press PAR twice to exit calibration and return to the normal display mode. Verify the input reading is correct. If not, repeat steps 5 through 9.

**5.3 MODULE 3 - DISPLAY AND FRONT PANEL KEY**

**PARAMETERS (3-dSP)**

**DISPLAY UPDATE TIME**

```
3-dSP
PAR

dsp t 05 1 2 seconds
```

This parameter sets the display update time in seconds.

**FRONT PANEL DISPLAY SELECT ENABLE (SEL)**

```
SEL

NO YES
```

The YES selection allows the SEL key to toggle through the enabled displays.

**FRONT PANEL RESET ENABLE (RST)**

```
rSt

NO LO dSP
HI HI-LO
```

This selection allows the RST button to reset the selected value(s).

**DISPLAY SCROLL ENABLE**

```
Scrol

NO YES
```

The YES selection allows the display to automatically scroll through the enabled displays. The scroll rate is every 4 seconds. This parameter only appears when the MAX or MIN displays are enabled.

**UNITS LABEL BACKLIGHT**

```
b-Lit

OFF ON OFF
```

The PAXLT includes two units overlay labels (°C and °F) which can be installed into the meter's bezel display assembly. The backlight for the units label is activated by this parameter.

**DISPLAY INTENSITY LEVEL**

```
3-dLEU

3 1 to 5
```

Enter the desired Display Intensity Level (1-5). The display will actively dim or brighten as levels are changed.

**PROGRAMMING SECURITY CODE**

```
CodE

0 to 999
```

The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Lac) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only user selected values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Entering a Security Code from 1-99 enables Quick Programming mode, and displays a sublist to select which values appear in the Quick Programming menu. Values set to YES in the sublist are accessible in Quick Programming. These values include the Setpoints (SP. 1, SP. 2) and Display Intensity (d-LEU).

Programming any Security Code other than 0, requires this code to be entered at the Code prompt in order to access Full Programming mode. Quick Programming mode, if enabled, is accessed before the Code prompt appears.

</table>

* Entering Code 222 allows access regardless of security code.
5.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

PARAMETER MENU

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPSEL</td>
<td>Setpoint Select</td>
</tr>
<tr>
<td>Enb-n</td>
<td>Setpoint Enable</td>
</tr>
<tr>
<td>Act-n</td>
<td>Setpoint Action</td>
</tr>
<tr>
<td>Spk-n</td>
<td>Setpoint Value</td>
</tr>
<tr>
<td>Hys-n</td>
<td>Hysteresis Value</td>
</tr>
<tr>
<td>Lon-n</td>
<td>On Time Delay</td>
</tr>
<tr>
<td>Log-n</td>
<td>Off Time Delay</td>
</tr>
</tbody>
</table>

SETPOINT SELECT

Select the Setpoint Output to be programmed, starting with Setpoint 1. The “n” in the following parameters reflects the chosen Setpoint number. After the selected setpoint is completely programmed, the display returns to menu. Repeat steps for Setpoint 2 if both Setpoints are being used. Select “Enb” to exit the Setpoint programming module.

SETPOINT ENABLE

Select “Yes” to enable Setpoint “n” and access the setup parameters. If “No” is selected, the unit returns to menu and Setpoint “n” is disabled.

SETPOINT ACTION

Enter the action for the selected setpoint (output). See Setpoint Output Figures for a visual detail of each action.

- **High Acting, with balanced hysteresis (H1-bl)**
- **Low Acting, with balanced hysteresis (L0-bl)**
- **High Acting, with unbalanced hysteresis (H1-Ub)**
- **Low Acting, with unbalanced hysteresis (L0-Ub)**

ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

OUTPUT RESET ACTION

Enter the reset action of the output. See figure for details.

- **Auto** = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The “on” output may be manually reset (off) immediately by the front panel RST button or user input. The output remains off until the trigger point is crossed again.

HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.

Setpoint Value

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.
Latch = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel RST button or user input manual reset, or meter power cycle. When the user input or RST button is activated (momentary action), the corresponding “on” output is reset immediately and remains off until the trigger point is crossed again. (Previously latched alarms will be off if power up Display Value is lower than setpoint value.)

L * dl Y = Latch with delay reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel RST button or user input manual reset, or meter power cycle. When the user input or RST button is activated (momentary action), the meter delays the event until the corresponding “on” output crosses the trigger off point. (Previously latched outputs are off if power up Display Value is lower than setpoint value. During a power cycle, the meter erases a previous L * dl Y reset if it is not activated at power up.)

Setpoint Output Reset Actions

OUTPUT RESET WITH DISPLAY RESET

This parameter enables the RST button or user input to reset the output when the display is reset.

Note: For this parameter to operate, the RST button or User Input being used must be set to dsp and the Input value must be displayed. If these conditions are not met, the output will not reset.

STANDBY OPERATION

When yes, the output is disabled (after a power up) until the trigger point is crossed. Once the output is on, the output operates normally per the Setpoint Action and Output Reset Action.

PROBE BURN-OUT ACTION

Enter the probe burn-out action. In the event of a temperature probe failure (TC open; RTD open or short), the output can be programmed to be on or off.
Press PAR key to enter Programming Mode.
LIMITED WARRANTY

The Company warrants the products it manufactures against defects in materials and workmanship for a period limited to two years from the date of shipment, provided the products have been stored, handled, installed, and used under proper conditions. The Company’s liability under this limited warranty shall extend only to the repair or replacement of a defective product, at The Company’s option. The Company disclaims all liability for any affirmation, promise or representation with respect to the products.

The customer agrees to hold Red Lion Controls harmless from, defend, and indemnify RLC against damages, claims, and expenses arising out of subsequent sales of RLC products or products containing components manufactured by RLC and based upon personal injuries, deaths, property damage, lost profits, and other matters which Buyer, its employees, or sub-contractors are or may be to any extent liable, including without limitation penalties imposed by the Consumer Product Safety Act (P.L. 92-573) and liability imposed upon any person pursuant to the Magnuson-Moss Warranty Act (P.L. 93-637), as now in effect or as amended hereafter.

No warranties expressed or implied are created with respect to The Company’s products except those expressly contained herein. The Customer acknowledges the disclaimers and limitations contained herein and relies on no other warranties or affirmations.
