

Platform Cylinder

Series CXT

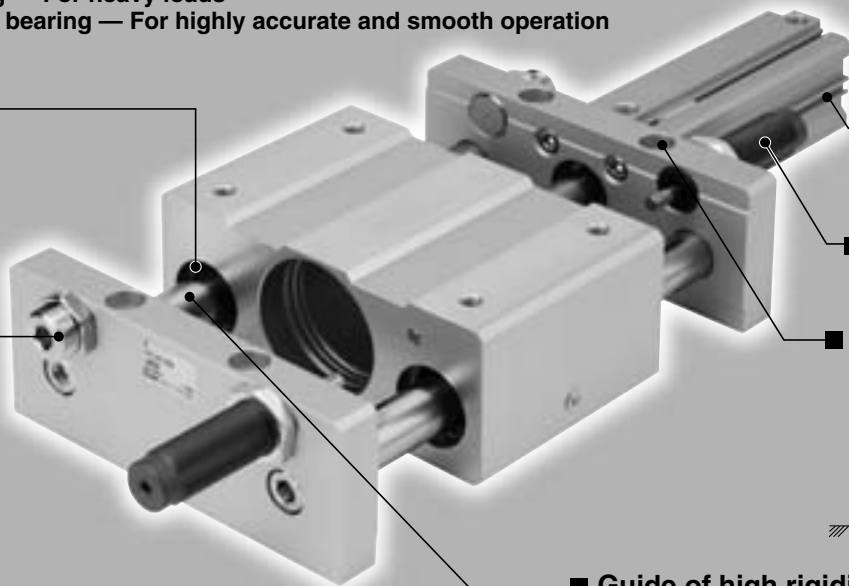

ø12, ø16, ø20, ø25, ø32, ø40

A highly rigid and highly accurate slide table integrated with an actuator.

■ Two styles of guide rod bearings to accommodate your application

Slide bearing — For heavy loads

Ball bushing bearing — For highly accurate and smooth operation

■ Auto switch can be mounted.

■ A shock absorber can be installed (option).

■ Can be mounted on two sides.

Mounting from the upper side Mounting from the bottom side

■ Guide of high rigidity

■ Adjusting bolt with bumper is standard.

Performs the function of a cushion and adjusts the stroke 5 mm on each side, or 10 mm for both sides.

For moving and transferring workpieces.

For moving the receptacle for workpieces used in stamping or press-fitting processes.

For using as a Pick & Place unit in combination with other actuators.

Series	Maximum load mass (kg)	CXTM (Slide bearing)		CXTL (Ball bushing bearing)	
		Table ⁽¹⁾ displacement (mm)	Allowable ⁽²⁾ static mass (kg)	Table ⁽¹⁾ displacement (mm)	Allowable ⁽²⁾ static mass (kg)
CXT□12	3	0.002	350	0.015	60
CXT□16	7	0.004	500	0.019	70
CXT□20	12	0.007	900	0.044	125
CXT□25	20	0.030	900	0.180	125
CXT□32	30	0.032	1100	0.123	140
CXT□40	50	0.025	1900	0.109	170

Note 1) Table displacement

"Table displacement" is the amount of deflection of the guide rod that occurs when a maximum load mass is placed on the maximum stroke table while the table is at the center of the stroke (the amount of looseness is not included).

Note 2) Allowable static mass

An "allowable stationary mass" is the allowable amount of stationary mass that can be applied vertically to the workpiece mounting surface of the table while the table is at the stroke end.

■ Series Variations

Series CXT Model Selection

Selection Step

Guideline for Selection of Bearing Type

Bearing type	Required conditions
Slide bearing	<ul style="list-style-type: none"> • Impact load and vibration load are added. • Change in load is large. • Long life span is required.
Ball bushing bearing	<ul style="list-style-type: none"> • High accuracy (Little rattle is allowed.) • Smooth operation

$$\sum \alpha \cdot n = \frac{\text{Load mass [W]}}{\text{Maximum load mass [Wmax]}} + \frac{\text{Moment [mn]}}{\text{Allowable moment [Mn]}}$$

Load mass [W] are as follows in compliance to the mounting way.

Horizontal mounting: W

Inclined mounting: $W \cos \theta$ (θ : Angle of inclination, refer to the figure below.)

Vertical mounting: 0 (None)

The moment load rate must be calculated in accordance with the above formula for all types, M1 to M3.

As for W_{max} and M_n , refer to the maximum load mass and allowable moment table in the next section.

The moment for the inclined mounting must be calculated taking the moment caused by the load into consideration.

Note) Make sure that the distance between the guide shaft center to the center of gravity of the load does not exceed the distance GP between the guide shafts given in the table below. If the distance must be exceeded due to unavoidable circumstances, decrease the load rate that is applied to the guide as indicated below in order to determine the distance.

$$\sum \alpha \cdot n \leq \frac{1}{(L/GP)^2} \quad (\text{Provided that } L > GP)$$

Bore size	12	16	20	25	32	40
Distance between guide rods GP (mm)	50	65	80	90	110	130

Horizontal mounting: $f = \mu \times W$

Inclined mounting: $f = \mu \times W \cos \theta + W \sin \theta$
(Refer to the figure on the right.)

Vertical mounting: $f = W$

$\mu = 0.3$ (Slide bearing)

$\mu = 0.1$ (Ball bushing bearing)

Determine the movable mass W_A which can be operated only by adjusting bolts.

Series CXT

Non-rotating Accuracy of Slide Block

Bore size (mm)	CXTM (Slide bearing)		CXTL (Ball bushing bearing)	
	$\theta_p (= \theta_y)$	θ_r	$\theta_p (= \theta_y)$	θ_r
12	$\pm 0.09^\circ$	$\pm 0.12^\circ$	$\pm 0.05^\circ$	$\pm 0.05^\circ$
16	$\pm 0.08^\circ$	$\pm 0.10^\circ$	$\pm 0.05^\circ$	$\pm 0.04^\circ$
20	$\pm 0.07^\circ$	$\pm 0.08^\circ$	$\pm 0.04^\circ$	$\pm 0.03^\circ$
25	$\pm 0.07^\circ$	$\pm 0.07^\circ$	$\pm 0.04^\circ$	$\pm 0.03^\circ$
32	$\pm 0.08^\circ$	$\pm 0.07^\circ$	$\pm 0.04^\circ$	$\pm 0.03^\circ$
40	$\pm 0.06^\circ$	$\pm 0.06^\circ$	$\pm 0.03^\circ$	$\pm 0.03^\circ$

Maximum Load Mass and Allowable Moment

Bore size (mm)	Bearing	Maximum load mass W_{max} (kg)	Allowable moment (N · m)	
			M1 (= M3)	M2
12	Slide bearing	3	1.25	1.68
	Ball bushing bearing		0.53	0.70
16	Slide bearing	7	3.34	4.25
	Ball bushing bearing		1.53	2.11
20	Slide bearing	12	11.4	17.1
	Ball bushing bearing		5.60	7.28
25	Slide bearing	20	11.4	19.3
	Ball bushing bearing		5.60	8.19
32	Slide bearing	30	19.8	23.3
	Ball bushing bearing		10.1	14.8
40	Slide bearing	50	37.3	46.2
	Ball bushing bearing		21.3	27.5

Note) For the purpose of calculating the moment, the length of the arm is the distance that is measured from the guide shaft center ("●" mark). Dimension ℓ from the guide shaft center to the top surface of the table is indicated below.

Bore size	12	16	20	25	32	40
ℓ dimension (mm)	19.5	24	28	31	39.5	47.5

Allowable Load Only by Adjusting Bolt

If only the adjusting bolt is used for stopping the load, make sure that the load mass and the speed will be below the curve in the graph on the right, taking into consideration the durability of the rubber bumper that is attached to the end of the adjusting bolt and the vibration and noise that are created when stopping (provided that the maximum load mass is not exceeded).

In conditions in which the load mass and the speed will be above the curve, use a shock absorber (provided that the maximum load mass is not exceeded).

⚠ Caution

In the case of the ball bushing type, the service life could be drastically shortened if shocks or excessive moments are applied. Therefore, even if the conditions given above are not exceeded, the use of a shock absorber is recommended.

Static Movable Mass when Stopped

When Series CXT cylinder is used for moving the workpiece receptacle, such as in a stamping or press-fitting process, a vertical load will be applied to the top surface of the stopped slide block (refer to the figure on the right). In this case, the allowable mass is greater than the maximum load mass, as given in the table on the right.

⚠ Caution

1. Make sure that the slide block is stopped at the stroke end.
2. Match the center of the mass to be applied with the center of the slide block. The direction of the mass must be vertically downward in relation to the surface on which the workpiece is mounted, as shown in the figure on the right.
3. Do not apply a load that involves shocks such as those caused by pounding (particularly with the ball bushing style).
4. If this mass is applied, the deflection of the guide shaft will also have a large value.

Bore size (mm)	Allowable Static Mass (kg)	
	CXTM (Slide bearing)	CXTL (Ball bushing bearing)
12	350	60
16	500	70
20	900	125
25	900	125
32	1100	140
40	1900	170

* Since this is a guideline including hysteresis, not meant to be guaranteed. (Assuming approximately ±30% dispersion)
There may be the case it will vary substantially depending on an ambient environment.

* Auto switch mounting brackets BQ2-012 are not used for sizes over ø32 of D-A9□(V)/M9□(V)/M9□W(V)/M9□A(V)L types. The above values indicate the operating range when mounted with the conventional auto switch installation groove.

Auto Switch Mounting Bracket: Part No.

Auto switch mounting surface	Bore size (mm)		
	ø12	ø16, ø20, ø25	ø32, ø40
Auto switch mounting surface	Auto switch mounting surface	Auto switch mounting surface	Auto switch mounting surface
Auto switch model	A, B and C sides	Port A, B and C sides	Port side A, B and C sides
D-A9□ D-A9□V D-M9□ D-M9□V D-M9□W D-M9□WV D-M9□AL D-M9□AVL	Auto switch mounting bracket not required.	Auto switch mounting bracket not required.	Auto switch mounting bracket not required. ① BQ-2 ② BQ2-012 2 kinds of auto switch mounting brackets are available as a set.

Note 1) For each cylinder series, when a compact auto switch is mounted on the three sides (A, B and C above) other than the port side of bore sizes ø32 and ø40, the auto switch mounting brackets above are required. Order them separately from cylinders.

Order example
 CXTM32-50-M9BW.....1
 BQ-2.....2 pcs.
 BQ2-012.....2 pcs.

Note 2) When shipping cylinders, auto switch mounting brackets and auto switches are shipped together.

Auto switch model	Bore size (mm)	
	32	40
D-A7□/A80 D-A73C/A80C D-A7□H/A80H D-A79W D-F7□/J79 D-F7□V D-J79C D-F7□W/J79W D-F7□WV D-F7BAL/F7BAVL D-F79F/F7NTL		BQ-2

Note) When shipping cylinders, auto switch mounting brackets and auto switches are shipped together.

[Mounting screw set made of stainless steel]

The following set of mounting screws made of stainless steel (including nuts) is available. Use it in accordance with the operating environment. (Please order the auto switch mounting bracket separately, since it is not included.)

BBA2: For D-A7/A8/F7/J7 types

D-F7BAL and F7BAVL auto switches are set on the cylinder with the stainless steel screws above when shipped. When an auto switch is shipped independently, BBA2 is attached.

Note 4) Refer to page 1817 for the details of BBA2.

Note 5) When D-M9□A(V)L type is mounted on a side other than ø32 and ø40 port sides, order auto switch mounting brackets BQ2-012S and BQ-2, and a stainless steel screw set BBA2.

Auto Switch Mounting Bracket Mass

Auto switch mounting bracket part no.	Mass (g)
BQ-2	1.5
BQ2-012	5

Other Applicable Auto Switches

Refer to pages 1719 to 1827 for the detailed specifications of auto switches.

Auto switch type	Model	Electrical entry (Fetching direction)	Features
Reed	D-A73	Grommet (Perpendicular)	—
	D-A80		Without indicator light
	D-A73H, A76H	Grommet (In-line)	—
	D-A80H		Without indicator light
Solid state	D-F7NV, F7PV, F7BV	Grommet (Perpendicular)	—
	D-F7NWV, F7BWV		Diagnostic indication (2-color indication)
	D-F7BAVL		Water resistant (2-color indication)
	D-F79, F7P, J79	Grommet (In-line)	—
	D-F79W, F7PW, J79W		Diagnostic indication (2-color indication)
	D-F7BAL		Water resistant (2-color indication)
	D-F7NTL		With timer

* For solid state auto switches, auto switches with a pre-wired connector are also available. Refer to pages 1784 and 1785 for details.

* Normally closed (NC = b contact), solid state auto switch (D-F9G/F9H type) are also available. For details, refer to page 1746.

* D-A7/A8/F7/J7 types cannot be mounted on ø12 to ø25.

- If the cylinder is used in an application in which a magnetic material is placed in close contact around the cylinder as shown in the graph on the below (including cases in which even one of the sides is in close contact) the operation of auto switches could become unstable. Therefore, please check with SMC for this type of application.

Series CXT Specific Product Precautions

Be sure to read before handling.
Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

Operating Precautions

⚠ Caution

1. Make sure not to apply to the slide block a load that exceeds the value that has been calculated in the selection procedures.
2. Operate the cylinder securing it by its plates, not by securing it by its slide block.
3. The clearance between the slide block and the plate at the stroke end is approximately 1 mm to 6 mm. It could be extremely dangerous, as there is the risk of getting your fingers caught.

Install a cover as necessary.

4. At both stroke ends, adjust the damper portion at the end of the adjusting bolt so that it comes in contact with the slide block. (The clearance between the slide block and the plate must be 1 mm or more.)

If it is operated without making any contact, the piston rod of the actuating cylinder or the connecting hardware (adapter) could become damaged by an excessive impact, or the slide block could collide with the plate and create an abnormal noise.

5. The load mass or operating speed will be limited if only the adjusting bolt is used.

Refer to the section on "Allowable load when only the adjusting bolt is used" on page 523

6. Please contact SMC if this product will be used in an environment in which the piston rod and the guide shaft surfaces will be exposed to water (hot water), coolant, cutting chips, or dust.

7. The slide block bearings must be greased periodically. Inject grease (Class 1 or 2 lithium soap grease consistency) through the grease inlet.

Note) On those with a cylinder bore of $\phi 12$, apply grease to the guide shaft.

8. To operate the cylinder, use a non-lubricating air supply. Use turbine oil Class 1 (ISO VG32), if lubricated. (Using machine oil or spindle oil are not allowed.)

Mounting

⚠ Caution

1. While a high level of flatness is desired for the surface on which the cylinder is to be mounted, if sufficient flatness cannot be attained, use shims to adjust the installation of the cylinder so that the slide block can operate throughout its stroke under the minimum operating pressure.

2. Do not scratch or gouge the piston rod of the actuating cylinder, as this could damage the rod seal and lead to air leaks.

The same applies to the guide shaft.

3. Make sure not to apply shocks or excessive moment to the slide block of the ball bushing type.

4. The port direction of the actuating cylinder can be changed in 90° increments by removing the four bolts that secure the cylinder in place.

After changing the direction, verify the operation at the minimum operating pressure.

5. Before the installation, thoroughly flush out the piping to prevent dust or cutting chips from entering the cylinder.

6. The mounting position of the adjusting bolt and the shock absorber cannot be inverted due to the constraints imposed by the locating pin for the shock absorber that is provided on the slide block.

To invert the position, please contact SMC.

Handling on Shock Absorber

⚠ Caution

1. Series RB (SMC made) shock absorbers can absorb a wide range of energy without requiring adjustment. (No adjustment screw is provided.)

2. The screw at the bottom is not for adjustment.

Never turn this screw as it could cause an oil leak (lowered performance).

3. Do not scratch the surface of the shock absorber rod because doing so could affect the shock absorber's durability or lead to poor retraction.

* For detailed specifications about the shock absorber, refer to page 1673.

Service Life and Replacement Period of Shock Absorber

⚠ Caution

1. Allowable operating cycle under the specifications set in this catalog is shown below.

- 1.2 million cycles RB08□□
- 2 million cycles RB10□□ to RB2725

Note) Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.
