15.2 kg

37\%
Workpiece does not interfere with the motor Table height > Motor height

## -Solid state auto switch can be mounted

 (For checking the limit and intermediate signal)- Switch wiring can be placed in the body
- A contact and B contact types available
-D-M9 $\square$ W (2-color indicator), D-M9 $\square$, D-M9 $\square E$ (B contact type)

2-color indicator solid state auto switch

## Application Examples

## Ball Screw Drive/LEJS Series

## Built-in Intermediate Supports Type

Ball Screw Drive LEJS63 $\square$ - $\square$ M Series
A maximum speed of $1800 \mathrm{~mm} / \mathrm{s}^{*}$ has been achieved throughout the entire stroke!

The use of intermediate supports results in reduced deflection of the ball screw when a long stroke is used.

Clean Room Specification
Ball Screw Drive 11-LEJS Series Size: 40, 63 ISO Class $4^{* 1, * 2}$

- Built-in vacuum piping
- Possible to mount the main body without removing the external cover, etc.

Selection Procedure

Step 2 Check the cycle time.
Step 3 Check the allowable moment.

## Selection Example

Operating conditions

- Work load: 60 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 300 [mm]
- Mounting orientation: Horizontal
- Motor type: Incremental encoder
- External force: 10 [ N ]

Check the speed-work load.
Select the product by referring to "Speed-Work Load Graph" (Page 121).
Selection example) The LEJS63S3B-300 is temporarily selected based on the graph shown on the right side.
The regeneration option may be necessary.
Refer to page 121 for "Required Conditions for Regeneration Option".

## Step 2 Check the cycle time.

Refer to method 1 for a rough estimate, and method 2 for a more precise value.
Method 1: Check the cycle time graph (Pages 122, 123)
The graph is based on the maximum speed of each size.
Method 2: Calculation
Cycle time $T$ can be found from the following equation.

- T1 and T3 can be obtained by the following equation. $\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1[\mathrm{~s}] \quad \mathrm{T} 3=\mathrm{V} / \mathrm{a} 2[\mathrm{~s}]$

The acceleration and deceleration values have upper limits depending on the workpiece mass and the duty ratio.
Check that they do not exceed the upper limit, by referring to "Work load-Acceleration/Deceleration Graph (Guide)" (Pages 124 to 126).
For the ball screw type, there is an upper limit of the speed depending on the stroke. Check that if it does not exceed the upper limit, by referring to the specifications (Page 133).

- T2 can be found from the following equation.
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}[\mathrm{s}]$
- T4 varies depending on the motor type and load. The value below is recommended.
T4 = $0.05[\mathrm{~s}]$

Calculation example)
T1 to T4 can be calculated as follows.
$\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1=300 / 3000=0.1[\mathrm{~s}]$,
$\mathrm{T} 3=\mathrm{V} / \mathrm{a} 2=300 / 3000=0.1[\mathrm{~s}]$
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}$
$=\frac{300-0.5 \cdot 300 \cdot(0.1+0.1)}{300}$
$=0.90[\mathrm{~s}]$
$\mathrm{T} 4=0.05[\mathrm{~s}]$
Therefore, the cycle time can be obtained as follows.

$$
\begin{aligned}
\mathrm{T} & =\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4 \\
& =0.1+0.90+0.1+0.05 \\
& =\mathbf{1 . 1 5}[\mathbf{s}]
\end{aligned}
$$

## Step 3 Check the allowable moment.

Refer to "Dynamic Allowable Moment" graphs (Pages 127 and 128).

Selection example) Select the LEJS63S3B-300 from the graph on the right side. Confirm that the external force is 20 [N] or less.
(The external force is the resistance due to cable duct, flexible trunking or air tubing.)

<Speed-Work load graph> (LEJS63)

L : Stroke [mm]
V : Speed [mm/s]
a1: Acceleration $\left[\mathrm{mm} / \mathrm{s}^{2}\right.$ ]
a2: Deceleration $\left[\mathrm{mm} / \mathrm{s}^{2}\right.$ ]
T1: Acceleration time [s]
Time until reaching the set speed
T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
T4: Settling time [s]
Time until positioning is completed
T5: Resting time [s]
Time the product is not running
T6: Total time [s]
Total time from T1 to T5
Duty ratio: Ratio of T to T6 $T \div T 6 \times 100$

## Calculation of Guide Load Factor

1. Decide operating conditions.

Model: LEJS/LEJB
Size: 40/63
Mounting orientation: Horizontal/Bottom/Wall/Vertical

## Acceleration [mm/s²]: a

Work load [kg]: m
Work load center position [mm]: Xc/Yc/Zc
2. Select the target graph with reference to the model, size and mounting orientation.
3. Based on the acceleration and work load, obtain the overhang [mm]: Lx/Ly/Lz from the graph.
4. Calculate the load factor for each direction.

$$
\alpha \mathbf{x}=\mathrm{Xc} / \mathrm{Lx}, \alpha \mathbf{y}=\mathrm{Yc} / \mathrm{Ly}, \alpha \mathbf{z}=\mathrm{Zc} / \mathrm{Lz}
$$

5. Confirm the total of $\alpha \mathbf{x}, \alpha \mathbf{y}$ and $\alpha \mathbf{z}$ is 1 or less.
$\alpha x+\alpha y+\alpha z \leq 1$
When 1 is exceeded, please consider a reduction of acceleration and work load, or a
change of the work load center position and series.

## Example

1. Operating conditions

Model: LEJS
Size: 40
Mounting orientation: Horizontal
Acceleration [mm/s²]: 5000
Work load [kg]: 20
Work load center position [mm]: Xc=0, Yc=50, Zc=200
2. Select the graph on page 127, top and left side first row.

3. $L x=\mathbf{2 2 0} \mathbf{~ m m}, L y=210 \mathrm{~mm}, \mathrm{Lz}=\mathbf{4 3 0} \mathbf{~ m m}$
4. The load factor for each direction can be obtained as follows.
$\alpha x=\mathbf{0 / 2 2 0}=0$
$\alpha y=50 / 210=0.24$
$\alpha z=200 / 430=0.47$
5. $\alpha \mathbf{x}+\alpha \mathbf{y}+\alpha z=0.71 \leq 1$

## LEJ Series

AC Servo Motor Clean Room Specification

## Table Accuracy (Reference Value)

| Model | Traveling parallelism [mm] (Every 300 mm ) |  |
| :---: | :---: | :---: |
|  | 1)C side traveling <br> parallelism to A side <br> L2) D side traveling <br> parallelism to B side |  |
| LEJ $\square \mathbf{4 0}$ | 0.05 | 0.03 |
| LEJ $\square \mathbf{6 3}$ | 0.05 | 0.03 |

Note) Traveling parallelism does not include the mounting surface accuracy.

Table Displacement (Reference Value)

Note) This displacement is measured when a 15 mm aluminum plate is mounted and fixed on the table. (Table clearance is included.)

Electric Actuator/High Rigidity Slider Type AC Servo Motor LECY $\square$ Series Ball Screw Drive/LEJS(-M) Series Belt Drive/LEJB Series Model Selection
LEJS Series $>$ Page 136-1 LEJS-M Series $>$ Page 136-5 LEJB Series $>$ Page 141-1
The Cycle Time Graph, Work Load-Acceleration/Deceleration Graph, Dynamic Allowable Moment, Calculation of Guide Load Factor,
Selection Procedure and Table Accuracy/Displacement are the same as those of the LECS $\square$ AC servo motor. For details, refer to page 122 and onwards.

Step 2 Check the cycle time.
Step 3 Check the allowable moment.

## Selection Example

Operating conditions

- Work load: 60 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 300 [mm]
- Mounting orientation: Horizontal
- External force: 10 [ N ]

Check the speed-work load.
Select the product by referring to "Speed-Work Load Graph" (Page 131-2). Selection example) The LEJS63V7B-300 is temporarily selected based on the graph shown on the right side.
The regenerative resistor may be necessary.
Refer to page 131-2 for "Conditions for Regenerative Resistor (Guide)".

## Step 2 Check the cycle time.

Refer to method 1 for a rough estimate, and method 2 for a more precise value.
Method 1: Check the cycle time graph (Pages 122 and 123)
The graph is based on the maximum speed of each size.

## Method 2: Calculation

Cycle time $T$ can be found from the following equation.

- T1 and T3 can be obtained by the following equation. $\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1[\mathrm{~s}] \quad \mathrm{T} 3=\mathrm{V} / \mathrm{a} 2[\mathrm{~s}]$

The acceleration and deceleration values have upper limits depending on the workpiece mass and the duty ratio. Check that they do not exceed the upper limit, by referring to "Work load-Acceleration/Deceleration Graph (Guide)" (Pages 124 to 126).
For the ball screw type, there is an upper limit of the speed depending on the stroke. Check that if it does not exceed the upper limit, by referring to the specifications (Page 136-2).

- T2 can be found from the following equation.
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}[\mathrm{s}]$
- T4 varies depending on the motor type and load. The value below is recommended.
T4 = $0.05[\mathrm{~s}]$

Calculation example)
T1 to T4 can be calculated as follows.
$\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1=300 / 3000=0.1[\mathrm{~s}]$,
$\mathrm{T} 3=\mathrm{V} / \mathrm{a} 2=300 / 3000=0.1[\mathrm{~s}]$
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}$
$=\frac{300-0.5 \cdot 300 \cdot(0.1+0.1)}{300}$
$=0.90[\mathrm{~s}]$
$\mathrm{T} 4=0.05[\mathrm{~s}]$
Therefore, the cycle time can be obtained as follows.

$$
\begin{aligned}
\mathrm{T} & =\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4 \\
& =0.1+0.90+0.1+0.05 \\
& =\mathbf{1 . 1 5}[\mathbf{s}]
\end{aligned}
$$

## Step 3 Check the allowable moment.

Refer to "Dynamic Allowable Moment" graphs (Pages 127 and 128).

Selection example) Select the LEJS63V7B-300 from the graph on the right side. Confirm that the external force is 20 [N] or less.
(The external force is the resistance due to cable duct, flexible trunking or air tubing.)

|  | Type Note 9) |  |  | Non-magnetizing lock |  |  |  |  |  |
|  | Holding force [ N ] |  |  | 67 | 101 | 203 | 220 | 330 | 660 |
|  | Power consumption at $20^{\circ} \mathrm{C}$ [W] Note 10) |  |  | 6.3 |  |  | 7.9 |  |  |
|  | Rated voltage [V] |  |  | 24 VDC $_{-10 \%}^{0}$ |  |  |  |  |  |

Note 1) Please consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) For details, refer to "Speed-Work Load Graph (Guide)" on page 121.
Note 3) The allowable speed changes according to the stroke.
Note 4) A reference value for correcting an error in reciprocal operation.
Note 5) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 6) The power consumption (including the driver) is for when the actua-
tor is operating.
Note 7) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation. Note 8) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 9) Only when motor option "With lock" is selected.
Note 10) For an actuator with lock, add the power consumption for the lock. Note 11) Sensor magnet position is located in the table center. For detailed dimensions, refer to "Auto Switch Mounting Position" on page 142.
Note 12) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 13) For the manufacture of intermediate strokes, please contact SMC. (LEJS40/Manufacturable stroke range: 200 to 1200 mm , LEJS63/ Manufacturable stroke range: 300 to 1500 mm )
Note 14) The resolution will change depending on the driver type.

## Weight

*3 This is the distance within which the table can move when it returns to origin. Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
*4 The Z-phase first detecting position from the stroke end of the motor side

* The auto switch magnet is located in the table center.

## $\triangle$ Caution

1. During operation, the intermediate support mechanism emits a collision noise due to the structure.
2. Compared to the standard product, the entire length of the product will be longer for each stroke. For details, refer to the dimensions.
3. The stopper type origin position return method cannot be used as the return to origin method (due to the bumper as shown in Construction (4)).

Note 1）Please consult with SMC for non－standard strokes as they are pro－ duced as special orders．
Note 2）Check＂Speed－Work Load Graph（Guide）＂on page 131－2．
Note 3）The allowable speed changes according to the stroke．
Note 4）A reference value for correcting an error in reciprocal operation．
Note 5）Impact resistance：No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw． （Test was performed with the actuator in the ini－ tial state．）
Vibration resistance：No malfunction occurred in a test ranging be－ tween 45 to 2000 Hz ．Test was performed in both an axial direction and a perpendicular di－ rection to the lead screw．（Test was performed with the actuator in the initial state．）

Note 6）The power consumption（including the driver）is for when the actua－ tor is operating．
Note 7）The standby power consumption when operating（including the driver）is for when the actuator is stopped in the set position during the operation．
Note 8）The maximum instantaneous power consumption（including the driver）is for when the actuator is operating．
Note 9）Only when motor option＂With lock＂is selected．
Note 10）For an actuator with lock，add the power consumption for the lock．
Note 11）Sensor magnet position is located in the table center．For detailed dimensions，refer to＂Auto Switch Mounting Position＂．
Note 12）Do not allow collisions at either end of the table traveling distance． Additionally，when running the positioning operation，do not set within 2 mm of both ends．
Note 13）For the manufacture of intermediate strokes，please contact SMC． （LEJS40／Manufacturable stroke range： 200 to 1200 mm ，LEJS63／ Manufacturable stroke range： 300 to 1500 mm ）

|  | Power consumption at $20^{\circ} \mathrm{C}$ [W] ${ }^{\text {Note 9) }}$ |  | 6.3 | 7.9 |
|  | Rated voltage [V] |  | $24 \mathrm{VDC}_{-10 \%}^{0}$ |  |

Note 1) Please consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) For details, refer to "Speed-Work Load Graph (Guide)" on page 121.
Note 3) A reference value for correcting an error in reciprocal operation.
Note 4) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 5) The power consumption (including the driver) is for when the actuator is operating.
Note 6) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 7) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 8) Only when motor option "With lock" is selected.
Note 9) For an actuator with lock, add the power consumption for the lock.
Note 10) Sensor magnet position is located in the table center. For detailed dimensions, refer to "Auto Switch Mounting Position" on page 142.
Note 11) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 12) For the manufacture of intermediate strokes, please contact SMC. (LEJB40/Manufacturable stroke range: 200 to 2000 mm , LEJB63/Manufacturable stroke range: 300 to 3000 mm )
Note 13) The resolution will change depending on the driver type.

Note 1) Please consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) Check "Speed-Work Load Graph (Guide)" on page 131-2.
Note 3) A reference value for correcting an error in reciprocal operation.
Note 4) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 5) The power consumption (including the driver) is for when the actuator is operating.
Note 6) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 7) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 8) Only when motor option "With lock" is selected.
Note 9) For an actuator with lock, add the power consumption for the lock.
Note 10) Sensor magnet position is located in the table center.
For detailed dimensions, refer to "Auto Switch Mounting Position".
Note 11) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 12) For the manufacture of intermediate strokes, please contact SMC.
(LEJB40/Manufacturable stroke range: 200 to 2000 mm , LEJB63/Manufacturable stroke range: 300 to 3000 mm )

## LEJ Series <br> Auto Switch Mounting

## Auto Switch Mounting Position

| Model | Size | A | B | C | Operating range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| LEJS40 | 40 | 77 | 80 | 160 | 5.5 |
| LEJB40 |  |  |  |  | 5.0 |
| LEJS63 | 63 | 83 | 86 | 172 | 7.0 |
| LEJB63 |  |  |  |  | 6.5 |

Note) The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations (as much as $\pm 30 \%$ ) depending on the ambient environment.

## Auto Switch Mounting

When mounting the auto switches, they should be inserted into the actuator's auto switches mounting groove from the direction shown in the drawing on the below. Once in the mounting position, use a flat head watchmaker's screwdriver to tighten the included auto switch mounting screw.

Auto Switch Mounting Screw Tightening Torque [ $\mathrm{N} \cdot \mathrm{m}$ ]

| Auto switch model | Tightening torque |
| :---: | :---: |
| D-M9 $\square \mathbf{( V )}$ |  |
| D-M9 <br> D-M W (V) | 0.10 to 0.15 |

Note) When tightening the auto switch mounting screw, use a watchmaker's screwdriver with a handle diameter of about 5 to 6 mm .

## Solid State Auto Switch Direct Mounting Type D-M9N(V)/D-M9P(V)/D-M9B(V) C $\epsilon$

## Grommet

- 2-wire load current is reduced ( 2.5 to 40 mA ).
- Using flexible cable as standard spec.

## ©Caution

## Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications the products conforming to the the products conforming
international standards.

# LEJ Series Electric Actuator/ Specific Product Precautions 1 

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

## Design

## $\triangle$ Caution

1. Do not apply a load in excess of the specification limits.

Select a suitable actuator by work load and allowable moment. If the product is used outside of the specification limits, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.
2. Do not use the product in applications where excessive external force or impact force is applied to it.
The product can be damaged.
The components including the motor are manufactured to precise tolerances. So that even a slight deformation may cause a malfunction or seizure.

## Selection

## $\triangle$ Warning

1. Do not increase the speed in excess of the specification limits.

Select a suitable actuator by the relationship of the allowable work load and speed, and the allowable speed of each stroke. If the product is used outside of the specification limits, it will have adverse effects such as creating noise, degrading accuracy and shortening the life of the product.
2. When the product repeatedly cycles with partial strokes ( 100 mm or less), lubrication can run out. Operate it at a full stroke at least once a day or every a thousand cycles.
3. When external force is applied to the table, it is necessary to add external force to the work load as the total carried load for the sizing.
When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table increases and may lead to operational failure of the product.

## Handling

## $\triangle$ Caution

1. Do not allow the table to hit the end of stroke.

When incorrect instructions are inputted, such as using the product outside of the specification limits or operation outside of actual stroke through changes in the controller/driver setting and/or origin position, the table may collide against the stroke end of the actuator. Check these points before use.
If the table collides against the stroke end of the actuator, the guide, belt or internal stopper can be broken. This may lead to abnormal operation.

Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.
2. The actual speed of this actuator is affected by the work load and stroke.
Check specifications with reference to the model selection section of the catalog.
3. Do not apply a load, impact or resistance in addition to the transferred load during return to origin.
4. Do not dent, scratch or cause other damage to the body and table mounting surfaces.
This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.
5. Do not apply strong impact or an excessive moment while mounting the product or a workpiece.
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
6. Keep the flatness of mounting surface should be within $0.1 \mathrm{~mm} / 500 \mathrm{~mm}$.

Unevenness of a workpiece or base mounted on the body of the product may cause play in the guide and an increase in the sliding resistance.
In the case of overhang mounting (including cantilever), to avoid deflection of the actuator body, use a support plate or support guide.
7. When mounting the actuator, use all mounting holes.
If all mounting holes are not used, it influences the specifications, e.g., the amount of displacement of the table increases.
8. Do not hit the table with the workpiece in the positioning operation and positioning range.
9. Do not apply external force to the dust seal band.

Particularly during the transportation

# LEJ Series Electric Actuator/ Specific Product Precautions 2 

4
Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 8 for Electric Actuator Precautions.

## Handling

## . Caution

10. When mounting the product, use screws with adequate length and tighten them with adequate torque.

Tightening the screws with a higher torque than recommended may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

To prevent the workpiece retaining screws from touching the body, use screws that are 0.5 mm or shorter than the maximum screw-in depth. If long screws are used, they can touch the body and cause a malfunction.
11. Do not operate by fixing the table and moving the actuator body.
12. The belt drive actuator cannot be used vertically for applications.
13. Vibration may occur during operation, this could be caused by the operating conditions.
If it occurs, adjust response value of auto tuning of driver to be lower.
During the first auto tuning noise may occur, the noise will stop when the tuning is complete.
14. When mounting the actuator using the body mounting reference plane, use a pin. Set the height of the pin to be 5 mm or more because of round chamfering. (Recommended height 6 mm )

15. When the fluctuation of load is caused during operation, malfunction/noise/alarm may occur. (In case of AC servo motor)
The tuning of gain may not suit for fluctuation load. Adjust the gain properly by following the manual of driver.

## Maintenance

## $\triangle$ Warning

## Maintenance frequency

Perform maintenance according to the table below.

| Frequency | Appearance check | Internal check | Belt check |
| :--- | :---: | :---: | :---: |
| Inspection before <br> daily operation | $\bigcirc$ | - | - |
| Inspection every <br> 6 months $/ 1000 \mathrm{~km} /$ <br> 5 million cycles* | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

* Select whichever comes first.

## - Items for visual appearance check

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

- Items for internal check

1. Lubricant condition on moving parts.

* For lubrication, use lithium grease No. 2.

2. Loose or mechanical play in fixed parts or fixing screws.

## - Items for belt check

Stop operation immediately and replace the belt when belt appear to be below. Further, ensure your operating environment and conditions satisfy the requirements specified for the product.
a. Tooth shape canvas is worn out.

Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.
b. Peeling off or wearing of the side of the belt

Belt corner becomes round and frayed thread sticks out.
c. Belt partially cut

Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.
d. Vertical line of belt teeth

Flaw which is made when the belt runs on the flange.
e. Rubber back of the belt is softened and sticky.
f. Crack on the back of the belt

[^0]:    * Maximum speed/acceleration/deceleration values graph for each stroke
