IR.T SERIES
CURRENT CONTROL RELAY
UL listed   CSA recognized

- Automatic or Manual Control
- Start-up Inhibit
- Adjustable Hysteresis
- Multiple Voltages
- LED Relay Status Indicator

1. AC Current Control Without Latching:
The output relay is energized when the current (peak current on AC) overshoots the level selected on the potentiometer. It de-energizes when the current falls below the normal current by 5 to 50% or when input power breaks. The hysteresis is controlled by a top mounted potentiometer and its selection does not change the chosen current level.

2. AC Current Control With Latching:
The output relay is energized when the current reaches the selected value and stays latched. The contact between terminal B1 and B2 (or 11 and 9) should be opened or input power to the device interrupted to reset. In this case, it is preferable to reduce the hysteresis 5%.

Output Relay | SPDT Relay |
Contact material | AgCdO |
Maximum loading | 10 A AC resistive 1 A DC inductive |
Maximum switching voltage | 250 VAC or DC |
Relay maximum power rating | 2500 VA 30W |
Mechanical life of relay | 30 x 10^6 operations |
Electrical life of relay | 2 x 10^6 at 2500 VA resistive load |
Operating temperature | +14°F to +140°F -10°C to +60°C |
Weight | 7 oz. (200g) |

Option: 24 VDC power - the voltage and the measured current must be from separate sources.

Note: Upon energization of the current control IR.T Series Relay, the time delay, which is adjustable from .1 to 10 seconds, inhibits the output relay during start-up periods. The delay time is adjustable via a potentiometer located on the side of the case. Applies to both versions, with and without latching.

ORDERING INFORMATION:

D = DIN-rail mounting
L = 11 pin plug-in
