## e-Rodless Actuator

## Series E-MY2B

# Suitable for light-load transfers. Combined with various guide types. 

## e-Rodless Actuator/Basic Type

Integrated control type

## Floating Bracket

Easy connection to an external guide. Two mounting directions are available.

Stroke
Adjusting Unit

Controller

## No Programming <br> Required

Realizes similar controllability by simple commands as a pneumatic cylinder.

## Speed / Acceleration Specifications

Speed Variation

| Main adjustment range |  | Low speed | Medium speed | Standard speed |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 10 to 100 | 50 to 300 | 100 to 1000 |
| Switch turned NO. | 1 | 10 | 50 | 100 |
|  | 2 | 20 | 75 | 200 |
|  | 3 | 30 | 100 | 300 |
|  | 4 | 40 | 125 | 400 |
|  | 5 | 50 | 150 | 500 |
|  | 6 | 75 | 200 | 600 |
|  | 7 | 100 | 250 | 700 |
|  | 8 | 300 | 300 | 800 |
|  | 9 | 500 | 500 | 900 |
|  | 10 | 1000 | 1000 | 1000 |

Load Spec. and Acceleration Variation
(kg)

| Payload |  | Heavy load | Standard load | Medium load | Light load |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Nominal <br> size | 16 | 6 | 4 | 2.5 | 1.25 |
|  | 25 | $(10)$ | $(5)$ | $(2.5)$ | $(1.25)$ |
|  | 20 | 8 | 4 | 2.5 |  |
|  |  | $(20)$ | $(10)$ | $(5)$ | $(2.5)$ |

Acceleration

| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0.25 | 0.49 | 0.98 | 1.96 |  |
|  | 2 | 0.49 | 0.74 | 1.47 | 3.94 |
|  | 3 | 0.74 | 0.98 | 1.96 | 3.92 |
|  | 4 | 0.98 | 1.23 | 2.45 | 4.90 |
|  | 5 | 1.23 | 1.47 | 2.94 | 5.88 |
|  | 6 | 1.47 | 1.96 | 3.92 | 7.84 |
|  | 7 | 1.72 | 2.45 | 4.90 | 9.80 |
|  | 8 | 1.96 | 2.94 | 5.88 | 11.76 |
|  | 9 | 2.21 | 3.92 | 7.84 | 15.68 |
|  | 10 | 2.45 | 4.90 | 9.80 | 19.60 |

## Remote Control Type

Easy to reset after installation as a result of the remote controller.
Suited for installing where it is difficult to reach because the controller can be operated in an easily accessible location.

- Cable length is selectable from $1 \mathrm{~m}, 3 \mathrm{~m}$ and 5 m .
- Improvement in the maximum operating temperature from $40^{\circ} \mathrm{C}$ to $50^{\circ} \mathrm{C}$ (Actuator unit only)
- Mounting method can be selected among 3 types.

## Intermediate Stop

## 3-point stoppable type

(2-point for both ends and 1-point for an intermediate stop) One intermediate stop is possible beside stops at both ends.

## 5-point stoppable type

(2-point for both ends and 3-point for an intermediate stop) 5 -point positioning is possible at any preferred locations.

## Stop Functions by External Inputs (5-point stoppable type only)

Stop command by an external input such as a PLC or PC makes it possible to decelerate or stop a slider (as programmed).

## Application example 1

Quick start-up is possible after stopping.

| Stop method | Stop by external inputs | Emergency stop |
| :---: | :---: | :---: |
| Stopping acceleration <br> (deceleration speed) | Value of a switch for <br> setting acceleration | $4.9 \mathrm{~m} / \mathrm{s}^{2}$ |
| Initial motion speed <br> after stopping | Value of a switch for <br> speed | $50 \mathrm{~mm} / \mathrm{s}$ |

* Settings for emergency acceleration and speed cannot be changed.

Repeatability of stop functions by external stop

| Travelling speed (mm/s) | 100 | 500 | 1000 |
| :---: | :---: | :---: | :---: |
| Repeatability (mm) | $\pm 0.5$ | $\pm 1.0$ | $\pm 2.0$ |

Note) The valves shown are to be used as a selection guide and are not guaranteed.

## Locking Functions

## Settings for speed/acceleration can be locked.

If the speed/acceleration switch is changed in the middle of locking, the alarm light will blink. However, the motion will continue in accordance with the preprogrammed settings.

* Settings for locking a stroke and intermidiate position are not applicable.

## Motor Placement: Mounting position of the

 motor is user selectable and can either be on the top or bottom of the actuator.

## Series E-MY2B Model Selection 1

For e-rodless actuator series E-MY2C/H/HT, refer to page 1113.

## Selection Flow Chart

Guideline for Tentative Model Selection

| Model | Type | Guideline for tentative model selection |  |  |  |  |  | Note |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Stroke accuracy | Use of other guide | Direct loaded (Horizontal) | Table Note) accuracy | Direct mount (Wall mounting) | Load resistance / Moment resistance |  |
| E-MY2B | Basic type | ( ${ }^{\text {a }}$ | ( ${ }^{\text {a }}$ | $\bigcirc$ | $\triangle$ | $\triangle$ | $\triangle$ | Light-load transfer; combining with another guide; stroke accuracy is required. |
| E-MY2C | Cam follower guide type | ( $)$ | $\times$ | ( | ( $)$ | $\bigcirc$ | $\bigcirc$ | Workpiece direct mounting; table and stroke accuracy are required. |
| E-MY2H | Linear guide single axis type | ( ) | $\times$ | ( | ( | ( $)$ | $\bigcirc$ | Workpiece direct mounting without restriction of mount ing direction; table and stroke accuracy are required. |
| E-MY2HT | Linear guide double axis type | ( ) | $\times$ | ( ) | ( | ( ) | ( ) | Workpiece direct mounting without restriction of mounting direction; table and stroke accuracy are required especially when a heavy load or moment is applied. |

© Most suitable ○Suitable $\triangle$ Usable $\times$ Not recommended
Note) The table accuracy means the amount of table deflection when a moment is applied.
Guideline for when the load spec is temporarily chosen.

Note) Friction coefficient for combining with another guide is 0.1 or less.
Heavy load
specifications $\left(\mathbf{2 . 4 5} \mathbf{m} \mathbf{s}^{\mathbf{2}}\right.$ )

Note) Tact time may vary depending on the load mass or sliding resistance and thus value is not guaranteed.

## Calculation of Guide Load Factor

1. Maximum allowable load (1), static moment (2), and dynamic moment (at the time of impact with stopper) (3) must be examined for the selection calculations.

* To evaluate, use $V a$ (average speed) for (1) and (2), and $V$ (impact speed $V=1.4 \mathrm{Va}$ ) for (3). Calculate m max for (1) from the maximum load mass ( $\mathrm{m} 1, \mathrm{~m} 2, \mathrm{~m} 3$ ) and $M \max$ for (2) and (3) from the maximum allowable moment graph (M1, M2, M3).

Note 1) Moment caused by the load, etc., with actuator in resting condition.
Note 2) Moment caused by the impact load equivalent at the stroke end (at the time of collision to stopper).
Note 3) Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors $(\Sigma \alpha)$ is the total of all such moments.
2. Reference formulas [Dynamic moment at impact]

Use the following formulas to calculate dynamic moment when taking stopper impact into consideration.
$\mathbf{m}$ : Load mass (kg)
F : Load (N)
$\mathrm{F}_{\mathrm{E}}$ : Load equivalent to impact (at impact with stopper) (N)
a : Set acceleration $\left(\mathrm{m} / \mathrm{s}^{2}\right)$
$v$ : Impact speed ( $\mathrm{mm} / \mathrm{s}$ )
M : Static moment ( $\mathrm{N} \cdot \mathrm{m}$ )
$\mathbf{L}_{1}$ : Distance to the load's center of gravity (m)
$\mathrm{Me}_{\mathrm{E}}$ :Dynamic moment ( $\mathrm{N} \cdot \mathrm{m}$ )
$\mathrm{F}_{\mathrm{E}}=\mathrm{m} \cdot \mathrm{a}$
$\therefore \mathbf{M E}_{\mathbf{E}}=\frac{1}{3} \cdot \mathrm{~F}_{\mathrm{E}} \cdot \mathrm{L}_{\mathbf{1}}(\mathrm{N} \cdot \mathrm{m})^{\text {Note 4) }}$

Note 4) Average load coefficient ( $=\frac{1}{3}$ ):
This coefficient is for averaging the maximum load
moment at the time of stopper impact according to service life calculations.

## Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum allowable load value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable load for the selected conditions.

## Maximum Load Mass

Select the load mass from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

The graph value is for calculating the guide load factors. Refer to the table below for actual maximum load mass. The maximum load mass shows the motor ability.

Refer to page 1099 for maximum load mass value.

## $\triangle$ Caution

Select the required model by taking into consideration the operating condition specifications and any possible specification changes that may occur during operation. Contact the nearest sales representative for SMC's model selection software, which will help in selecting the correct model.
3. Refer to pages 1095 and 1096 for detailed model selection procedures.

## Model Selection

## Types of Load Mass and Moment Applied to Rodless Actuators

Multiple moments may be generated depending on the mounting orientation, load, and position of the center of gravity.

| Load mass and static | m |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
|  | Mounting orientation |  | Horizontal mounting | $\begin{gathered} \hline \text { Ceiling } \\ \text { mounting } \end{gathered}$ | $\begin{gathered} \text { Wall } \\ \text { mounting } \end{gathered}$ |
|  | Static load (m) |  | $\mathrm{m}_{1}$ | $\mathrm{m}_{2}$ | $\mathrm{m}_{3}$ |
|  |  | M ${ }_{1}$ | $\mathrm{m}_{1 \times \mathrm{gxX}}$ | $\mathrm{m}_{2} \times \mathrm{gxX}$ | - |
|  |  | $\mathrm{M}_{2}$ | $\mathrm{m}_{1 \times \mathrm{gx}} \mathbf{Y}$ | $\mathrm{m}_{2} \times \mathrm{gxy}$ | $m_{3} \times \mathrm{g} \times \mathrm{Z}$ |
|  |  | M3 | - | - | $\mathrm{m}_{3} \times \mathrm{gxX}$ |
|  | g : Gravitational acceleration ( $9.8 \mathrm{~m} / \mathrm{s}^{2}$ ) |  |  |  |  |

## Dynamic moment

Note) Regardless of the mounting orientation, dynamic moment is calculated with the formulas above.

E-MY2B/ $m_{1}, m_{2}, m_{3}$

E-MY2B/M ${ }_{1}, M_{3}$

E-MY2B/M ${ }_{2}$

# Series E-MY2B <br> Model Selection 2 

The following are steps for selection with series E-MY2B best suited for your application.

## Calculation of Guide Load Factor

Load Blocking

M1: Moment
$\mathrm{M}_{1}$ max (from 2 of graph $\mathrm{M}_{1}$ ) $=1.45(\mathrm{~N} \cdot \mathrm{~m})$
$\mathrm{M}_{1}=\mathrm{m}_{1} \times \mathrm{gxX}=4 \times 9.8 \times 5 \times 10^{-3}=0.20(\mathrm{~N} \cdot \mathrm{~m})$
Load factor $\alpha 2=\mathrm{M}_{1} / \mathrm{M}_{1} \max =0.20 / 1.45=0.14$

$\mathbf{M}_{\mathbf{2}}$ : Moment
M2 max (from 3 of graph M 2 ) $=1.15(\mathrm{~N} \cdot \mathrm{~m})$
$\mathrm{M}_{3}=\mathrm{m}_{1} \times \mathrm{g} \times \mathrm{Y}=4 \times 9.8 \times 10 \times 10^{-3}=0.39(\mathrm{~N} \cdot \mathrm{~m})$
Load factor $\alpha 3=\mathrm{M} 2 / \mathrm{M} 2 \max =0.39 / 1.15=0.34$

## Model Selection

## Calculation of Guide Load Factor

## 4 Calculation of Load Factor for Dynamic Moment

## Load $\mathrm{FE}_{\mathrm{E}}$ at acceleration and deceleration

$\mathrm{FE}=\mathrm{mxa}=4 \times 4.9=19.6(\mathrm{~N})$
M1E: Moment
M1E $\max$ (From 4 of graph M1 at $600 \mathrm{~mm} / \mathrm{s}$ ) $=1.45(\mathrm{~N} \cdot \mathrm{~m})$
$\qquad$
$\mathrm{M}_{1 \mathrm{E}}=\frac{1}{3} \times \mathrm{FE} \times \mathrm{Z}=\frac{1}{3} \times 19.6 \times 20 \times 10^{-3}=0.13(\mathrm{~N} \cdot \mathrm{~m})$
$\qquad$

Load factor $\alpha_{4}=\mathrm{M} 1 \mathrm{E} / \mathrm{M} 1 \mathrm{E} \max =0.13 / 1.45=0.09$

## M3E: Moment

Мзе $\max$ (From 5 of graph M3 at $600 \mathrm{~mm} / \mathrm{s}$ ) $=1.45(\mathrm{~N} \cdot \mathrm{~m})$
M3E $=\frac{1}{3} \times F E \times Y=\frac{1}{3} \times 19.6 \times 10 \times 10^{-3}=0.07(\mathrm{~N} \cdot \mathrm{~m})$
Load factor $\alpha 5=$ МЗЕ $/$ МЗе $\max =0.07 / 1.45=0.05$

## 5 Sum and Examination of Guide Load Factors

$\Sigma \alpha=\alpha_{1}+\alpha_{2}+\alpha_{3}+\alpha_{4}+\alpha_{5}=0.26+0.14+0.34+0.09+0.05=0.88 \leqq 1$
The above calculation is within the allowable value and therefore the selected model can be used.
In an actual calculation, when sum of guide load factors $\Sigma \alpha$ in the formula above is more than 1, consider decreasing the speed or changing the product series.

E-MY2B Nominal size - Stroke $\square \square \mathbf{Z}_{\mathbf{Z}}^{\mathbf{M}}$ * Refer to page 1102 for dimensions of remote controller.

Nominal size: 16

Note) When the CE compliant model is selected, a noise filter is provided but not attached.
The cable for the CE compliant models uses the dedicated shielding. Even if a noise filter is attached to a non CE marked products, the products cannot be changed to a CE compliant product.

## Dimensions: Remote Control Type (Remote controller unit)

## Controller

## L-bracket / MYE-LB (Option)

## DIN rail bracket / MYE-DB (Option)

## Stroke Adjusting Unit

## E-MY2B-A16A

Side Support
Side support A MY-S25A

Side support B MY-S25B

Floating Bracket
MYAJ25
Note) Mounting direction (1) and (2) are available for this model.

## Application

Mounting direction (1) (to minimize the installation height)

## Mounting Example

## Floating Parts Dimensions

## Application

Mounting direction (2) (to minimize the installation width)

## Mounting Example

## Installation of Holding Bolts

Tightening Torque

O indicates on status, and - indicates off status.
*1 Displays for the 5-point stoppable type only.
*2 When the alarm is activated, see page 1107 for the ALM display.

## Internal Circuits and Wiring Examples

3-point Stoppable Type
Power Supply Cable 2 -core AWG20 ( 20 wires $/ 0.16 \mathrm{~mm}^{2}$ )

| Symbol | Color | Signal name | Contents |
| :---: | :---: | :---: | :---: |
| DC1 (+) | Brown | Vcc | er supply cables for |
| DC1 (-) | Blue | GND | driving the actuator |

I/O Cable 9-core AWG28 ( 7 wires/ $0.127 \mathrm{~mm}^{2}$ )

| Symbol | Color | Signal name | Contents |
| :---: | :---: | :--- | :--- |
| DC2 (+) | Brown | Vcc | Power supply cables for |
| signal |  |  |  |

This product can be used without connecting I/O cables, however please use caution and install a power supply switch for the actuator. In case of an emergency, please turn it off.

## I/O Cable Signals

| Input signal |  |  | Output signal |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Command | Symbol |  | Actuator status | Symbol |  |  |
|  | IN1 | IN2 |  | OUT1 | OUT2 | OUT3 |
| Motor side actuation instruction | $\bigcirc$ | - | Completion of motor side end positioning | $\bigcirc$ | $\bigcirc$ | - |
| End side actuation instruction | - | $\bigcirc$ | Completion of end positioning | $\bigcirc$ | - | $\bigcirc$ |
| Intermediate actuation instruction | $\bigcirc$ | $\bigcirc$ | Completion of intermediate positioning | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

O indicates on status, and - indicates off status.

## 5-point Stoppable Type

Power Supply Cable 2 -core AWG20 ( 20 wires $/ 0.16 \mathrm{~mm}^{2}$ )

| Symbol | Color | Signal name | Contents |
| :---: | :---: | :--- | :---: |
| DC1 $(+)$ | Brown | Vcc | Power supply cables for <br> driving the actuator |
| DC1 $(-)$ | Blue | GND |  |

I/O Cable 11 -core AWG28 ( 7 wires $/ 0.127 \mathrm{~mm}^{2}$ )

| Symbol | Color | Signal name | Contents |
| :---: | :---: | :--- | :--- |
| DC2 (+) | Brown | Vcc | Power supply cables for |
| signal |  |  |  |

This product can be used without connecting I/O cables, however please use caution and install a power supply switch for the actuator. In case of an emergency, please turn it off.

## I/O Cable Signals

Input signal

| Command | Symbol |  |  |
| :---: | :---: | :---: | :---: |
|  | IN1 | IN2 | IN3 |
| Motor side actuation instruction | $\bigcirc$ | - | - |
| End side actuation instruction | - | $\bigcirc$ | - |
| Intermediate actuation instruction 1 | - | - | $\bigcirc$ |
| Intermediate actuation instruction 2 | $\bigcirc$ | - | $\bigcirc$ |
| Intermediate actuation instruction 3 | - | $\bigcirc$ | $\bigcirc$ |
| External input stop instruction | $\bigcirc$ | $\bigcirc$ | - |

Output signal

| Actuator status | Symbol |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | OUT1 | OUT2 | OUT3 | OUT4 |
| Completion of motor side end positioning | $\bigcirc$ | $\bigcirc$ | - | - |
| Completion of end positioning | $\bigcirc$ | - | $\bigcirc$ | - |
| Completion of intermediate 1 positioning | $\bigcirc$ | - | - | $\bigcirc$ |
| Completion of intermediate 2 positioning | $\bigcirc$ | $\bigcirc$ | - | $\bigcirc$ |
| Completion of intermediate 3 positioning | $\bigcirc$ | - | $\bigcirc$ | $\bigcirc$ |
| Completion of external input stop | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | - |

O indicates on status, and - indicates off status.

## NPN input/output circuit

## PNP input/output circuit

NPN input/output circuit

## PNP input/output circuit

When the error indicator is displayed, refer to the following instructions.

| Item | Display | Contents | Solution |
| :---: | :---: | :---: | :---: |
| Emergency stop |  | Either the emergency stop input is opened, or the power supply for the signal is cutoff. | Confirm the power supply signal is energized and release the emergency stop input. (Refer to the circuit diagram on page 1106.) |
| Abnormal external output | MIDDLE $\qquad$ <br> C <br> MOTOR $\qquad$ <br> $\sigma$ ALM <br> END | External output is short-circuited. <br> * There is no external alarm output signal. | In case of common power supply, turn off the power supply and check the wiring condition of load. Restart the power supply. <br> (Refer to the circuit diagram on page 1106.) |
|  |  |  | In case of an independent power supply, turn off the power supply for the signals and check the wiring condition of load. Restart the power supply. <br> (Refer to the circuit diagram on page 1106.) |
| Power supply abnormality |  | The power supply voltage is excessive or lower than the limit for operation. | Check the power supply voltage and adjust it if necessary, then press the MIDDLE button. |
| Drive abnormality |  | Maximum output is continued for a prolonged period of time. | Check the work weight and confirm that no foreign materials are attached to the actuator. After confirming, press the MIDDLE button. |
| Temperature abnormality |  | Internal temperature of the controller is high. | Lower the surrounding temperature of the actuator in use, and then press the MIDDLE button. |

| Item | Display | Contents | Solution |
| :---: | :---: | :---: | :---: |
| Abnormal stroke |  | The motor is revolving at excessive speed or stops before target is achieved. | If any foreign materials are observed, remove them and then press the MIDDLE button. |
|  |  |  | After turning off the power supply, check to see whether the stroke adjusting unit is loose. If required, readjust the stroke and perform the stroke learning again. Note) |
|  |  |  | In case of using the remote controller type, please confirm the connection of the connector part between the motor and the controller, after turning off the power supply. |
|  |  |  | Press the MIDDLE button. |
| Motor abnormality |  | The motor does not revolve properly or over current is detected. | In case of using the remote controller type, please confirm the connector part between the motor and the controller after cutting off the power supply. |
| Controller abnormality |  | The CPU is malfunctioning or the memory content is abnormal. | Turn off the power supply and restart it. |
| Error of the set value |  | The switch settings for speed and acceleration have been changed while in a locked condition. <br> * There is no external alarm output signal. | Reset the settings for speed and acceleration to the set values while in a locked condition. |

Note) The product is in the same condition as when the stroke learning process is completed.
Return to the home position is not performed by the initial input

- If the error can not be corrected, turn off the power supply to stop operation, and contact your SMC sales representative.

## Alarm reset

There are two types of alarm reset: alarm reset manually (a) and an alarm reset externally (b) by an external signal.

## a: Alarm reset manually

In the event of an alarm, simply pushing (2) will revert from the alarm state.

## b: Alarm reset externally

In the event of an alarm, simply inputting an external emergency stop signal for 50 ms or longer will return to the state prior to the alarm. The emergency stop output will activate by releasing the input for the emergency stop.

The followings are the reinstated condition.

- The slider will be free until the command for driving is applied.
- After being reverted, the next input command for driving makes it start. The initial motion after being reverted is $50 \mathrm{~mm} / \mathrm{s}$ of a traveling speed.

## Series E-MY2B <br> Auto Switch Specifications

Note) The operating range is a guide including hysteresis, but is not guaranteed. There may be large variations (as much as $\pm 30 \%$ ) depending on the ambient environment.

## Auto Switch Proper Mounting Position (at Stroke End Detection)

D-M9 $\square$, D-M9 $\square$ V
D-A9, D-A9 $\square$ V
(mm)

D-M9 $\square \mathrm{W}, \mathrm{D}-\mathrm{M9} \square \mathrm{WV}$
(mm)

| Bore size | $\mathbf{A}$ | Operating range |
| :---: | :---: | :---: |
| 16 | 30 | 9 |
| 25 | 30 | 9 |

| Bore size | $\mathbf{A}$ | Operating range |
| :---: | :---: | :---: |
| $\mathbf{1 6}$ | 34 | 4.5 |
| $\mathbf{2 5}$ | 34 | 4.5 |

Note) Only adjust the setting position after confirming the auto switch is properly activated.

## Auto Switch Mounting

When mounting an auto switch, first hold the switch spacer with your fingers and push it into the groove. Confirm that it is aligned evenly within the groove and adjust the position if necessary. Then, insert the auto switch into the groove and slide it into the spacer.
After establishing the mounting position, use a watchmaker's flat head screwdriver to tighten the switch mounting screw which is included.

Note) When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a handle of approximately 5 to 6 mm in diameter. Also, tighten with a torque of about 0.1 to $0.15 \mathrm{~N} \cdot \mathrm{~m}$. As a guide, turn about $90^{\circ}$ past the point at which tightening can first be felt.

Switch Spacer Model

| Applicable bore size (mm) | $\mathbf{1 6}$ | $\mathbf{2 5}$ |
| :---: | :---: | :---: |
| Switch spacer model | BMY3-016 |  |

## Series E-MY2B

Made to Order Specifications:
Please consult with SMC for detailed dimensions, specifications and delivery.

## 1 Helical Insert Thread Specifications <br> -X168

The mounting threads of the slider are changed to helical insert threads. The thread size is standard size.
E-MY2B Refer to the standard model no.-X168
Example) E-MY2B25-300TN-M9B-X168

Others: Made to Order / For detail, please contact SMC.

## - 6-point stoppable type

Stoppable at both ends (2-point) and at intermediate strokes (4-point)

- Max. manufacturable stroke

Stroke exceeding 1000 mm is available.

| Nominal size | E-MY2B |
| :---: | :---: |
| $\mathbf{1 6}$ | 2000 |
| $\mathbf{2 5}$ | 2000 |

Design and Selection

## © Warning

1. Conduct operation at regulated voltage.

The product may not function correctly or the controller section may be damaged if used with any other voltage than the specified regulated voltage. If the regulated voltage is low, the load may not operate due to internal voltage drop of the controller section. Check and confirm the operating voltage before using.
2. Do not use a load that is over the maximum load volume.
The controller section may be damaged.
3. Operate within the limit of the specification range.

If operated outside of the specification range, there is a possibility of fire, malfunction, and or actuator damage. Operate after confirming the required specifications.
4. To prevent any damage by product failure or malfunction, plan and construct a backup system beforehand, such as multiplexing the components and equipment, employing failure free planning, etc.
5. Provide enough space for maintenance.

When planning, consider the space required for product checkup and maintenance.
6. Provide a protective cover when there is a risk of human injury.
If a driven object and or moving parts of an actuator pose a danger to human injury, design the structure to avoid contact with the human body.
7. Securely tighten all mounting parts and connecting parts of the actuator to prevent them from becoming loose.
In particular, when an actuator operates at a high frequency, or is installed where there is excessive vibration, ensure that all parts remain secure.
8. Do not apply more load than stipulated by the spec.
[kg]

| Nominal <br> size | Heavy load | Standard <br> load | Medium load | Light load |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 6}$ | $6(10)$ | $4(5)$ | $2.5(2.5)$ | $1.25(1.25)$ |
| $\mathbf{2 5}$ | $11(20)$ | $8(10)$ | $4(5)$ | $2.5(2.5)$ |

( ): When combined with another guide and the friction coefficient is 0.1 or less.
9. The resistance value of the attached equipment should be within the allowable external resistance value.

## $\triangle$ Caution

1. When using actuator with longer stroke, implement an intermediate support.
When using actuator with longer stroke, implement an intermediate support to prevent frame deflection or deflection caused by vibration or external impacts.

## Wiring

## Warning

3. Perform wiring when the power is off.

The controller section may be damaged and malfunction.
4. Do not wire with power lines or high voltage lines.

Conduct wiring for controller separately from power lines or high voltage lines to avoid interference from the noise or surge from the signal lines of the power lines or high voltage lines. This may result in malfunction.
5. Confirm that the wiring is properly insulated.

Be certain that there is no faulty wiring insulation (contact with other circuits, improper insulation between terminals, etc.) because the controller may be damaged due to excessively applied voltage or current flow to the controller section.
6. Be sure to attach a noise filter when a remote control type, CE compliant product is used.
Using without a noise filter will be a non-CE compliant product.

## Operating Environment

## Warning

1. Do not use in a place where the product may come in contact with dust, particles, water, chemicals and oil.
It may cause damage and malfunction.
2. Do not use in a place where a magnetic field is present.
It may cause malfunction to the actuator.
3. Do not use the product in the presence of flammable, explosive or corrosive gas.
It may cause fire, explosion, and corrosion.
The actuator does not have an explosion proof construction.
4. Do not use in an environment subjected to temperature cycle.
If used in an environment where temperature cycling occurs, other than the usual temperature change, the internal controller may be adversely effected.
5. Do not use in a place that has excessive electrical surge generation, even though this product is compliant with CE marking.
When there are units (solenoid type lifter, high frequency induction furnace, motor, etc.) which generate a large amount of surge in an area around the controller, deterioration or damage may occur to the internal circuit elements of the controller. Avoid sources of surge generation and crossed lines.
6. Select a product type that has built-in surge absorbing elements for a load, such as relays or solenoid valves which are employed for driving voltage generating load directly.
7. Install the actuator in a place without vibration and impact.
Vibration and impact causes damage and malfunction to the product and work, as well as prevents the work from meeting the specified parameters.

## Adjustment and Operation

## © Warning

## 1. Do not short the loads.

Short on the load of the controller indicates an error, but it may cause over current and damage the controller.
2. Do not operate or conduct any settings with wet hands.

LG1

An electrical shock may result from wet hands.
3. When operating the controller, avoid making contact with the workpiece.
Contact with the workpiece may cause injury.

## Caution

1. Do not push the setting buttons with sharp pointed items.
Sharp pointed items may cause setting button damage.
2. Do not touch the sides and lower parts of the motor and controller.
Conduct operation after confirming that the machine is cool since it gets hot while in operation.
3. After the stroke is adjusted, turn on the power supply and then perform stroke learning.
If stroke learning is not performed, the product may not operate according to the adjusted stroke and damage to any connected equipment may occur.
4. Do not randomly change the guide adjusting section setting.
Readjustment of the guide is not necessary for normal operation, since it is pre-adjusted. Accordingly, do not randomly change the guide adjusting section setting.

## Maintenance

## © Warning

1. Periodically perform maintenance of the product.

Confirm that the piping and bolts are securely tightened.
Unintentional malfunction of a system's components may occur as a result of an actuator malfunction.
2. Do not disassemble, modify (including change of printed circuit board) or repair.
Disassembly or modification may result in injury or failure.

## $\triangle$ Caution

1. Confirm the range of movement of a workpiece (a slider) before connecting the driving power supply or turning on the switch.
The movement of the work may cause an accident.
When the power supply is turned on, the work is returned to home position by input IN1 or IN2 signal. (Except in the case when stroke learning is not performed ever).
