GENERAL INFORMATION

The WW Series switching mechanism is a non-snap double break shorting bar type construction. One, two or three circuit versions are available.

The three-circuit unit has two poles. The term "pole" denotes the number of completely separate circuits that can pass through the switch at one time. On a three-circuit switch in the unoperated condition (see drawing) circuit #2 is closed and circuit #1 and #3 are open. As the plunger is depressed, circuit #2 opens and circuit #1 and #3 are closed. The switch is two-pole since it makes and breaks two separate circuits (#1 and #3). When the plunger is released, circuit #1 and #3 are broken and circuit #2 is closed.

FEATURES

- Snap-in panel mounting
- Variety of terminal sizes
- Accepts quick-connect insulated terminals
- 10-16 amps electrical rating at 125 or 250 VAC depending on number of circuits and termination
- Same panel cutout as double-pole DM switch
- Quick-connect D7 and D9 termination complies with VDE requirements for 3mm air gap
- Switches with plunger guards and D7, D9 terminations are VDE approved
- UL recognized, CSA certified
- Meets UL's 100,000 operations requirement for operator-accessible interlock switches
- Covered under UL standard 508 Industrial Motor Controls

Plunger guard version and cheat-key.

With cheat-key installed.

WWs are available with or without a plunger guard. A cheat-key can be furnished for use with the plunger guard to maintain the switch plunger in the depressed condition (see photos →).

MOUNTING DIMENSIONS (For reference only)

NOTE: Terminals will accept quick-connect receptacles available from AMP, Hollingsworth and others.
