

STEVEN ENGINEERING

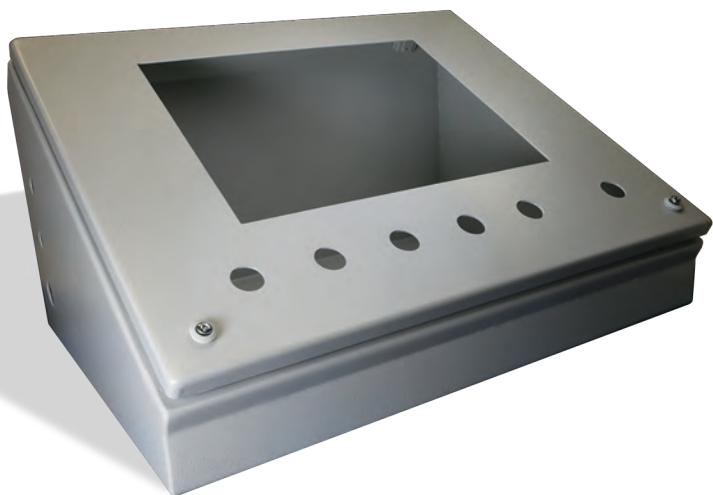

Now Offers CNC Enclosure Modification Services!

Contact us for more information.

Steven Engineering now has the capability to custom configure enclosures to meet all of your requirements. By using the state-of-the art Steinhauer eCAB ModCenter, we are able to offer an almost endless variety of options to fulfill the most demanding specifications. We have the capability to machine fiberglass, polycarbonate, sheet steel, copper and even stainless steel!

Our CNC center can replicate the exact locations and dimensions of your holes and cutouts. Consider the overall costs of customizing enclosures at your site. When you factor prep time, layout, machining, paint touch-up, as well as the elimination of costly errors, you'll easily see the value in receiving an enclosure from Steven Engineering that is built to your exact specifications—on time and on budget.

- **Drilling**
- **Tapping**
- **Cutouts**
- **Accessory installation**
- **Climate control device installation**
