

Rack and pinion drives

In cooperation with

Rack and pinion drives

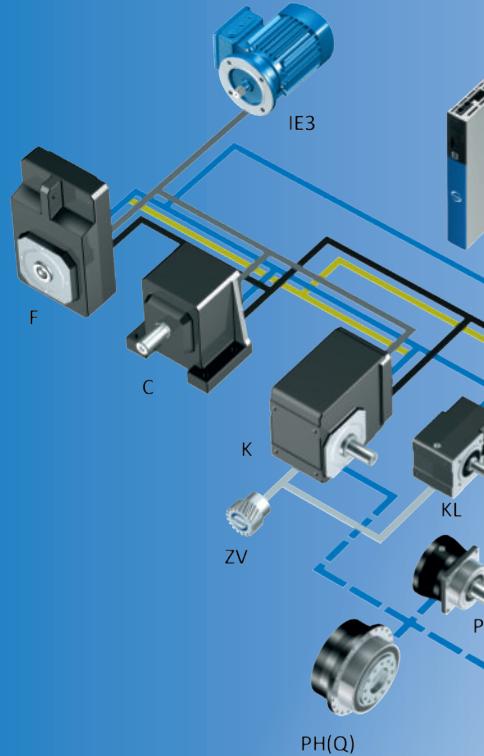

One partner. All the possibilities.

STOBER has developed and produced excellent drive technology since 1934 and is active internationally with around 1000 employees at 12 locations. **STOBER** impresses machine manufacturers in wide-ranging industries and markets around the world with tailor-made, highly efficient drive systems for demanding movements.

"Our vision is to be the preferred partner for perfect movement."

- Rainer Wegener, CEO of STÖBER Antriebstechnik.

Rack and pinion drives – what you can expect!

From high flexibility to high force, the innovative system concept for rack and pinion drives from STOBER means compact, easy-to-use systems that are ready to install and adapted to various demands regarding load capacity and precision. Learn more about our special highlights: the very flexible and efficient ZV series as well as the ZTRS series with supporting bearing holder – for maximum feed force! It could not be more diverse.

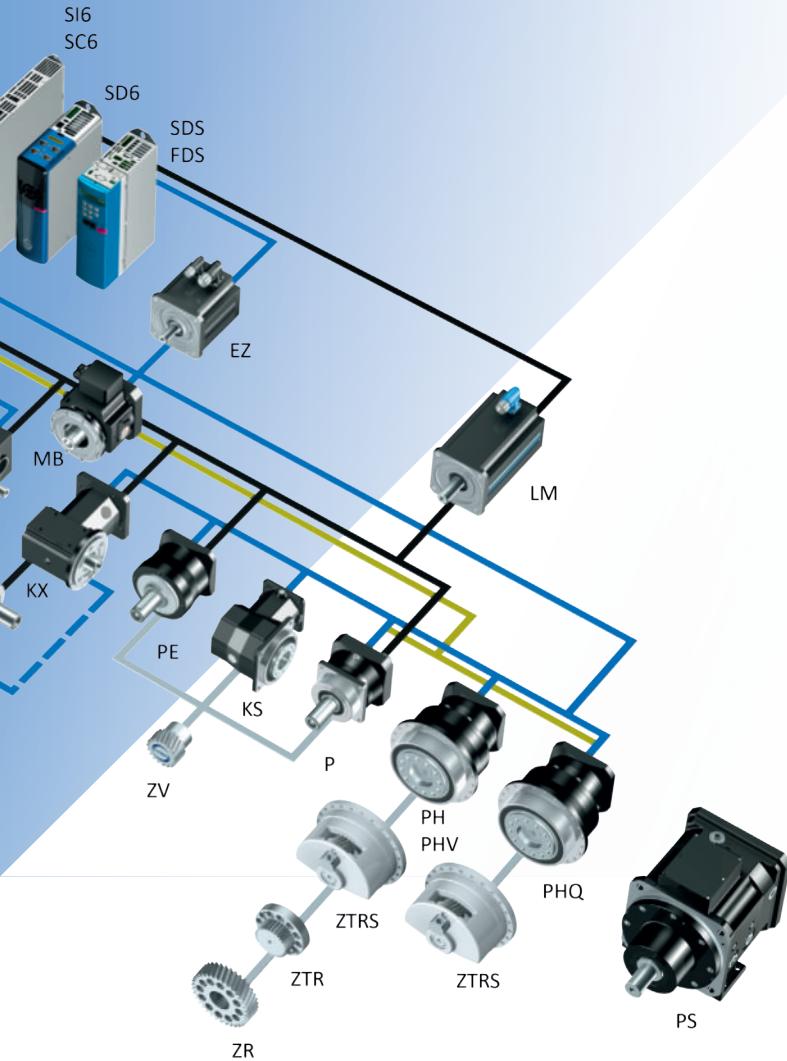

At home in the world of demanding motion

Gear units

Geared motors

Motors

Cables and drive controllers

Everything from a single source.

The STOBER drive system consisting of gear units, motors, cables and drive controllers has a modular design and is freely scalable—for tailor-made, compact and powerful machine concepts. It can be adapted to your individual requirements and combined as needed in nearly all industries and applications areas.

We check every single component and how it works together with others, taking on the responsibility for the complete drive train. For you, this means that one contact partner, certified operating safety and maximum availability are guaranteed.

Need special solutions?

Numerous one-of-a-kind product highlights and project-related adjustments make it possible. With a holistic approach to your specific task, we work together on individualized solutions that are optimally coordinated to your requirements. Dedicated and solution-oriented in the support of your visions and projects.

STOBER moves integrally and precisely.

We put ideas in motion with passion and a great deal of dedication. In the process, we rely on our decades of experience and an exceptionally broad range of products. Our customers benefit from precise, practical system solutions with uncompromising quality and expert individual consultation.

STOBER moves as a team and with personality.

As a family-owned company, it is very important to us to maintain close relationships and treat each other with trust. We put people first.

We are committed to the well-being of our employees, identify with the expectations of our customers, and show personal commitment to mutual success.

"We have installed gear units, motors and drive controllers from STOBER in nearly all our systems. STOBER supports us in new projects from the first stroke of a pencil in the design phase until commissioning. Our years of cooperation are shaped by openness and honesty and emanate a rather special spirit. The technical consulting, the support—that is real, experienced partnership"

- Jürgen Leicht, Managing Partner of Leicht Stanzautomation.

Working together. Worldwide. Successfully.

With an eye to the future, STOBER is facing the challenges of digitalization and investing in integrated solutions and a strong global presence in production, sales and service. STOBER China was founded at the end of 2019. As a result, we are present in more than 40 countries around the world at 12 locations and with 80 service partners.

F_{f2acc}	20 – 79 kN
$V_{f2maxZB}$	0.2 – 4.7 m/s
Δs	8 – 56 µm

2.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 2.5.4]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For rack and pinion drives with reduced backlash, higher feed forces are possible. For this and all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

2.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

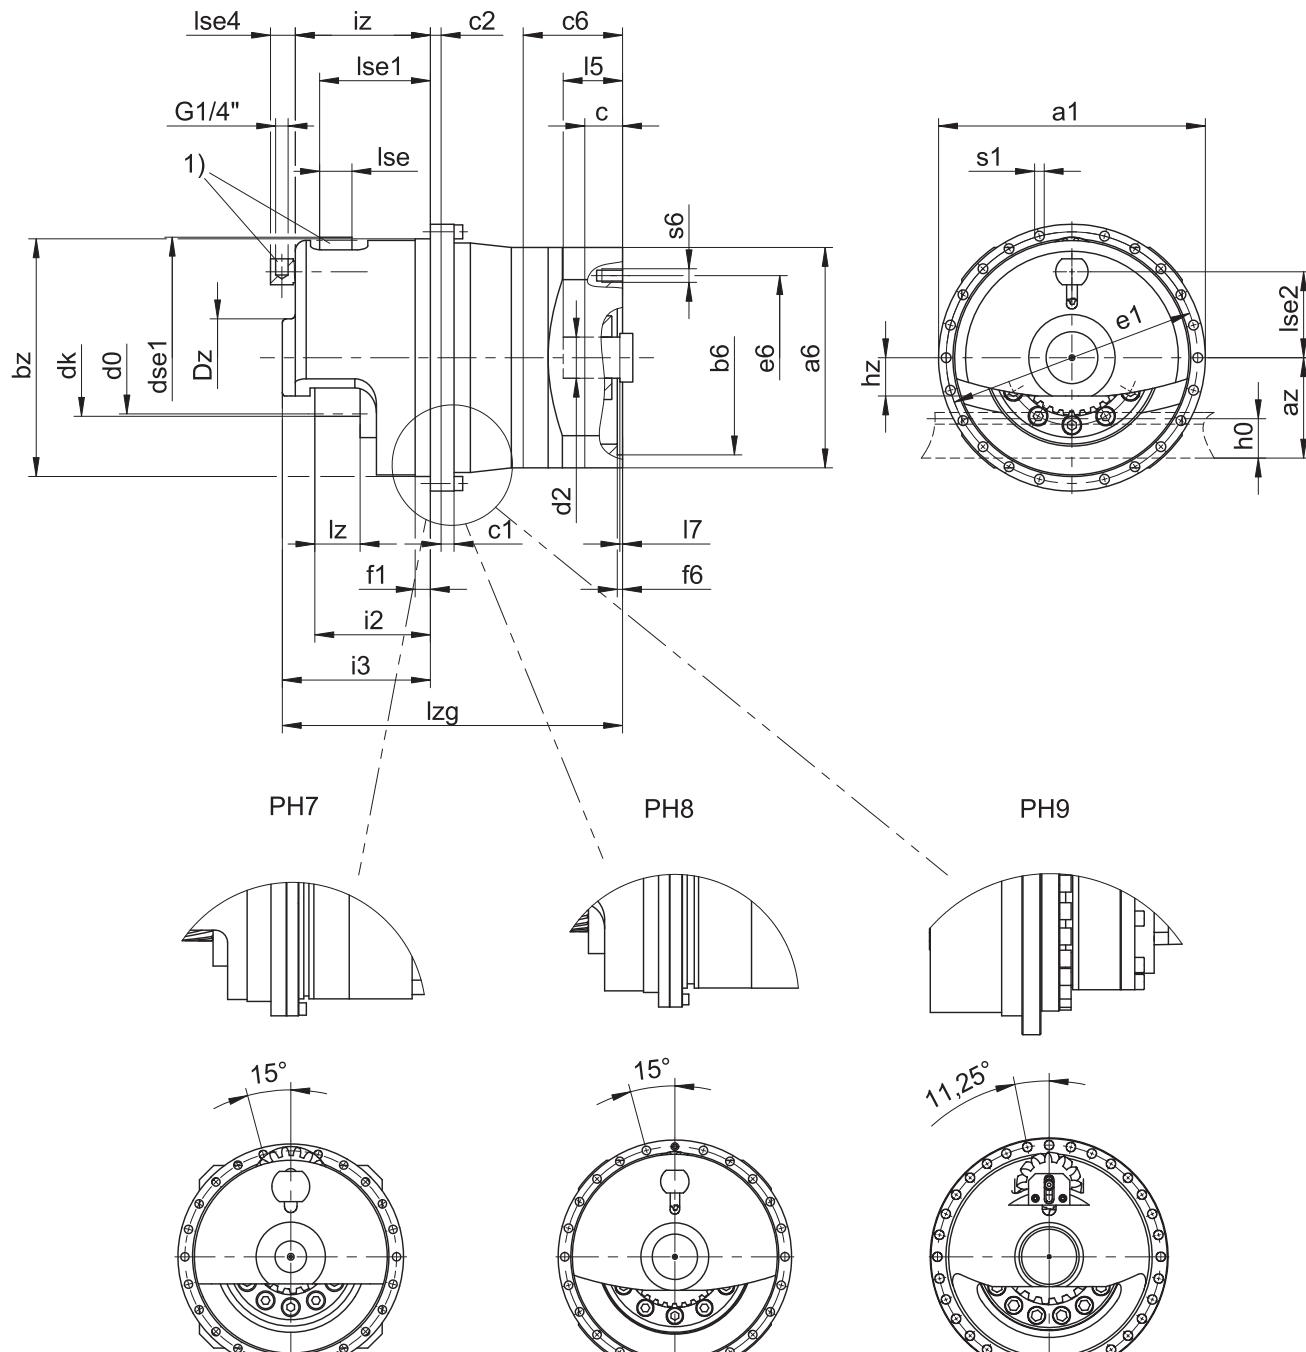

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6, l5 and lzg are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME, MEL and MF in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

2.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

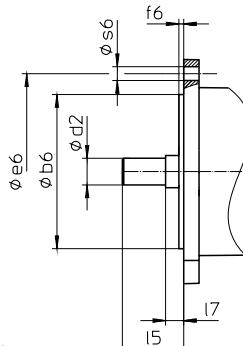

Example code

Z	TRS	3	17	S	PH	7	3	1	S	F	S	S	0050	ME
---	-----	---	----	---	----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
TRS	Design	Screwed flange pinion with supporting bearing holder
3	Module	$m_n = 3$ (example)
17	Number of teeth	$z = 17$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
SF		Helical (left-hand $19^\circ 31' 42''$) with felt gear for lubrication
PH	Type	Planetary gear unit
7	Size	7 (example)
3	Generation	Generation 3
4		Generation 4
1	Stages	Single-stage
2		Two-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
V		Reinforced bearing (PH3 – PH5)
S	Backlash	Standard
R		Reduced
0050	Transmission ratio ($i \times 10$)	$i = 5$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MF		Motor adapter with FlexiAdapt coupling
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

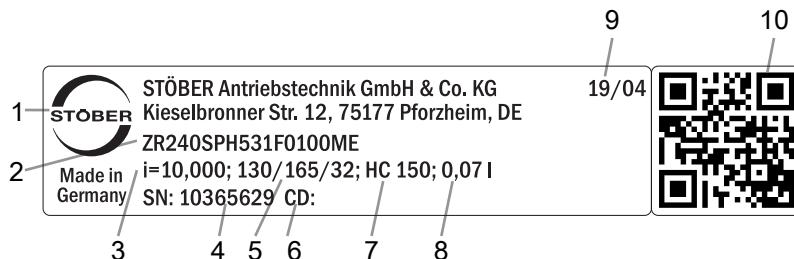

- Position of the gear rack, see the chapter [▶ 2.5.7]
- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 2.6.3]
- Radial runout $\leq 10 \mu\text{m}$ (optional)
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request

- Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL/MF motor adapter (option)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 2.5.1].

2.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

2.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

2.5 Product description

2.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

KX right-angle input with MF motor adapter

K right-angle input with ME motor adapter

MB motor adapter

Catalog ID 443137_en

Catalog ID 443286_en

On request

On request

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

2.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

2.5.3 Motor adapter with FlexiAdapt coupling (MF)

In this chapter, you will find a description of the FlexiAdapt coupling.

Properties:

- Fast and easy motor attachment
- Rugged, laser-welded bellow coupling with expanding function
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Motor shaft decoupled from axial forces
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 2: FlexiAdapt coupling

2.5.4 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gearing quality is 5.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

2.5.5 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

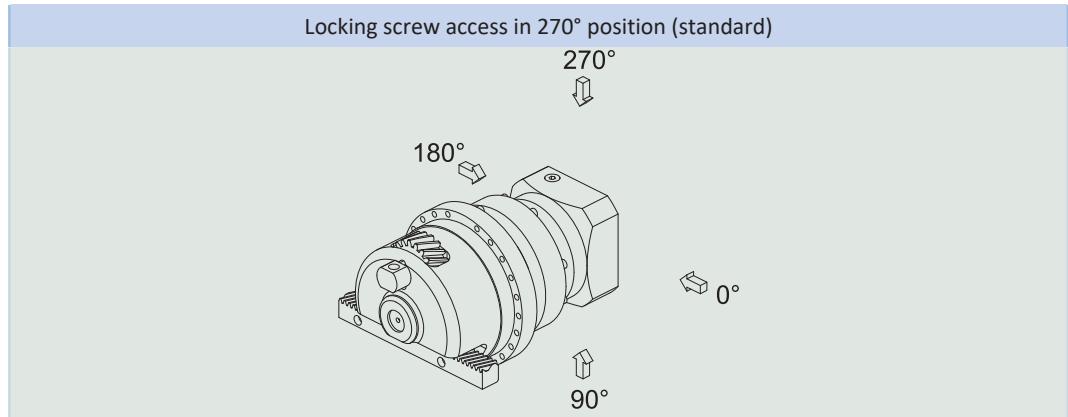

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot ϕ_{BZ} . The machine-side fit must be H7.

2.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

2.5.7 Position of locking screw access

The access hole for the motor coupling locking screw in the standard version is in the 270° position. Indicate variations for your rack and pinion drive in the order.

Note that the access hole for the motor coupling locking screw also rotates when the gear rack is rotated to another position.

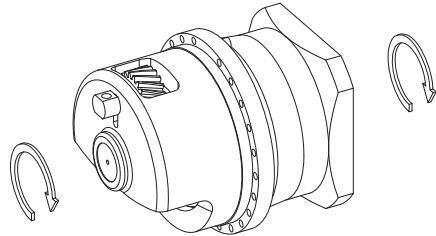

2.5.8 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

² Observe the protection class of all the components.

2.5.9 Direction of rotation

The input and output rotate in the same direction.

2.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

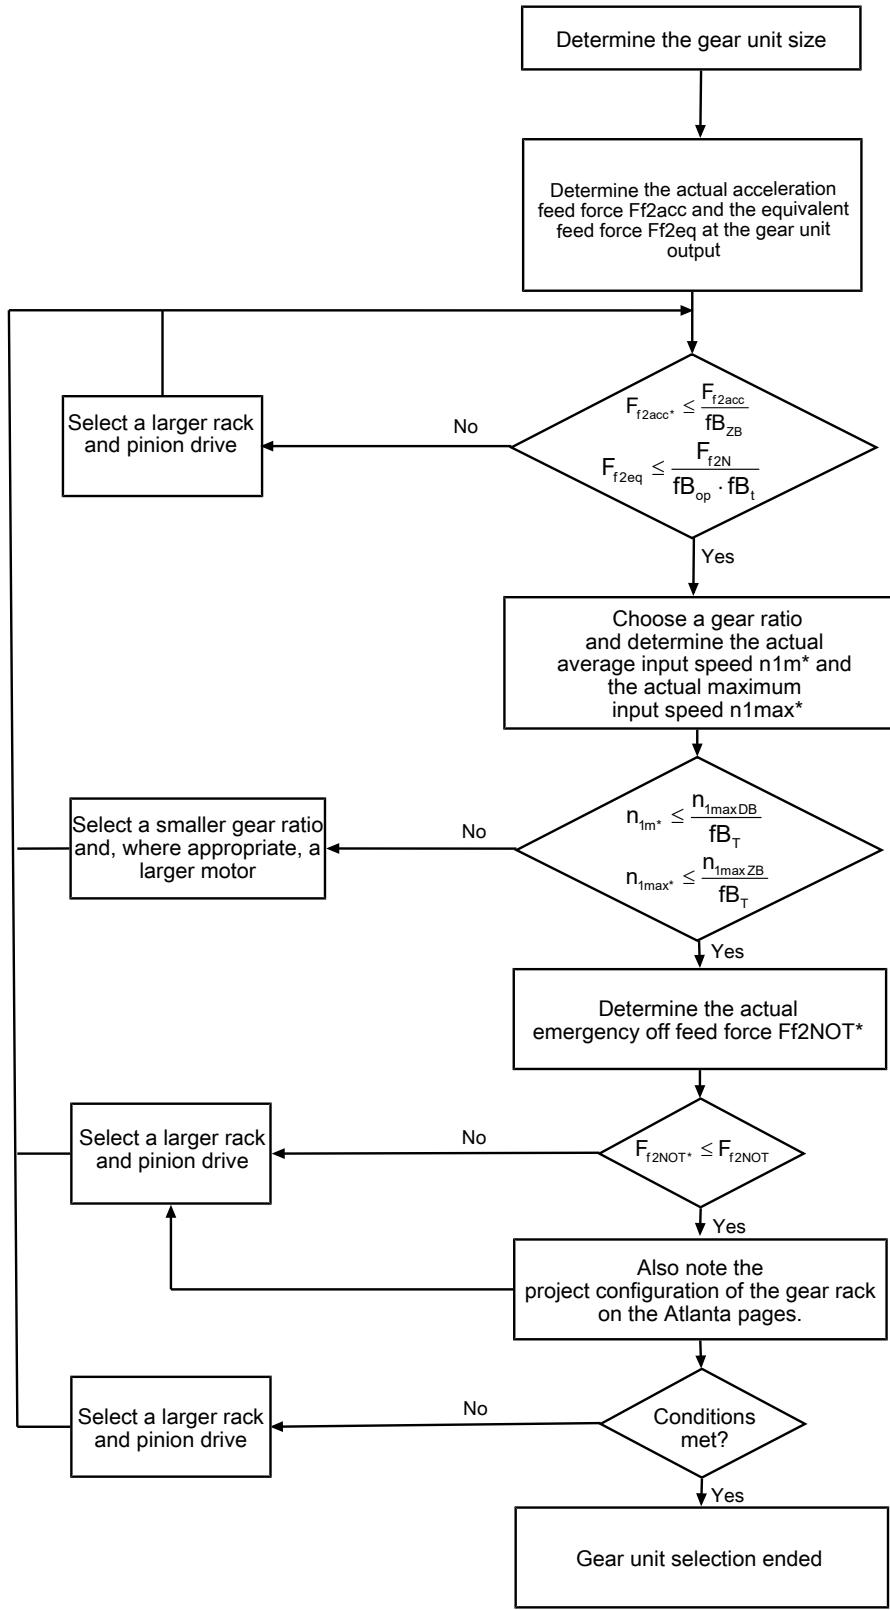

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

2.6.1 Drive selection

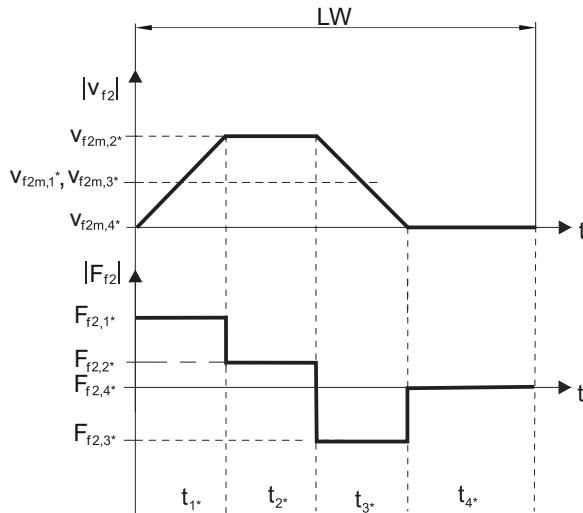

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_{zB} can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	≤ 20 °C	0.9
	≤ 30 °C	1.0
	≤ 40 °C	1.15
Motor with convection cooling	≤ 20 °C	1.0
	≤ 30 °C	1.1
	≤ 40 °C	1.25

Notes

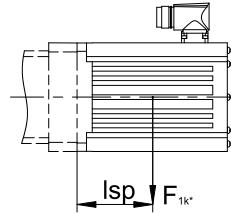

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc} , F_{f2NOT}) in the selection tables.

2.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PH331_ME	20
PH332_ME	10
PH431_ME	40
PH432_ME	20
PH531_ME	80
PH532_ME	40
PH731_ME	200
PH732_ME	80
PH831_ME	400
PH832_ME	200
PH942_ME	400
PH1042_ME	400

The values also apply to the MEL and MF motor adapters.

2.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

2.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

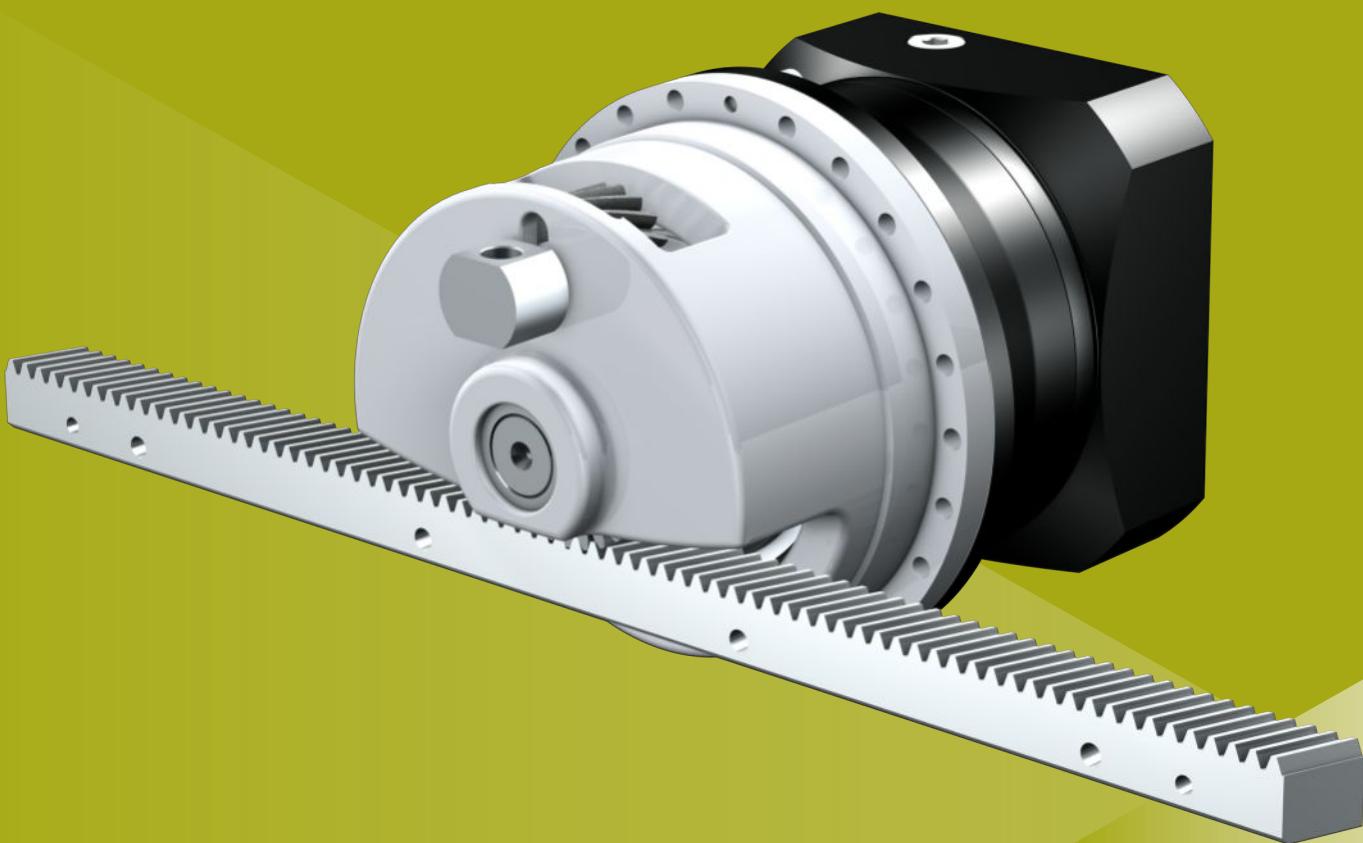

Enter the ID of the documentation in the Search term field.

3.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 3.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

3.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

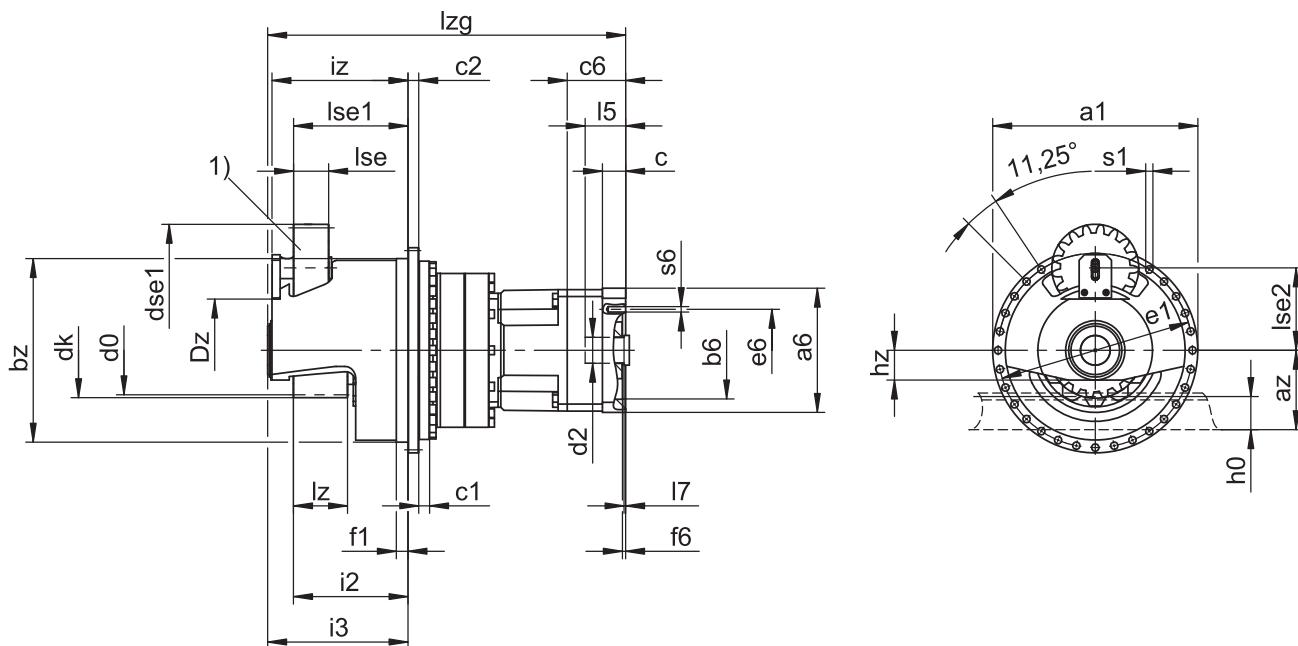

Dimension az in the tables of dimensions applies to Atlanta gear racks. In general: $az = \frac{1}{2} d_0 + h_0 + x * m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

1) Felt gear for lubrication (option)

Output dimensions

Type	m_n	$\varnothing a_1$	a_z	$\varnothing b_z$	c_1	c_2	d_0	d_k	d_{se1}	D_z	$\varnothing e_1$	f_1	i_2	i_3	iz	h_0	h_z	l_z	lse	lse_1	lse_2	$\varnothing s_1$	x
ZTRS819SPHQ10_	8	380	151.64	340 _{h7}	20	20	161.28	177.3	160.0	110	360	21.5	212	260	251.9	71	55	100	65	211.7	152.8	13.5	0.00

Example dimensions for the motor connection + total length

Type	$\varnothing b_6$	$\varnothing e_6$	$\varnothing d_{2max}$	l_5	$\square a_6$	c	c_6	f_6	l_7	l_zg	s_6
ZTRS8_PHQ1042_ME	180 ^{h7}	215	60	85	230	43	91.5	6.0	10.5	581.5	M12
ZTRS8_PHQ1043_ME	180 ^{h7}	215	48	83	204	35	80.5	5.5	8.5	662.5	M12

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c_6 , l_5 and l_zg are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

3.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

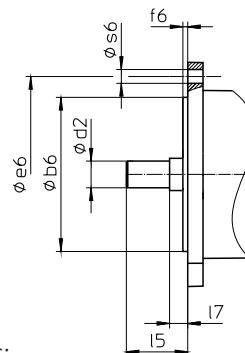

Example code

Z	TRS	8	19	S	PHQ	10	4	3	S	F	S	S	1680	ME
---	-----	---	----	---	-----	----	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
TRS	Design	Screwed flange pinion with supporting bearing holder
8	Module	$m_n = 8$ (example)
19	Number of teeth	$z = 19$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
SF		Helical (left-hand $19^\circ 31' 42''$) with felt gear for lubrication
PHQ	Type	Planetary gear unit
10	Size	10 (example)
4	Generation	Generation 4
2	Stages	Two-stage
3		Three-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
S	Backlash	Standard
1680	Transmission ratio ($i \times 10$)	$i = 168$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

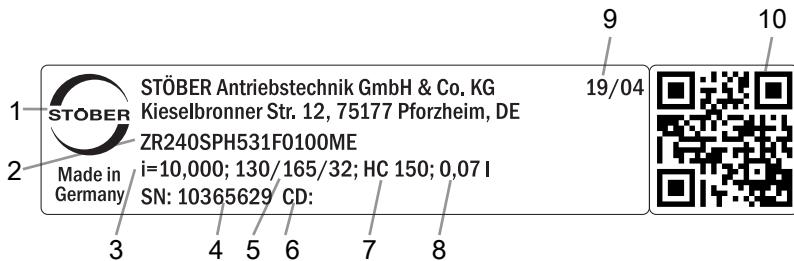

- Mounting position (for three-stage gear units), see the chapter [▶ 3.5.6]
- Position of the gear rack, see the chapter [▶ 3.5.7]
- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 3.6.3]
- Radial runout $\leq 10 \mu\text{m}$ (optional)
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL motor adapter (optional)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 3.5.1].

¹You can find more details in the catalog for ServoStop servo gear unit with brake ID 443234.

3.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

3.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

3.5 Product description

3.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

K right-angle input with
ME motor adapter

MB motor adapter

Catalog ID 443137_en

Catalog ID 443286_en

On request

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

3.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

3.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gear ing quality is 5.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

3.5.4 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot øbz. The machine-side fit must be H7.

3.5.5 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate. The filling volume and the structure of the gear units depend on the mounting position.

Only install the gear units in the intended mounting position! Reposition the gear units only after consulting STOBER. Otherwise, STOBER assumes no liability for the gear units.

You will receive lubricants for use in the food industry upon request.

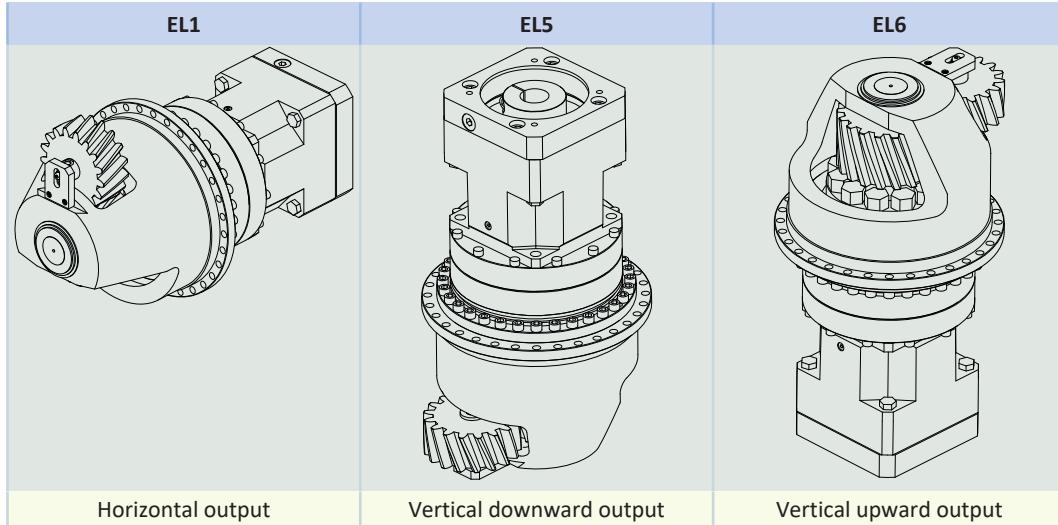

3.5.5.1 Rack and pinion drive lubrication

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

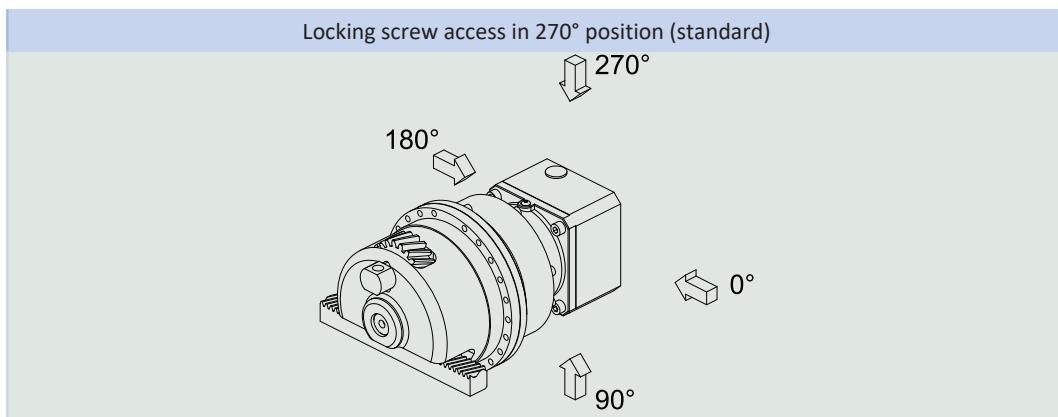

3.5.6 Mounting positions

The following table shows the standard mounting positions.

Please indicate the mounting position when ordering 3-stage gear units.

3.5.7 Position of locking screw access

The access hole for the motor coupling locking screw in the standard version is in the 270° position. Indicate variations for your rack and pinion drive in the order.

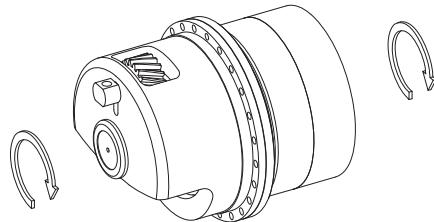

Note that the access hole for the motor coupling locking screw also rotates when the gear rack is rotated to another position.

3.5.8 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

3.5.9 Direction of rotation

The input and output rotate in the same direction.

3.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

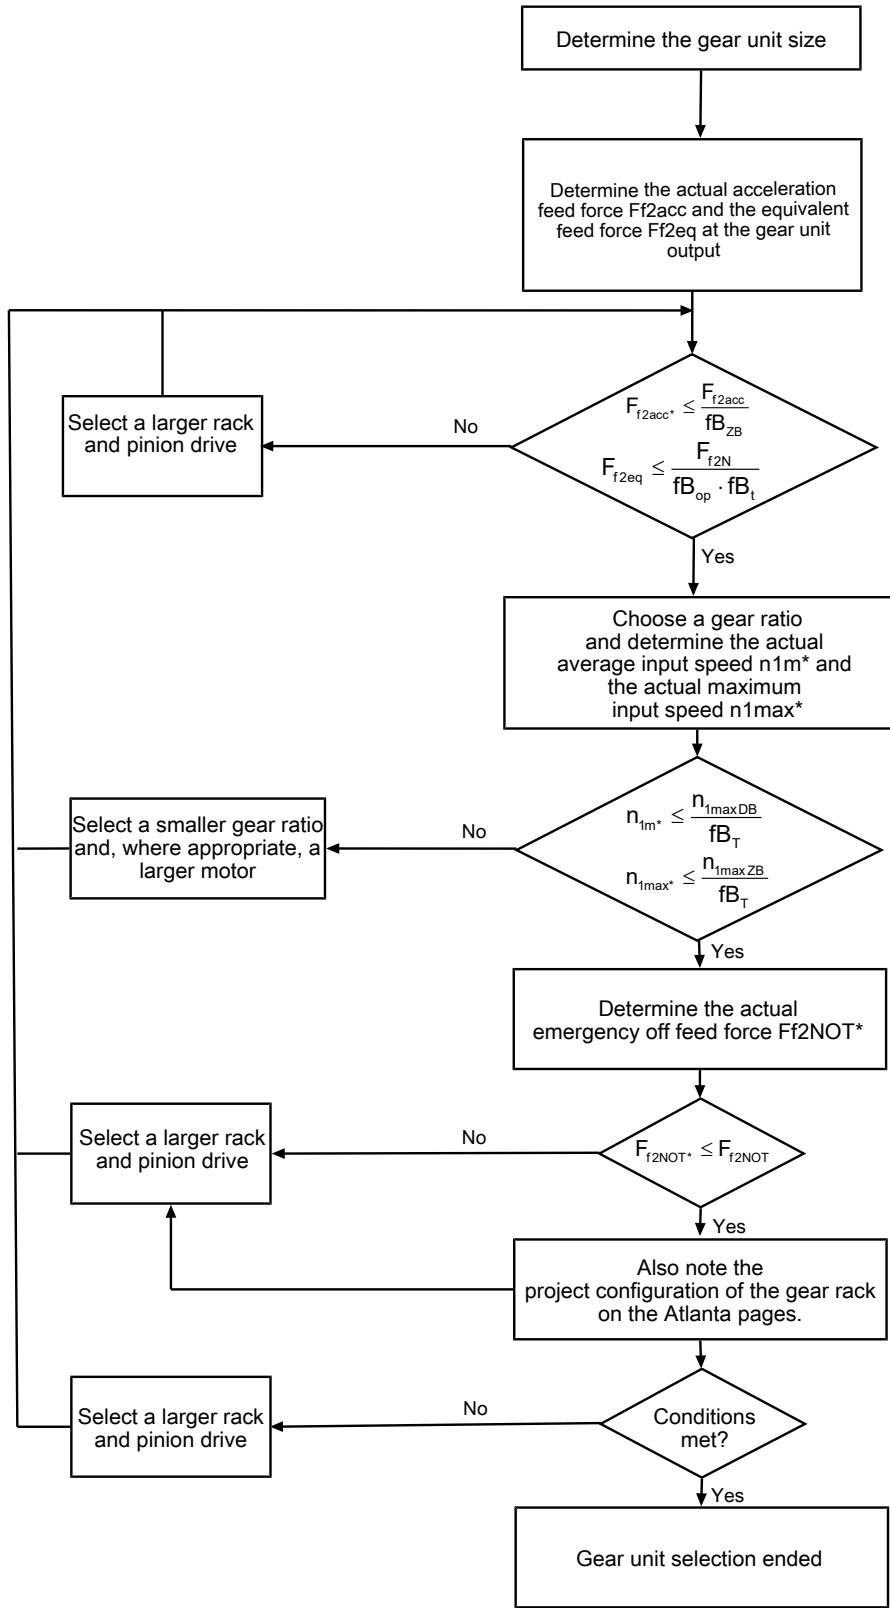

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

3.6.1 Drive selection

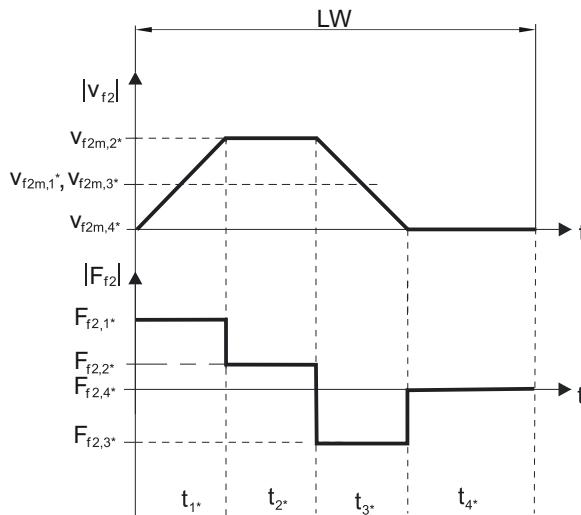

Refer to the selection tables for the values for i , n_{1maxDB} , n_{1maxZB} , F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_ZB can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{im*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

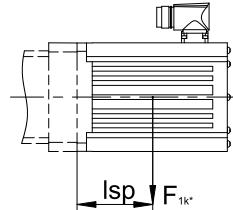

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

3.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PHQ431_ME	40
PHQ432_ME	20
PHQ531_ME	80
PHQ532_ME	40
PHQ731_ME	200
PHQ732_ME	80
PHQ733_ME	40
PHQ831_ME	400
PHQ832_ME	200
PHQ833_ME	80
PHQ942_ME	400
PHQ943_ME	200
PHQ1042_ME	800
PHQ1043_ME	400
PHQ1142_ME	1200
PHQ1143_ME	400
PHQ1242_ME	1800
PHQ1243_ME	800

The values also apply to the MEL and MF motor adapters.

3.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

3.7 Additional documentation

Additional documentation related to the product can be found at

4.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 4.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

4.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

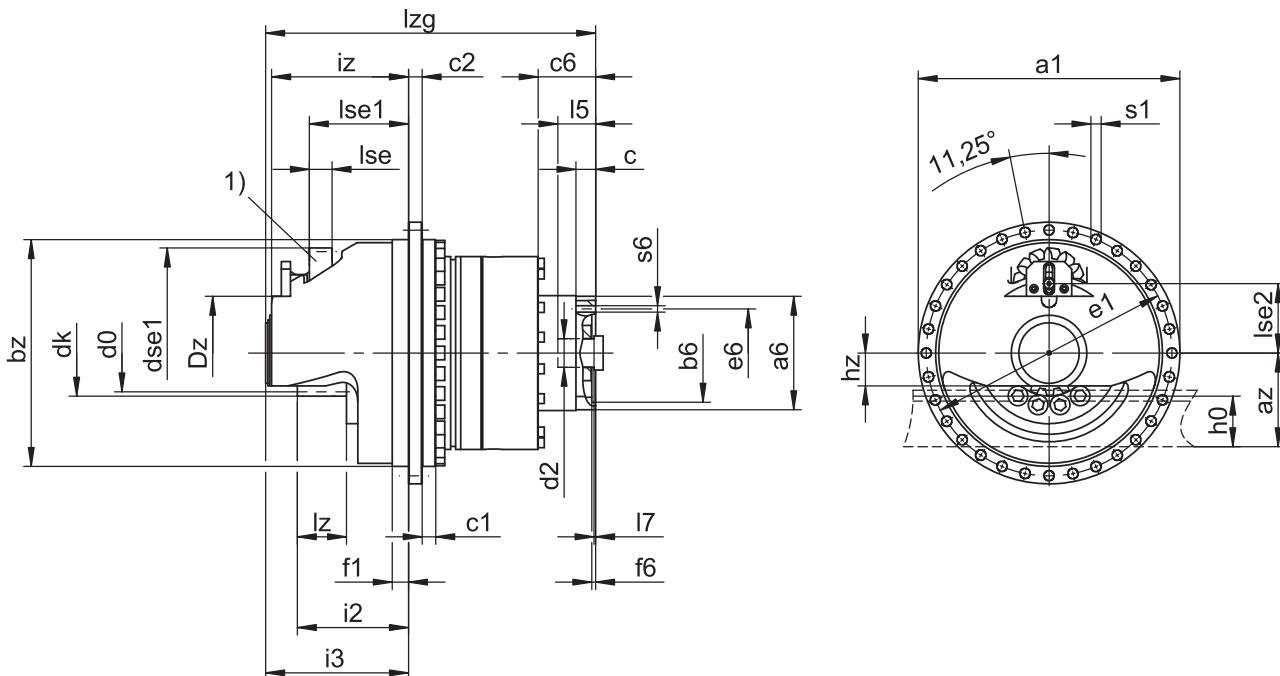

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

1) Felt gear for lubrication (option)

Output dimensions

Type	m_n	$\varnothing a_1$	a_z	$\varnothing b_z$	c_1	c_2	d_0	d_k	dse_1	D_z	$\varnothing e_1$	f_1	i_2	i_3	i_z	h_0	h_z	l_z	lse	lse_1	lse_2	$\varnothing s_1$	x

Example dimensions for the motor connection + total length

Type	$\varnothing b_6$	$\varnothing e_6$	$\varnothing d_{2max}$	l_5	$\square a_6$	c	c_6	f_6	l_7	l_zg	s_6
ZTRS5_PHV9_ME	130^{H7}	165	38	61	150	26	66	5.5	4.5	425.0	M10
ZTRS6_PHV9_ME	130^{H7}	165	38	61	150	26	66	5.5	4.5	435.0	M10
ZTRS8_PHV9_ME	130^{H7}	165	38	61	150	26	66	5.5	4.5	450.7	M10

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c_6 , l_5 and l_zg are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

4.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

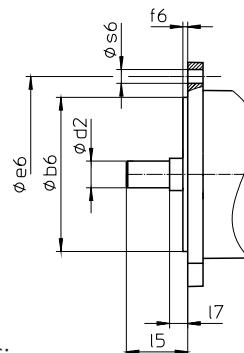

Example code

Z	TRS	6	20	S	PHV	9	4	3	S	F	S	S	0910	ME
---	-----	---	----	---	-----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
TRS	Design	Screwed flange pinion with supporting bearing holder
6	Module	$m_n = 6$ (example)
20	Number of teeth	$z = 20$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
SF		Helical (left-hand $19^\circ 31' 42''$) with felt gear for lubrication
PHV	Type	Planetary gear unit
9	Size	9 (example)
4	Generation	Generation 4
3	Stages	Three-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
S	Backlash	Standard
R		Reduced (PHV9)
0910	Transmission ratio ($i \times 10$)	$i = 91$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

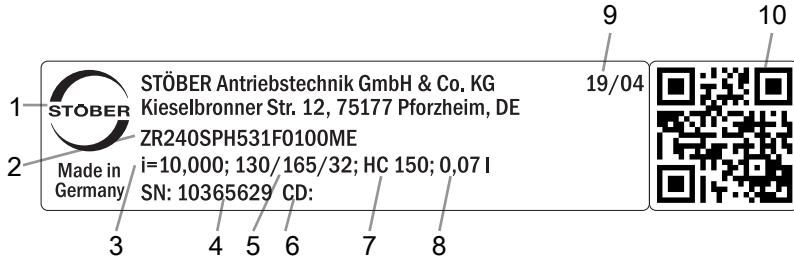

- Position of the gear rack, see the chapter [▶ 4.5.6]
- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 4.6.3]
- Radial runout $\leq 10 \mu\text{m}$ (optional)
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL motor adapter (optional)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 4.5.1].

¹You can find more details in the catalog for ServoStop servo gear unit with brake ID 443234.

4.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

4.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

4.5 Product description

4.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

Catalog ID 443137_en

Catalog ID 443286_en

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

4.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

4.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gear ing quality is 5.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

4.5.4 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot øbz. The machine-side fit must be H7.

4.5.5 Lubricants

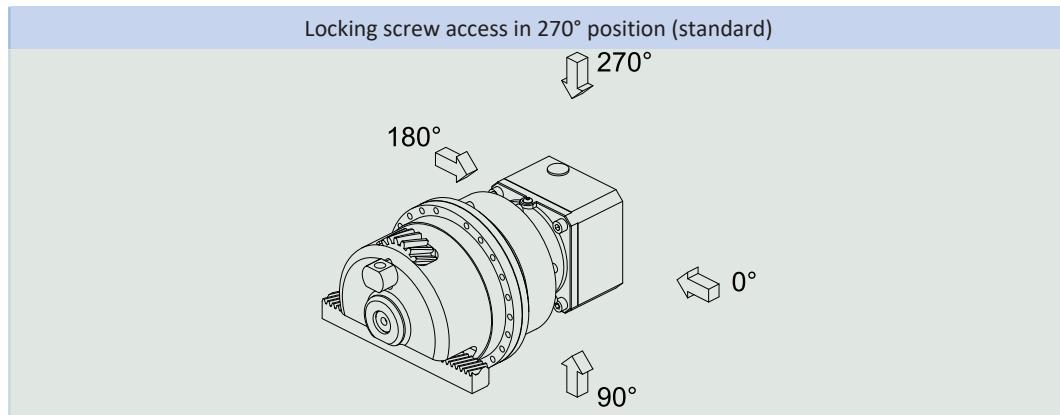

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

4.5.5.1 Rack and pinion drive lubrication

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

4.5.6 Position of locking screw access

The access hole for the motor coupling locking screw in the standard version is in the 270° position. Indicate variations for your rack and pinion drive in the order.

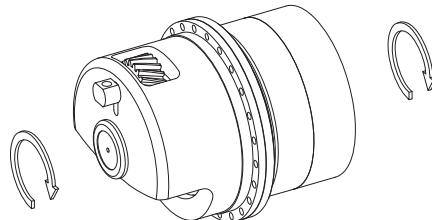

Note that the access hole for the motor coupling locking screw also rotates when the gear rack is rotated to another position.

4.5.7 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

4.5.8 Direction of rotation

The input and output rotate in the same direction.

4.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

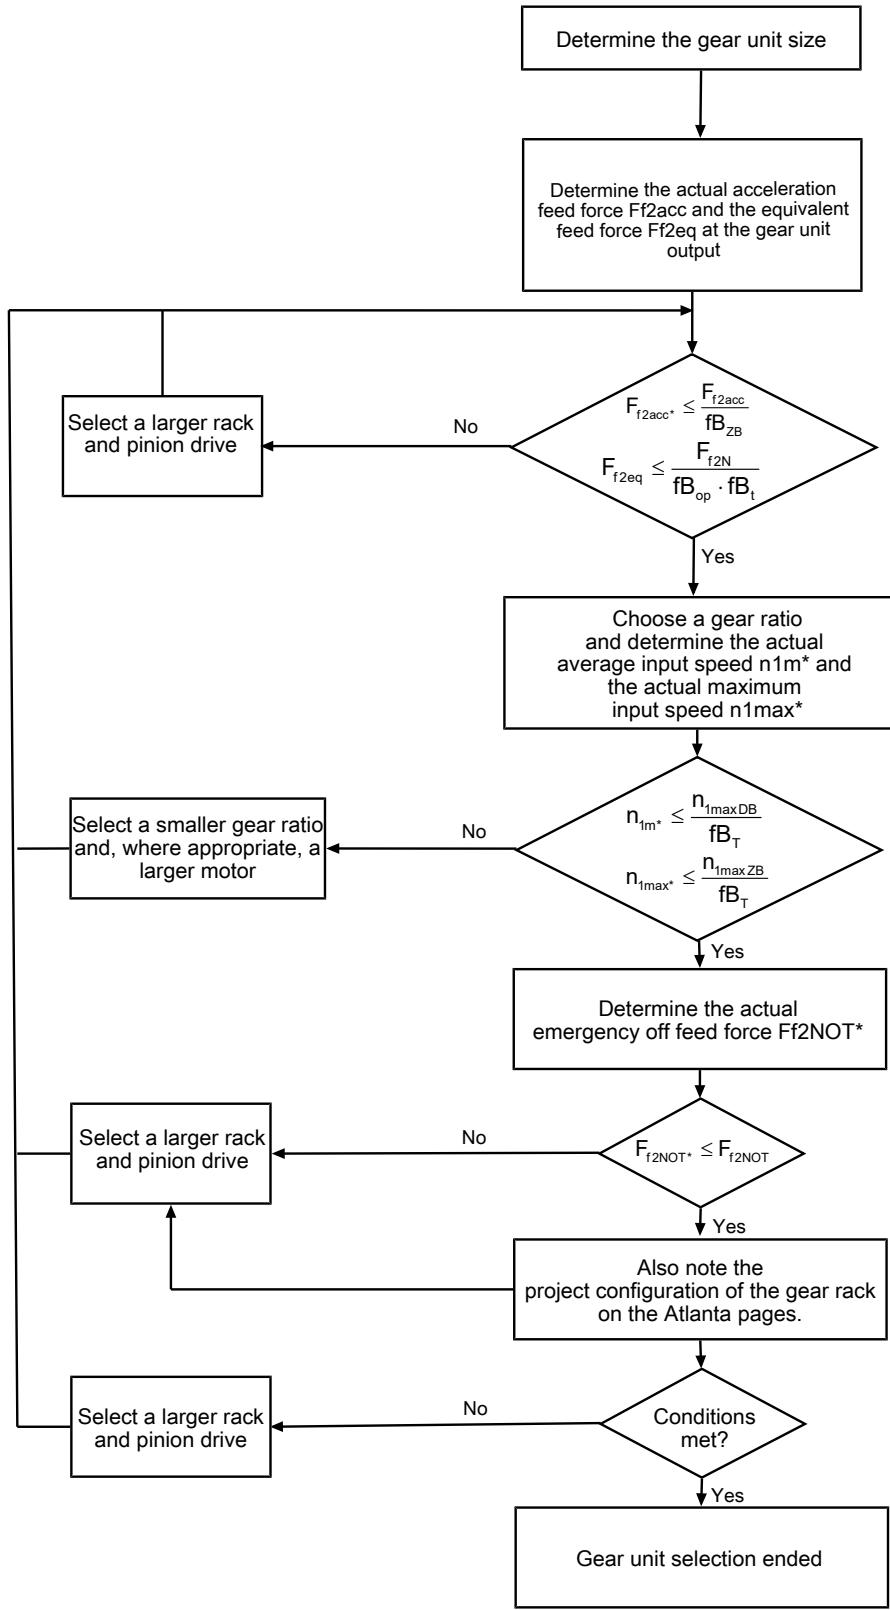

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

4.6.1 Drive selection

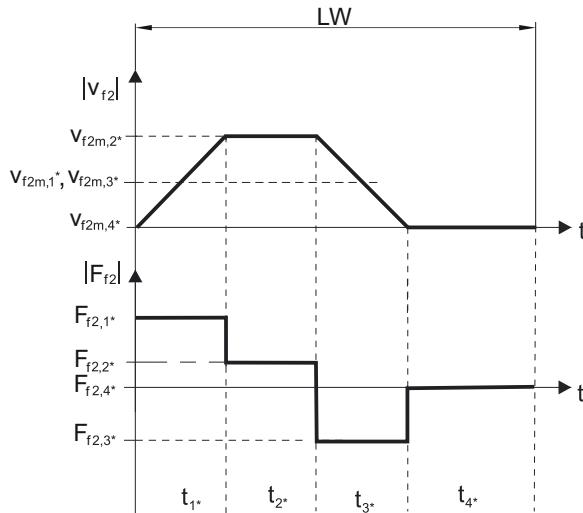

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_ZB can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

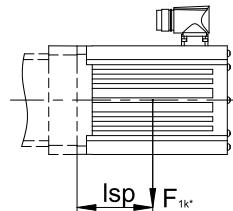

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

4.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PHV943_ME	200
PHV1043_ME	400

The values also apply to the MEL motor adapter.

4.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

4.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

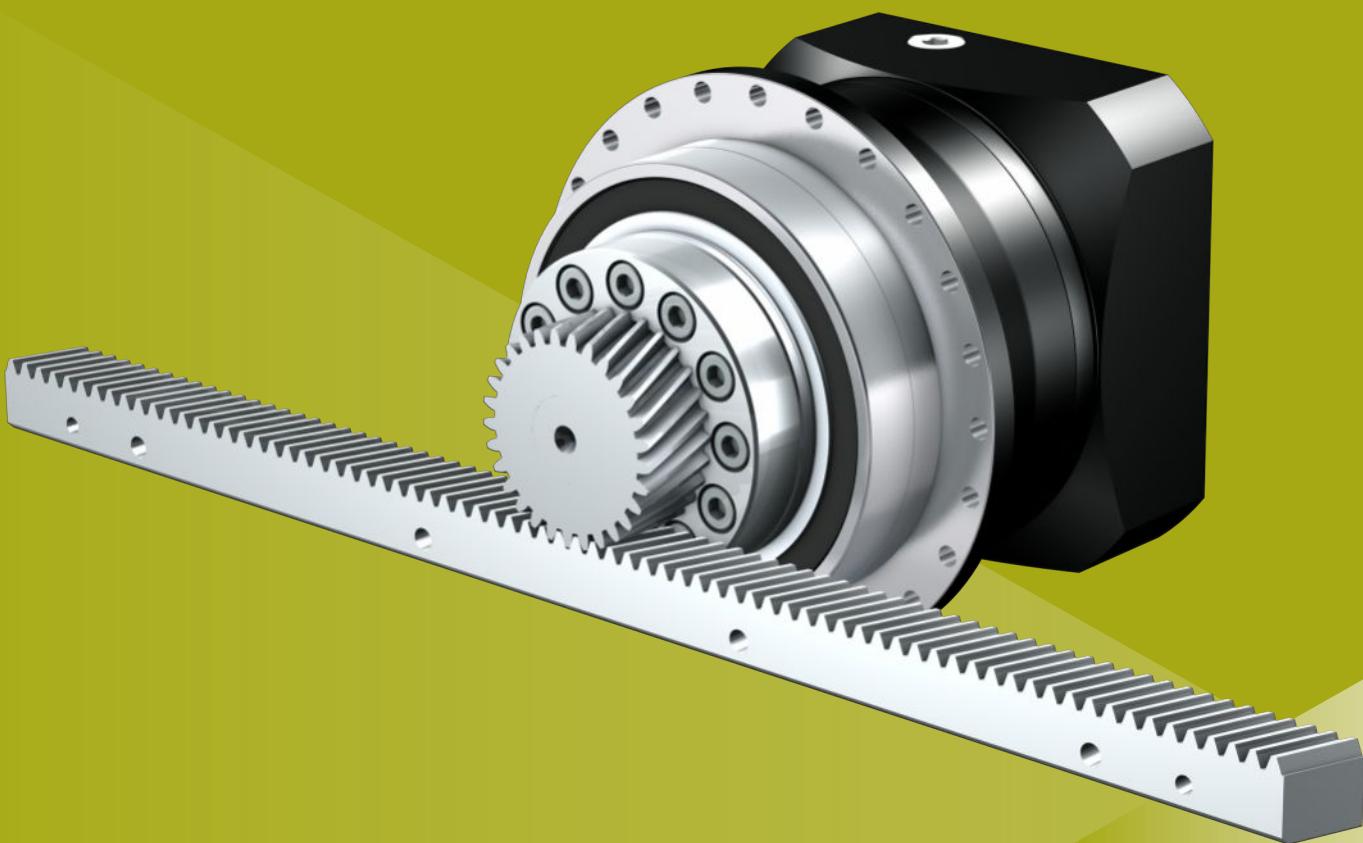

Enter the ID of the documentation in the Search term field.

Rack and pinion drives

ZTRPH

5.1 Overview

High-performance precision planetary gear units with screwed flange pinion

Features

Power density	★★★★★
Linear clearance	★★★★★
Price category	\$\$\$\$
Smooth operation	★★★★★
Linear rigidity	★★★★★
Mass moment of inertia	★★★★★
Ready-to-install drive solution	✓
Pinion gearing quality 5 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓
Radial runout ≤ 10 µm (optional)	✓
Reinforced output bearing (PH3 – PH5)	✓ (optional)

Key ★★★★★ good | ★★★★★ excellent

€ Economy | \$\$\$ Premium

Technical data

m_n	2 – 6 mm
z	12 – 32
F_{f2acc}	6.5 – 67 kN
$V_{f2maxZB}$	0.11 – 4.7 m/s
Δs	4 – 44 µm

5.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 5.5.4]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For rack and pinion drives with reduced backlash or reinforced bearings (PH3 – PH5), higher feed forces are possible. For this and all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

5.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

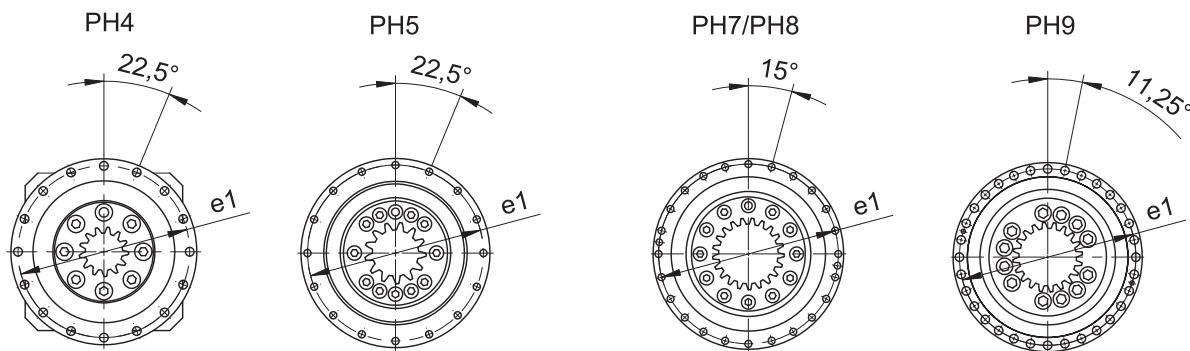

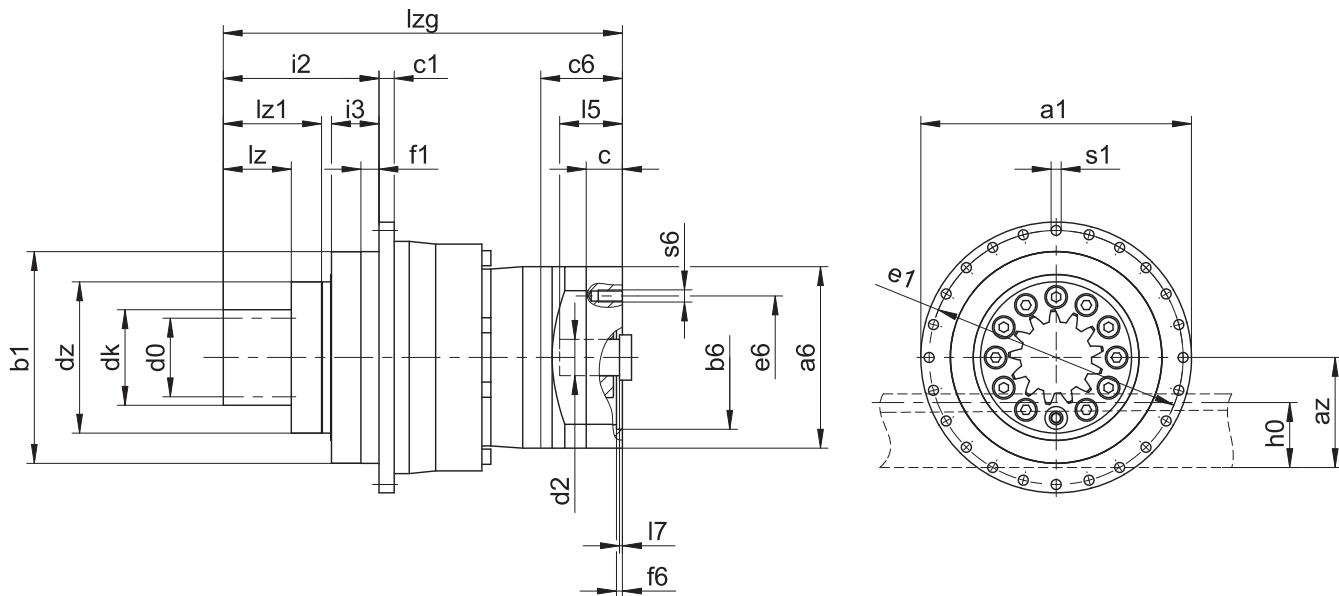

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x \cdot m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6, l5 and l_{zg} are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME, MEL and MF in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

5.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

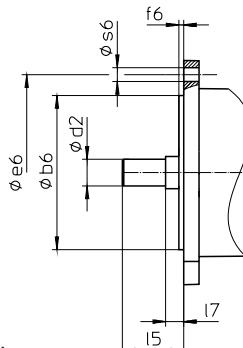

Example code

Z	TR	3	19	S	PH	7	3	1	S	F	S	S	0050	ME
---	----	---	----	---	----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
TR	Design	Screwed flange pinion
3	Module	$m_n = 3$ (example)
19	Number of teeth	$z = 19$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
PH	Type	Planetary gear unit
7	Size	7 (example)
3	Generation	Generation 3
4		Generation 4
1	Stages	Single-stage
2		Two-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
V		Reinforced bearing (PH3 – PH5)
S	Backlash	Standard
R		Reduced
0050	Transmission ratio ($i \times 10$)	$i = 5$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MF		Motor adapter with FlexiAdapt coupling
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

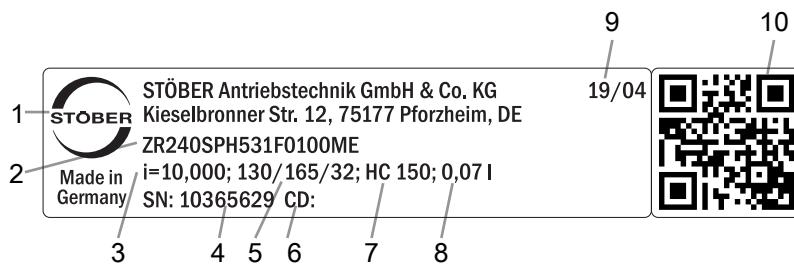

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 5.6.3]
- Radial runout $\leq 10 \mu\text{m}$ (optional)
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- PH531, PH7 – PH9: Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL/MF motor adapter (option)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 5.5.1].

5.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

5.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

5.5 Product description

5.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

KX right-angle input with MF motor adapter

K right-angle input with ME motor adapter

MB motor adapter

Catalog ID 443137_en

Catalog ID 443286_en

On request

On request

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

5.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

5.5.3 Motor adapter with FlexiAdapt coupling (MF)

In this chapter, you will find a description of the FlexiAdapt coupling.

Properties:

- Fast and easy motor attachment
- Rugged, laser-welded bellow coupling with expanding function
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Motor shaft decoupled from axial forces
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 2: FlexiAdapt coupling

5.5.4 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand $19^{\circ} 31' 42''$). The pinion gearing quality is 5.

The corresponding gear rack must have a right-hand design ($19^{\circ} 31' 42''$) and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

5.5.5 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot ϕ_{BZ} . The machine-side fit must be H7.

5.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

5.5.6.1 Rack and pinion drive lubrication

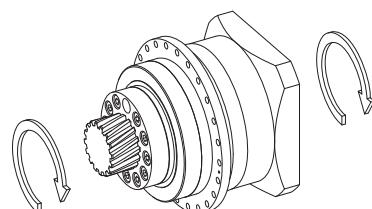

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

5.5.7 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	$\leq 90^{\circ}\text{C}$
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

5.5.8 Direction of rotation

The input and output rotate in the same direction.

² Observe the protection class of all the components.

5.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

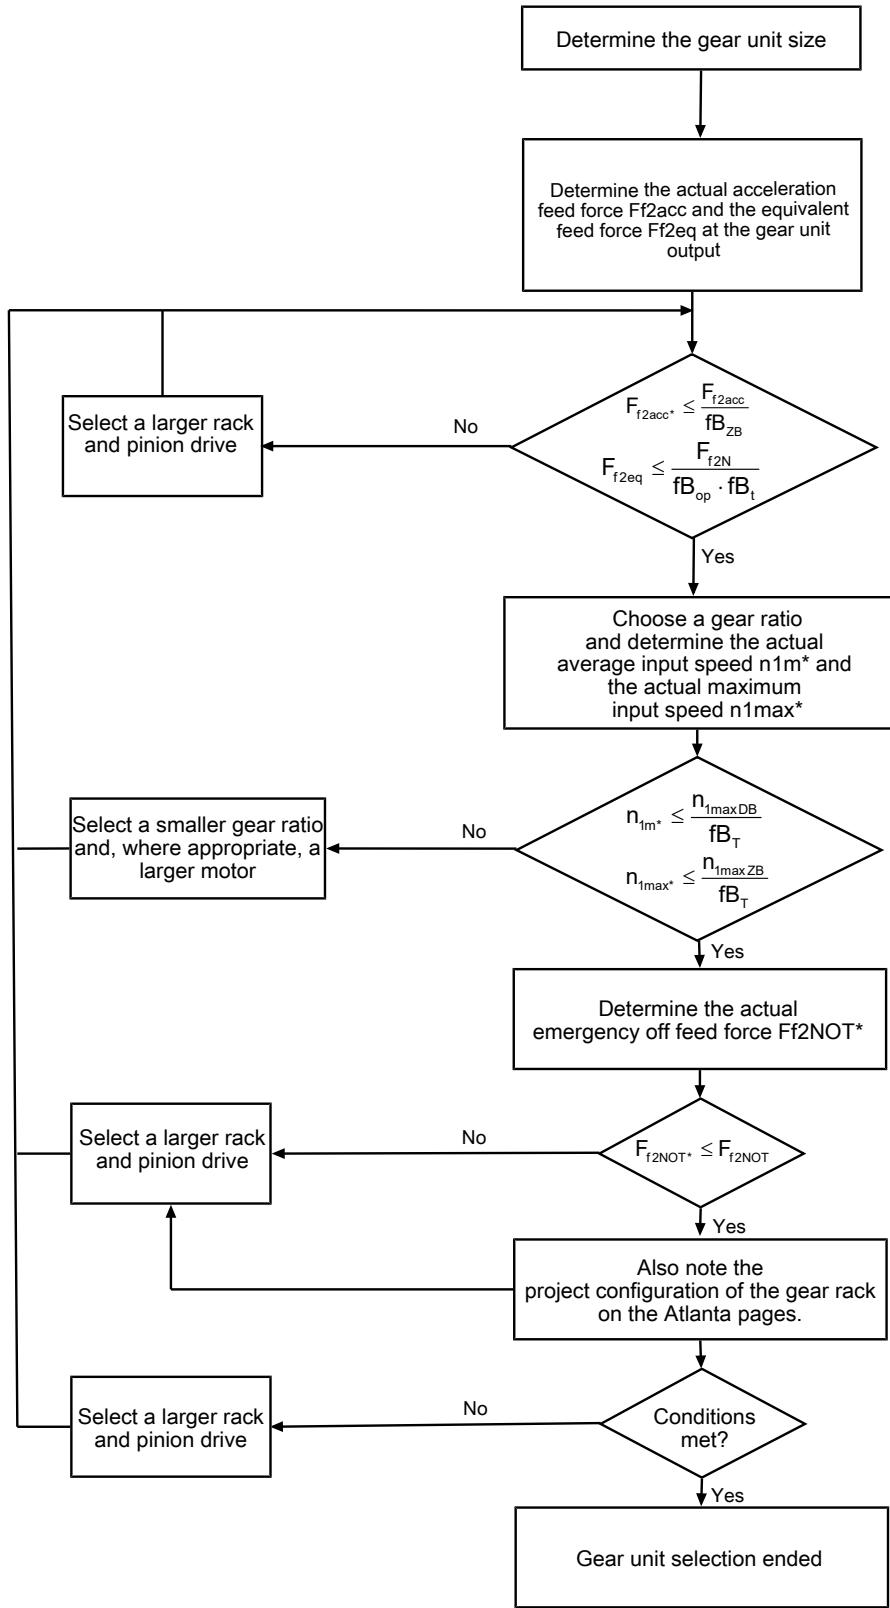

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

5.6.1 Drive selection

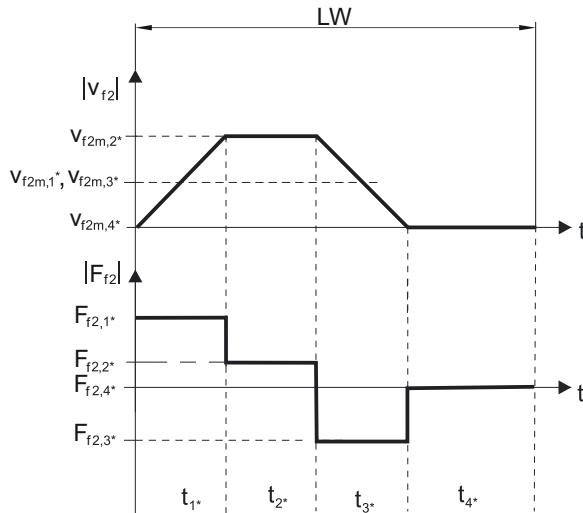

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_ZB can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

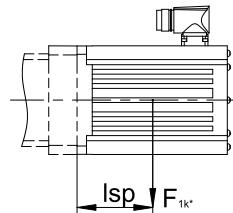

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

5.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PH331_ME	20
PH332_ME	10
PH431_ME	40
PH432_ME	20
PH531_ME	80
PH532_ME	40
PH731_ME	200
PH732_ME	80
PH831_ME	400
PH832_ME	200
PH942_ME	400
PH1042_ME	400

The values also apply to the MEL and MF motor adapters.

5.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

5.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

Enter the ID of the documentation in the Search term field.

6 Rack and pinion drives

ZTRPHV

6.1 Overview

High-performance precision planetary gear units with screwed flange pinion

Features

Power density	★★★★★
Linear clearance	★★★★★
Price category	\$\$\$\$
Smooth operation	★★★★★
Linear rigidity	★★★★★
Mass moment of inertia	★★★★★
Ready-to-install drive solution	✓
Pinion gearing quality 5 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓
Radial runout ≤ 10 µm (optional)	✓

Key ★★★★☆ good | ★★★★★ excellent

€ Economy | \$\$\$ Premium

Technical data

m_n	5 – 6 mm
z	16 – 19
F_{f2acc}	56 – 67 kN
$V_{f2maxZB}$	0.2 – 0.39 m/s
Δs	15 – 44 µm

6.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 6.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

6.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

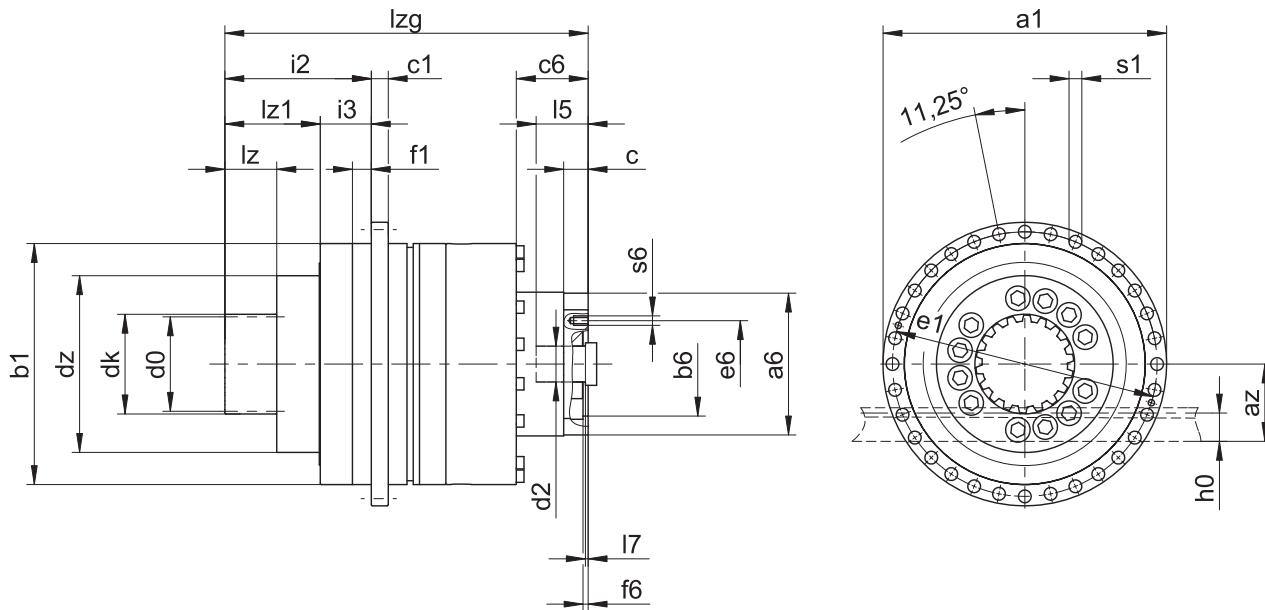

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

Output dimensions

Type	m_n	$\varnothing a_1$	a_z	$\varnothing b_1$	c_1	d_0	d_k	d_z	$\varnothing e_1$	f_1	h_0	i_2	i_3	l_z	l_{z1}	$\varnothing s_1$	x
ZTR519SPHV9_	5	300	84.40	255_{h7}	18	100.80	110.8	187	280	20	34	155	54	55	101	13.5	0.0
ZTR616SPHV9_	6	300	93.93	255_{h7}	18	101.86	113.9	187	280	20	43	165	54	65	111	13.5	0.0

Example dimensions for the motor connection + total length

Type	$\varnothing b_6$	$\varnothing e_6$	$\varnothing d_{2max}$	l_5	$\square a_6$	c	c_6	f_6	l_7	l_{zg}	s_6
ZTR5_PHV9_ME	130.0^{H7}	165	38	61	150	26	66	5.5	4.5	383	M10
ZTR6_PHV9_ME	130.0^{H7}	165	38	61	150	26	66	5.5	4.5	393	M10

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c_6 , l_5 and l_{zg} are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

6.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

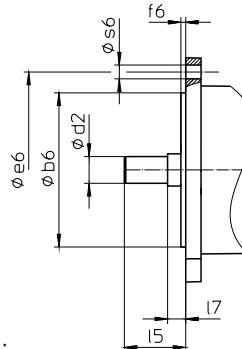

Example code

Z	TR	6	16	S	PHV	9	4	3	S	F	S	S	0910	ME
---	----	---	----	---	-----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
TR	Design	Screwed flange pinion
6	Module	$m_n = 6$ (example)
16	Number of teeth	$z = 16$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
PHV	Type	Planetary gear unit
9	Size	9 (example)
4	Generation	Generation 4
3	Stages	Three-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
S	Backlash	Standard
R		Reduced (PHV9)
0910	Transmission ratio (i x 10)	i = 91 (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 6.6.3]
- Radial runout $\leq 10 \mu\text{m}$ (optional)
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL motor adapter (optional)

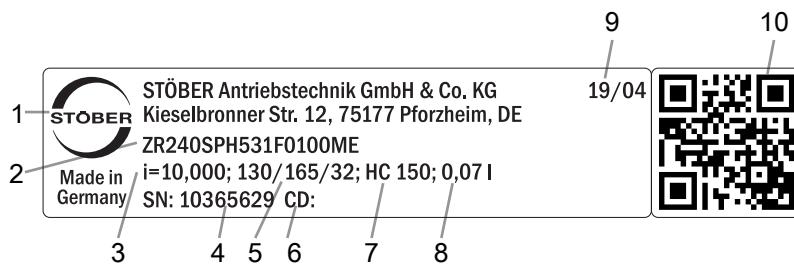

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter.

All input options available upon request are listed in the chapter [▶ 6.5.1].

¹You can find more details in the catalog for ServoStop servo gear unit with brake ID 443234.

6.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

6.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

6.5 Product description

6.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

Catalog ID 443137_en

Catalog ID 443286_en

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

You can also acquire rack and pinion drives with low-backlash PHVA gear units upon request. To do so, send us an e-mail at sales@stober.de.

6.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

6.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gear ing quality is 5.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

6.5.4 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot øbz. The machine-side fit must be H7.

6.5.5 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

6.5.5.1 Rack and pinion drive lubrication

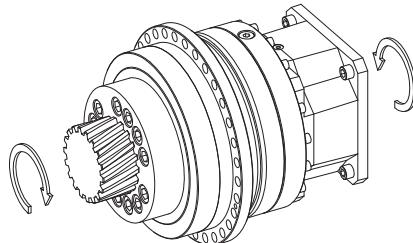

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

6.5.6 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

6.5.7 Direction of rotation

The input and output rotate in the same direction.

6.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

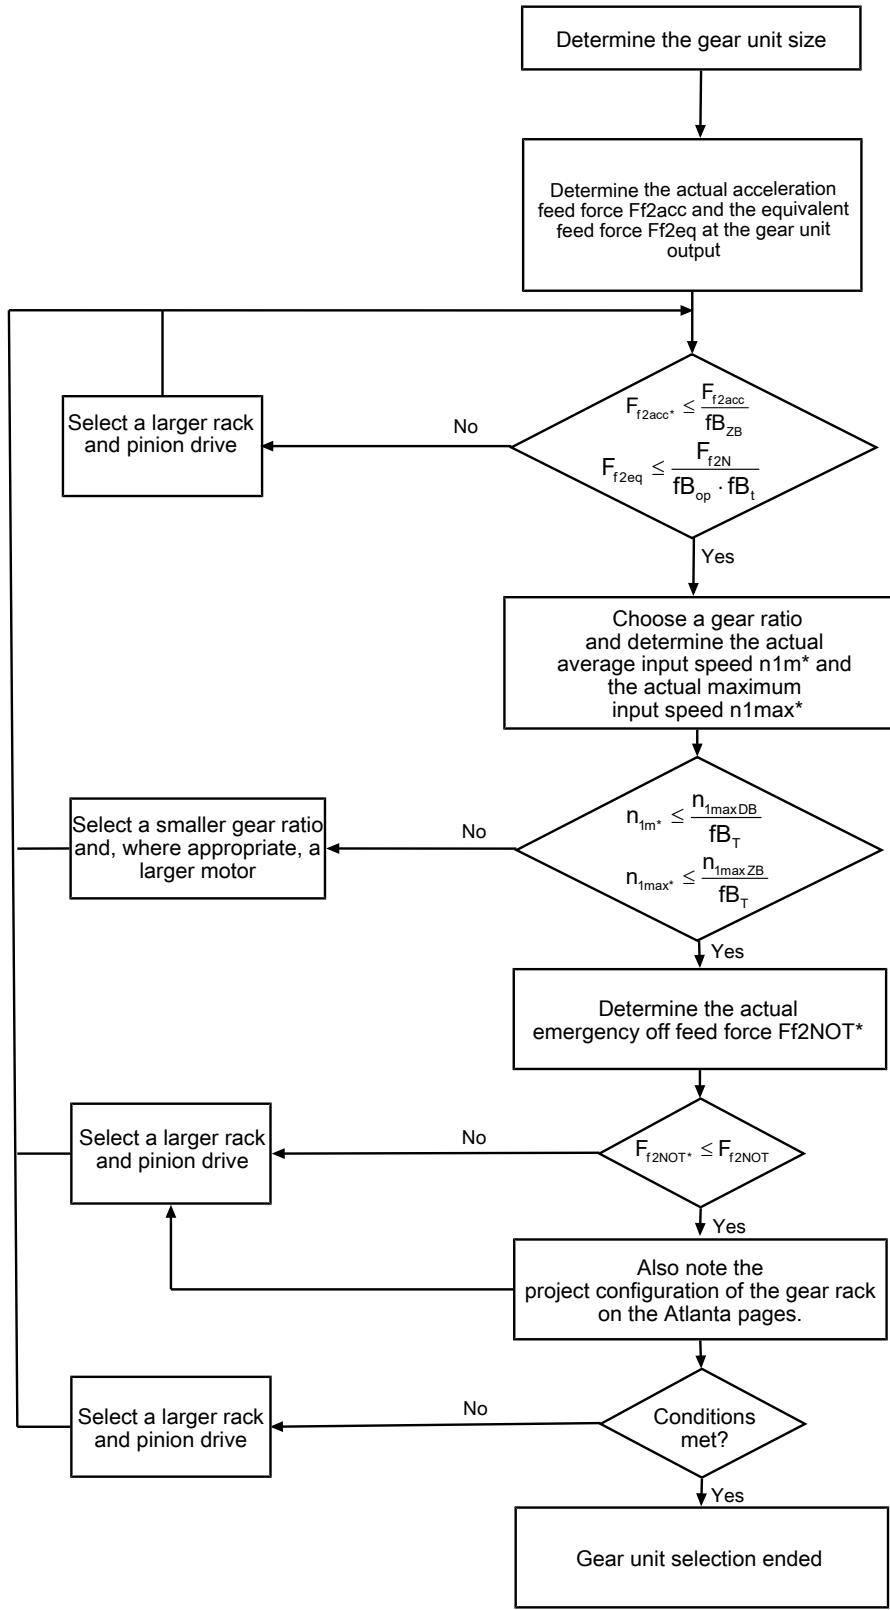

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

6.6.1 Drive selection

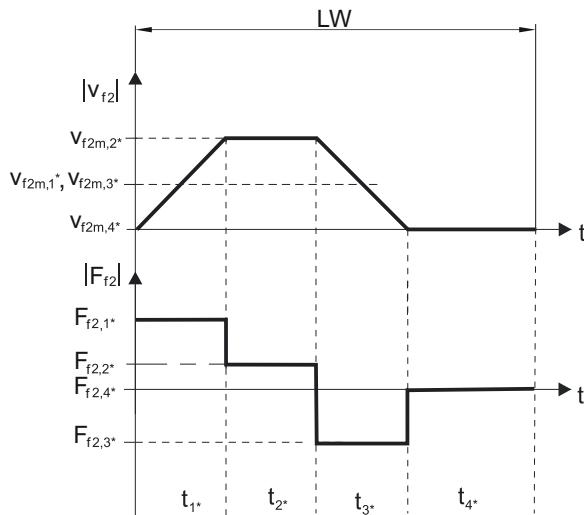

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_ZB can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

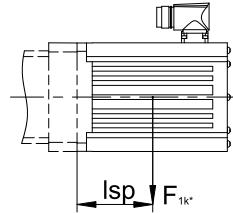

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

6.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PHV943_ME	200
PHV1043_ME	400

The values also apply to the MEL motor adapter.

6.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

6.7 Additional documentation

Additional documentation related to the product can be found at
<http://www.stoeber.de/en/downloads/>

Enter the ID of the documentation in the Search term field.

Rack and pinion drives

ZRPH

7.1 Overview

High-performance precision planetary gear units with screwed pinion

Features

Power density	★★★☆☆
Linear clearance	★★★★★
Price category	€€€
Smooth operation	★★★★☆
Linear rigidity	★★★☆☆
Mass moment of inertia	★★★★☆
Ready-to-install drive solution	✓
Pinion gearing quality 5 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓
Reinforced output bearing (PH3 – PH5)	✓ (optional)

Key ★☆☆☆☆ good | ★★★★★ excellent

€ Economy | €€€€€ Premium

Technical data

m_n	2 – 4 mm
z	30 – 40
F_{f2acc}	3.1 – 16 kN
$V_{f2maxZB}$	0.29 – 6.7 m/s
Δs	10 – 56 µm

7.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 7.5.4]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration for thermal limiting performance

For rack and pinion drives with reduced backlash or reinforced bearings (PH3 – PH5), higher feed forces are possible. For this and all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

7.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

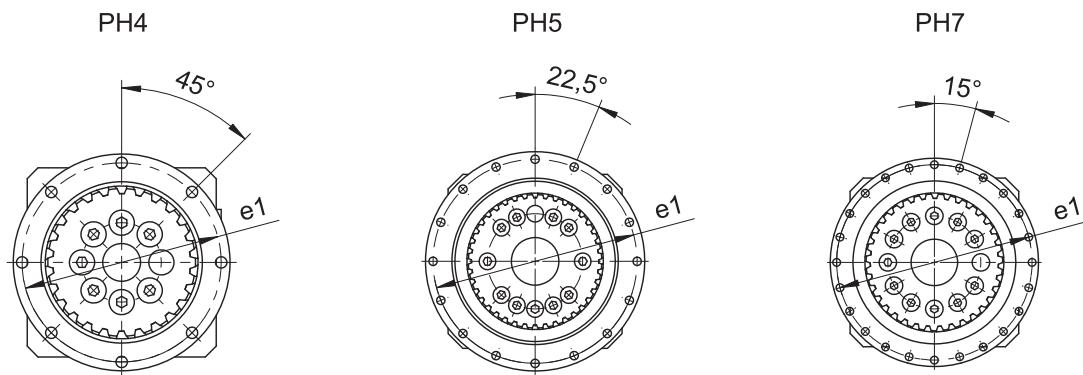

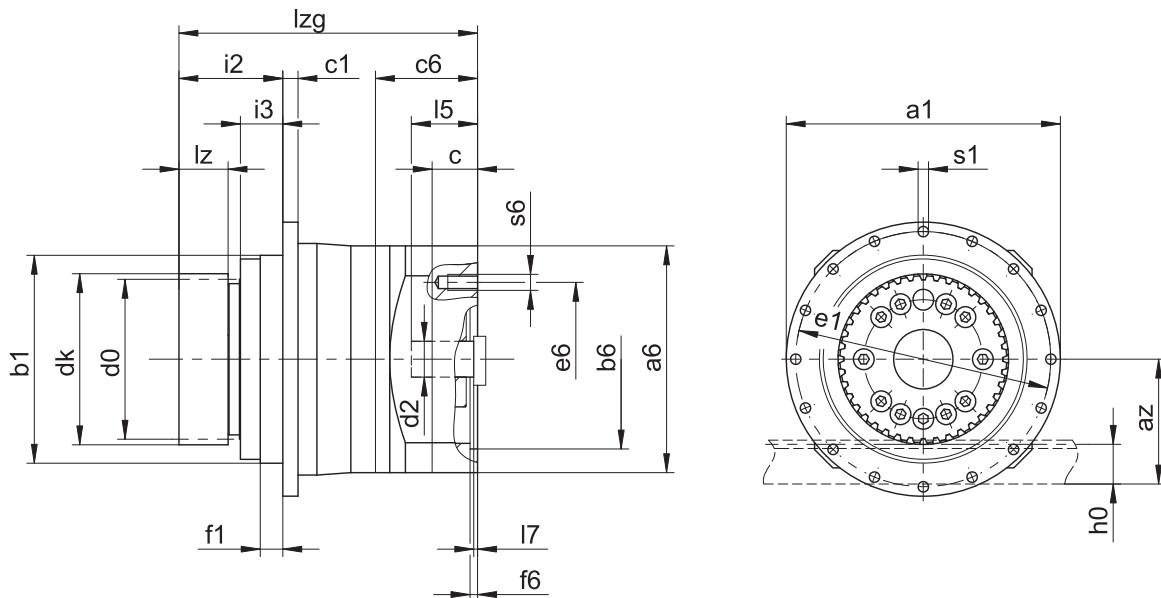

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6, l5 and lzg are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME, MEL and MF in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

7.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

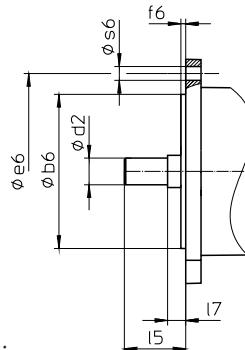

Example code

Z	R	3	30	S	PH	5	3	2	S	F	S	S	0280	ME
---	---	---	----	---	----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
R	Design	Screwed pinion
3	Module	$m_n = 3$ (example)
30	Number of teeth	$z = 30$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
PH	Type	Planetary gear unit
5	Size	5 (example)
3	Generation	Generation 3
1	Stages	Single-stage
2		Two-stage
S	Housing	Standard
F	Shaft	Flange shaft
S	Bearing	Standard bearing
V		Reinforced bearing (PH3 – PH5)
S	Backlash	Standard
R		Reduced
0280	Transmission ratio ($i \times 10$)	$i = 28$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MF		Motor adapter with FlexiAdapt coupling
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

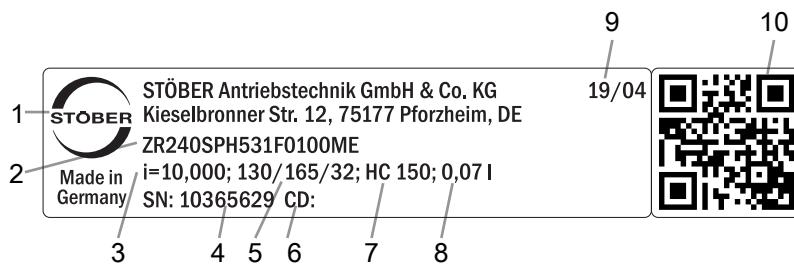

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 7.6.3]
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- PH531, PH7: Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL/MF motor adapter (option)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 7.5.1].

7.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

7.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

7.5 Product description

7.5.1 Input options

In this chapter, you will find all available input options:

Motor adapter

EZ synchronous servo motor

KX right-angle input with MF motor adapter

K right-angle input with ME motor adapter

MB motor adapter

Catalog ID 443137_en

Catalog ID 443286_en

On request

On request

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

You can also acquire rack and pinion drives with low-backlash PHA gear units upon request. To do so, send us an e-mail at sales@stober.de.

7.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

7.5.3 Motor adapter with FlexiAdapt coupling (MF)

In this chapter, you will find a description of the FlexiAdapt coupling.

Properties:

- Fast and easy motor attachment
- Rugged, laser-welded bellow coupling with expanding function
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Motor shaft decoupled from axial forces
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 2: FlexiAdapt coupling

7.5.4 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

The corresponding gear rack must have a right-hand design ($19^\circ 31' 42''$) and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	6	16MnCr5 inductively hardened
5	5	16MnCr5 inductively hardened
6 – 10	6	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

7.5.5 Installation conditions

The torque and force values listed in this catalog are valid under the following conditions:

- When the gear housing is fastened on the machine side using screws of strength class 12.9
- When the gear housings are adjusted at pilot ϕ_{BZ} . The machine-side fit must be H7.

7.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

7.5.6.1 Rack and pinion drive lubrication

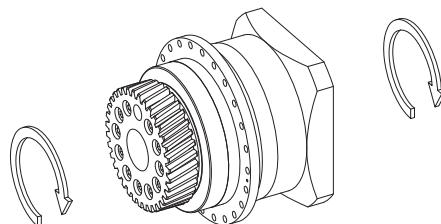

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

7.5.7 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	$\leq 90^\circ\text{C}$
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

7.5.8 Direction of rotation

The input and output rotate in the same direction.

²Observe the protection class of all the components.

7.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

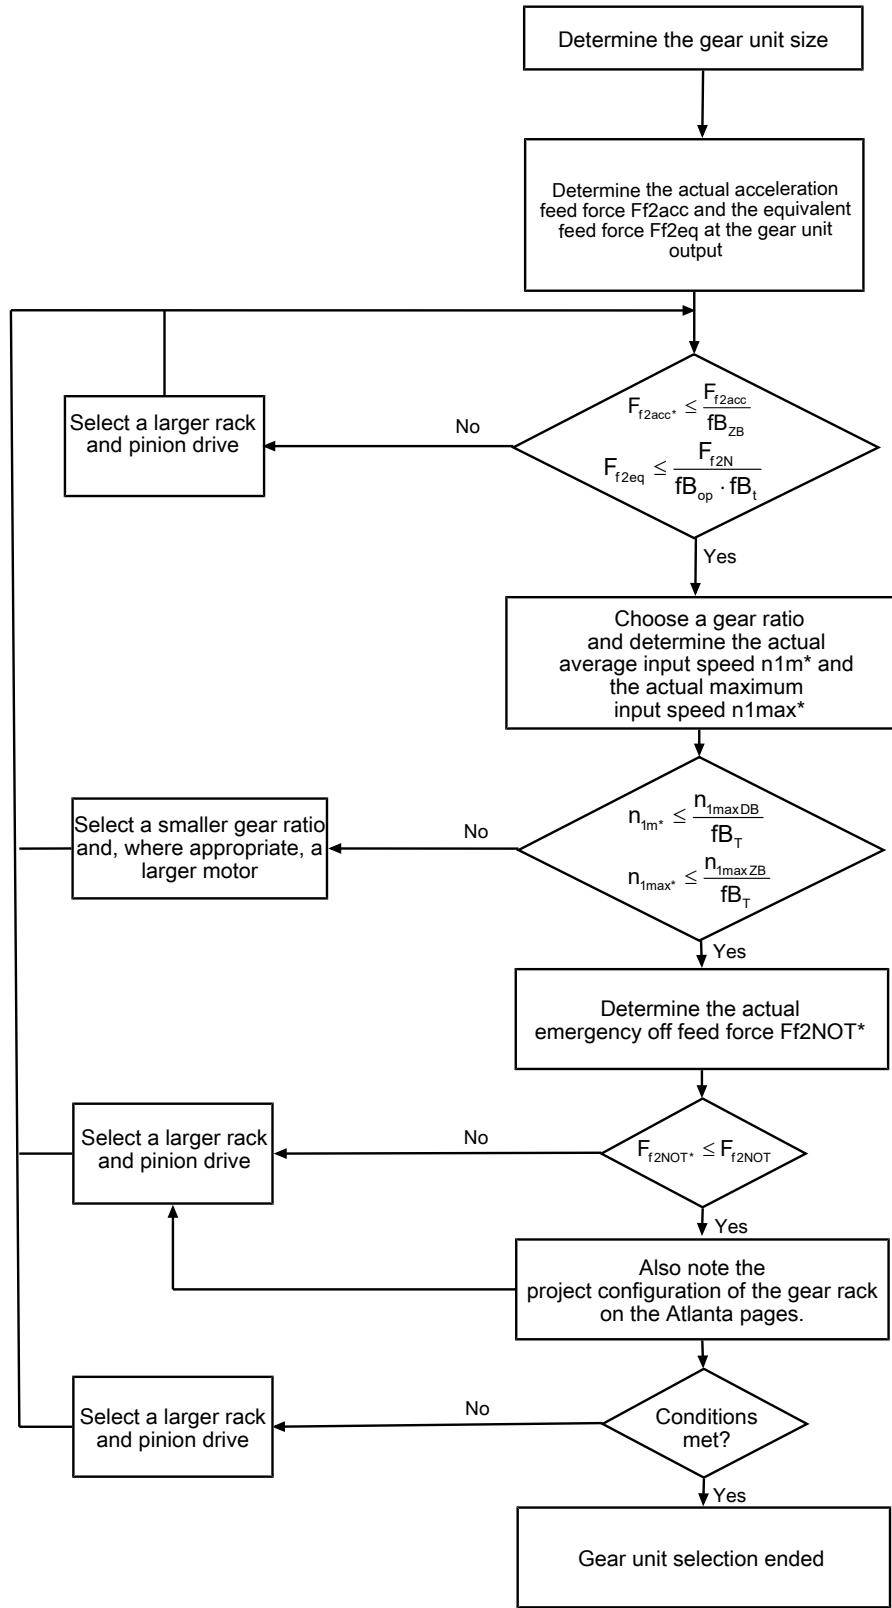

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

7.6.1 Drive selection

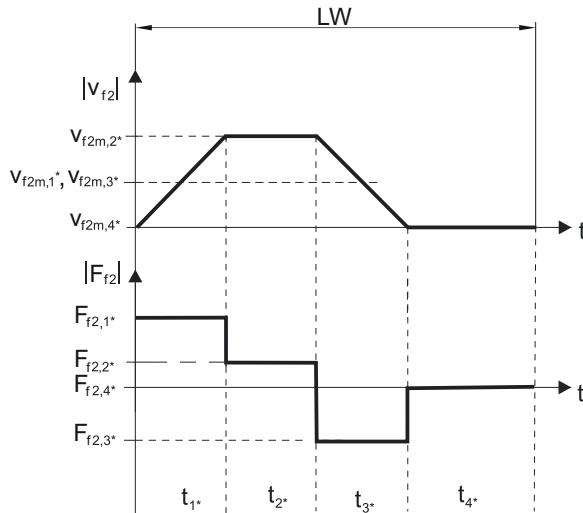

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} .

The values for fB_T , fB_{op} , fB_t and fB_ZB can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	≤ 20 °C	0.9
	≤ 30 °C	1.0
	≤ 40 °C	1.15
Motor with convection cooling	≤ 20 °C	1.0
	≤ 30 °C	1.1
	≤ 40 °C	1.25

Notes

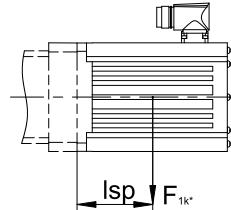

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc} , F_{f2NOT}) in the selection tables.

7.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PH331_ME	20
PH332_ME	10
PH431_ME	40
PH432_ME	20
PH531_ME	80
PH532_ME	40
PH731_ME	200
PH732_ME	80
PH831_ME	400
PH832_ME	200
PH942_ME	400
PH1042_ME	400

The values also apply to the MEL and MF motor adapters.

7.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

7.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

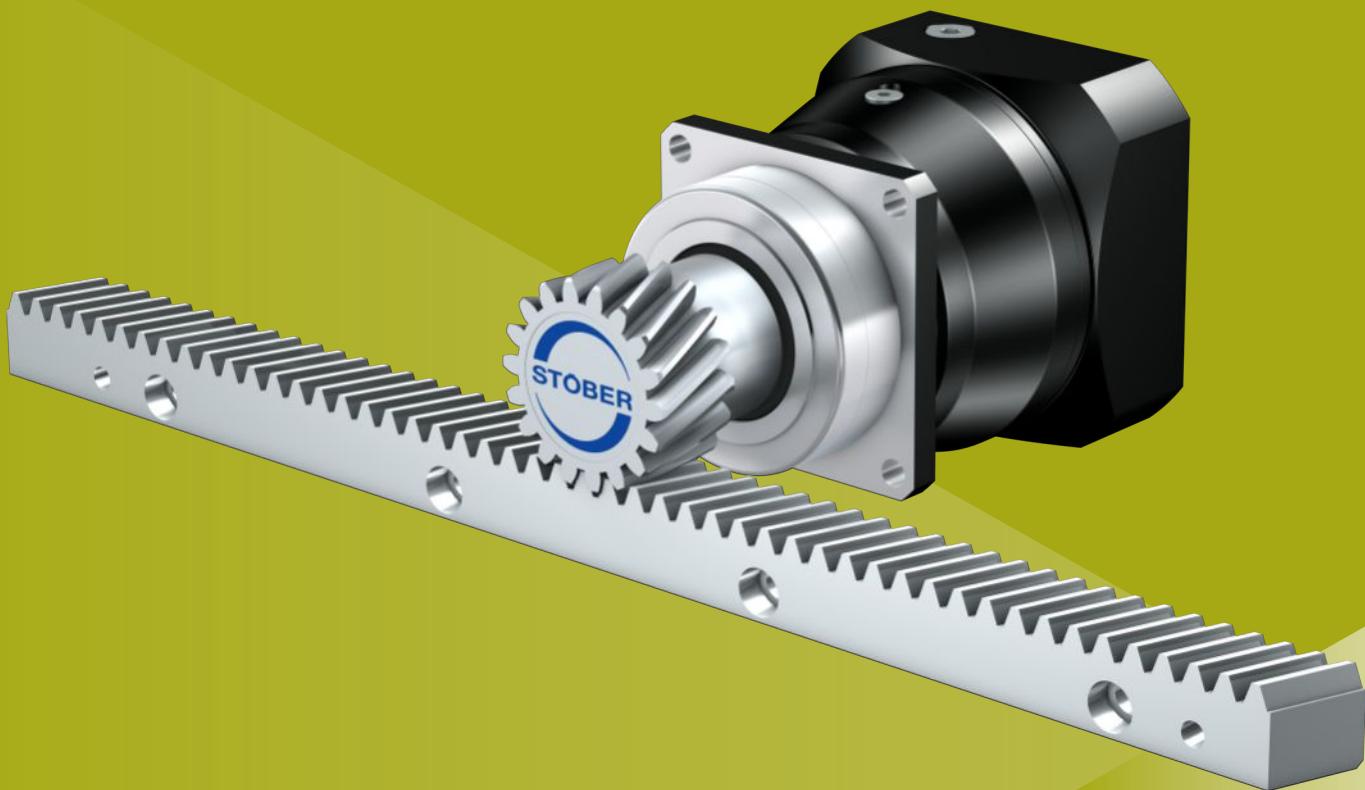

Enter the ID of the documentation in the Search term field.

8 Rack and pinion drives

ZVP

8.1 Overview

Precision planetary gear units with plug-on pinion

Features

Power density	★★★☆☆
Linear clearance	★★★★★
Price category	€€
Smooth operation	★★★★☆
Linear rigidity	★★★☆☆
Mass moment of inertia	★★★★☆
Ready-to-install drive solution	✓
Pinion gearing quality 6 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓

Key ★☆☆☆☆ good | ★★★★★ excellent

€ Economy | €\$\$\$\$ Premium

Technical data

m_n	2 – 4 mm
z	16 – 25
F_{f2acc}	1.7 – 15 kN
$V_{f2maxZB}$	0.14 – 5.3 m/s
Δs	8 – 44 µm

8.2 Selection tables

The technical data specified in the selection tables applies to:

- Pinion position E with bearing design S (standard)
- Pinion position S with bearing design D (axially reinforced, option)
- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 8.5.4]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration of the thermal limiting performance
- C_{lin}: Pinion position S with bearing design D (axially reinforced, option)

Higher feed forces are possible for rack and pinion drives with reduced backlash, reinforced bearing D (axially reinforced) or pinion position S. You can find this and all other technical data, as well as other combinations of the pinion position and bearing design, at <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

8.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

Dimension az in the tables of dimensions applies to Atlanta gear racks. In general: $az = \frac{1}{2} d_0 + h_0 + x * m_n$

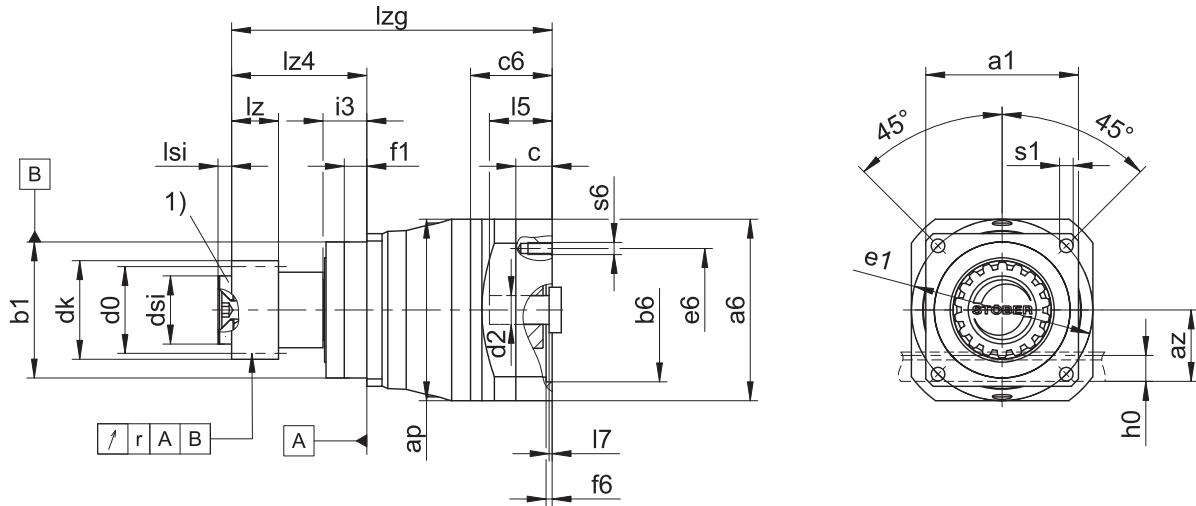

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

8.3.1 Pinion position E

1) Axial locking (optional)

The radial runout specification applies only to the reinforced bearing D.

Output dimensions

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions $c6$, $l5$ and lZg are also lengthened accordingly.You will find additional motor connection dimensions for motor adapters ME, MEL and MF in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

8.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

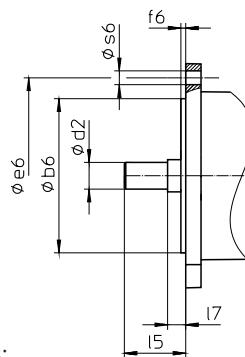

Example code

Z	V	3	22	S	S	P	7	3	1	S	P	S	S	0050	ME
---	---	---	----	---	---	---	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
V	Design	Plug-on pinion
3	Module	$m_n = 3$ (example)
22	Number of teeth	$z = 22$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
E	Pinion position	Shaft end
S		Shaft shoulder
P	Type	Planetary gear unit
7	Size	7 (example)
3	Generation	Generation 3
1	Stages	Single-stage
2		Two-stage
S	Housing	Standard
P	Shaft	Solid shaft with feather key
S	Bearing	Standard bearing
D		Axially reinforced bearing
S	Backlash	Standard
R		Reduced
0050	Transmission ratio ($i \times 10$)	$i = 5$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors
MF		Motor adapter with FlexiAdapt coupling
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

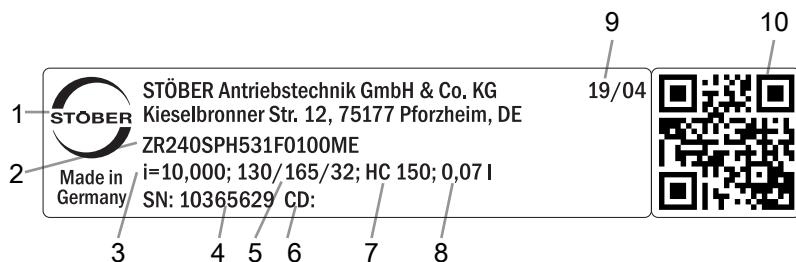

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

- Radial shaft seal rings at the output made of NBR or FKM (option), see the chapter [▶ 8.6.3]
- For axial locking (optional), see the chapter [▶ 8.3]
- Reverse operation of the output shaft from $\pm 20^\circ$ to $\pm 90^\circ$ for horizontal installation on request
- P531, P7: Double seal for motor adapter (option)
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL/MF motor adapter (option)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 8.5.1].

8.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

8.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

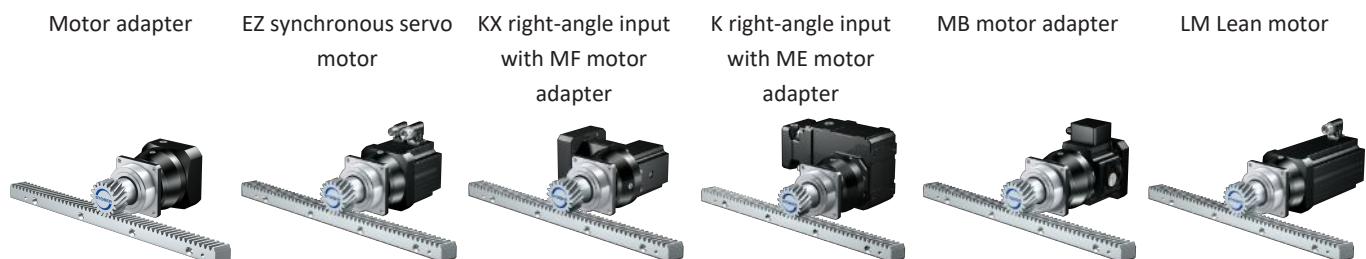

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

8.5 Product description

8.5.1 Input options

In this chapter, you will find all available input options:

Catalog ID 443137_en Catalog ID 443286_en On request On request On request On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

8.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

8.5.3 Motor adapter with FlexiAdapt coupling (MF)

In this chapter, you will find a description of the FlexiAdapt coupling.

Properties:

- Fast and easy motor attachment
- Rugged, laser-welded bellow coupling with expanding function
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Motor shaft decoupled from axial forces
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 2: FlexiAdapt coupling

8.5.4 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gearing quality is 6.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	8	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

8.5.4.1 Pinion position

The pinion can be fastened to the shaft in two different attachment positions:

- The tooth is flush with the shaft end (Pos. E)
- The tooth is flush with the shaft shoulder (Pos. S: For higher permitted feed forces, see the Selection tables chapter)

Please specify the desired attachment position when placing your order.

8.5.5 Installation conditions

The specified torques and forces only apply when gear units are fastened on the machine side using screws of strength class 12.9. In addition, the gear housings must be adjusted at the pilot. The machine-side fit must be H7.

8.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

8.5.6.1 Rack and pinion drive lubrication

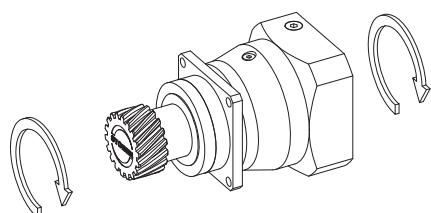

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

8.5.7 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

8.5.8 Direction of rotation

The input and output rotate in the same direction.

² Observe the protection class of all the components.

8.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

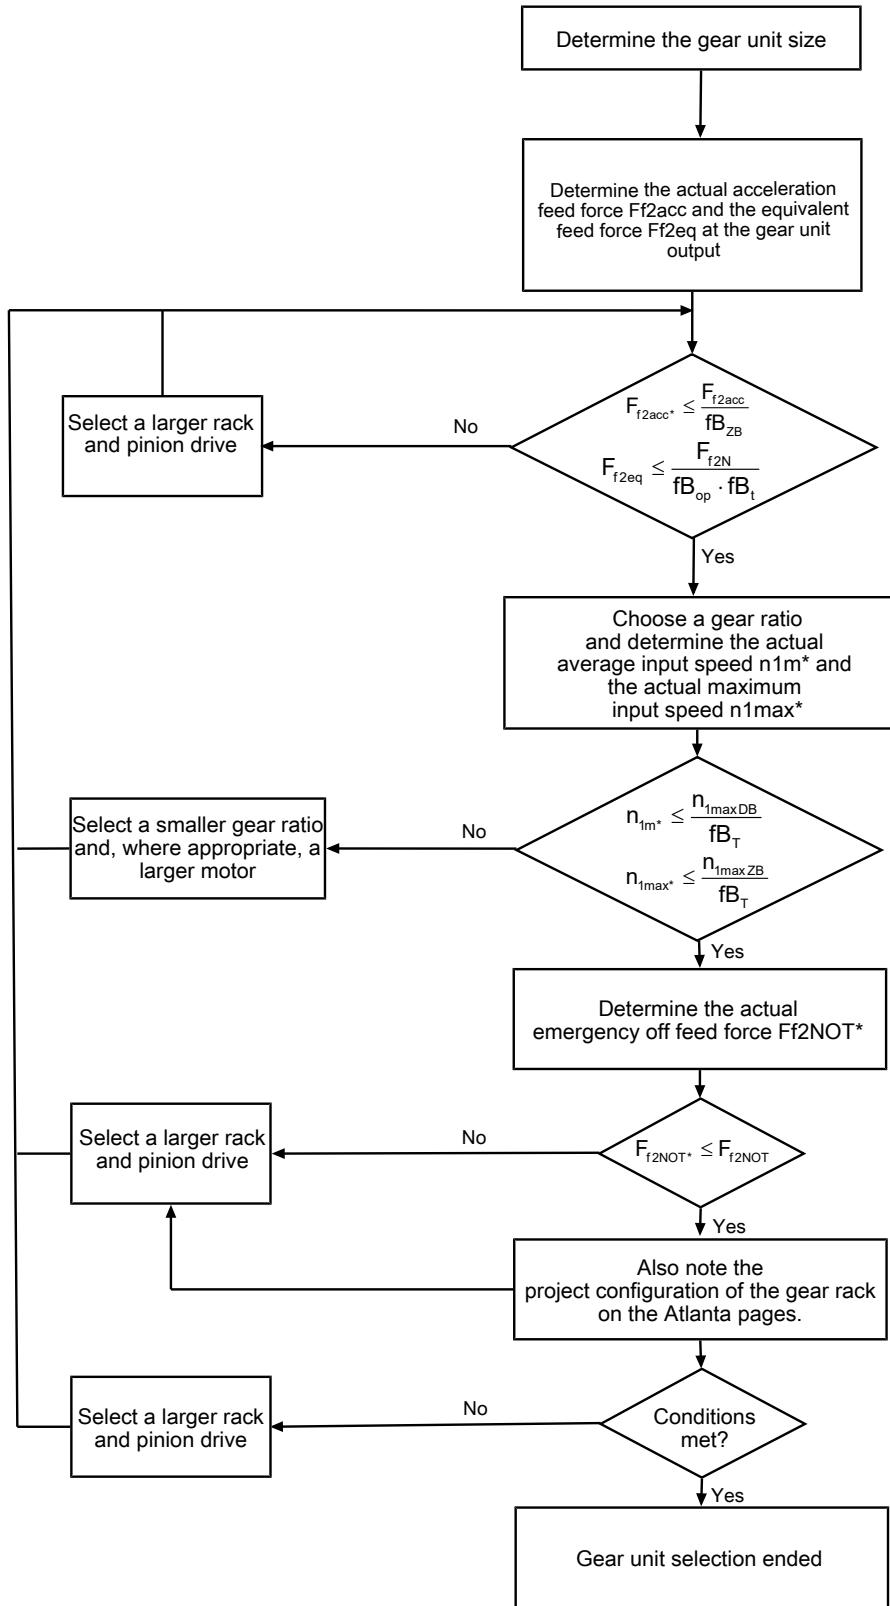

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

8.6.1 Drive selection

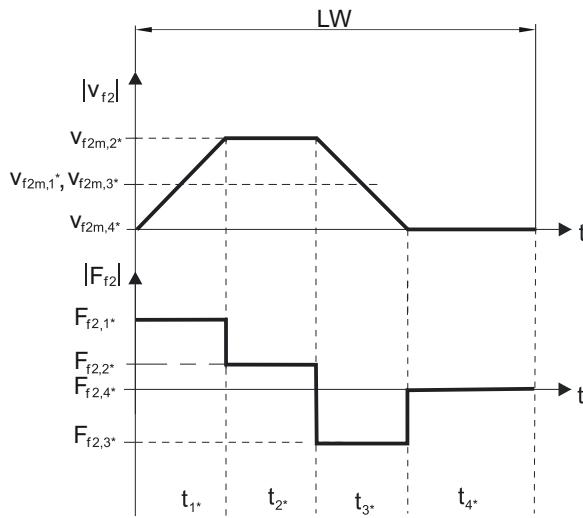

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} . The forces depend on the pinion position (E or S). The speeds are partially dependent on the mounting position.

The values for fB_t , fB_{op} , fB_t and fB_{zB} can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	≤ 20 °C	0.9
	≤ 30 °C	1.0
	≤ 40 °C	1.15
Motor with convection cooling	≤ 20 °C	1.0
	≤ 30 °C	1.1
	≤ 40 °C	1.25

Notes

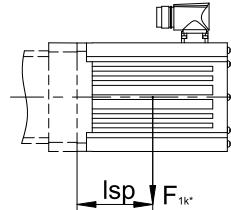

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc} , F_{f2NOT}) in the selection tables.

8.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
P231_ME	10
P232_ME	10
P331_ME	20
P332_ME	10
P431_ME	40
P432_ME	20
P531_ME	80
P532_ME	40
P731_ME	200
P732_ME	80
P831_ME	400
P832_ME	200
P931_ME	800
P932_ME	400

The values also apply to the MEL and MF motor adapters.

8.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

8.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

Enter the ID of the documentation in the Search term field.

Rack and pinion drives

ZVPE

9.1 Overview

Cost-efficient planetary gear units with plug-on pinion

Features

Power density	★★★★★
Linear clearance	★★★★★
Price category	€
Smooth operation	★★★★★
Linear rigidity	★★★★★
Mass moment of inertia	★★★★★
Ready-to-install drive solution	✓
Pinion gearing quality 6 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓

Key ★★★★★ good | ★★★★★ excellent

€ Economy | €\$\$\$\$ Premium

Technical data

m_n	2 – 3 mm
z	16 – 25
F_{f2acc}	1.7 – 6.1 kN
$V_{f2maxZB}$	0.14 – 4.5 m/s
Δs	40 – 83 µm

9.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 9.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration of the thermal limiting performance
- C_{lin} : Pinion position S

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

9.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

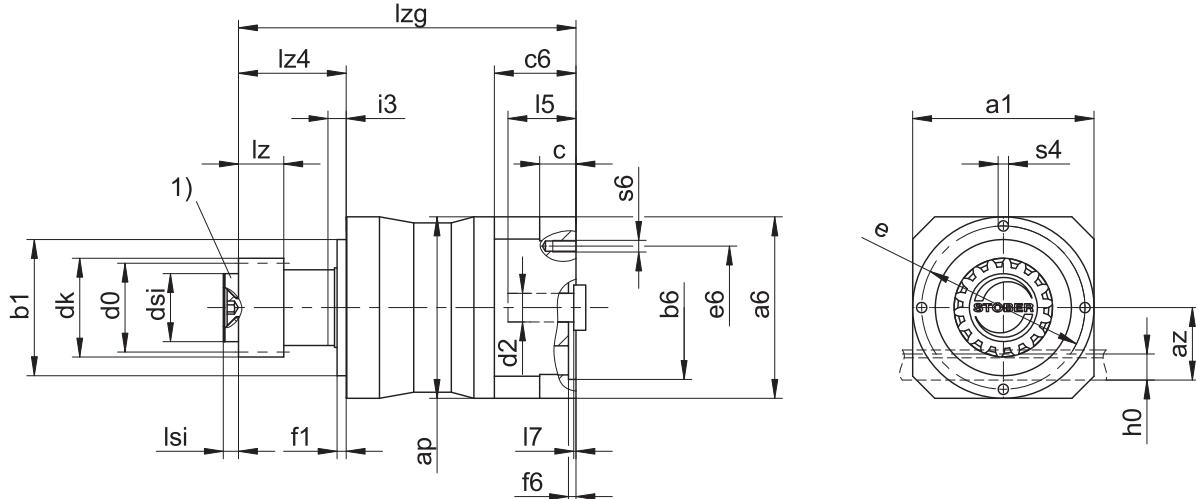

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6, l5 and l_zg are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

9.4 Type designation

This chapter shows you an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

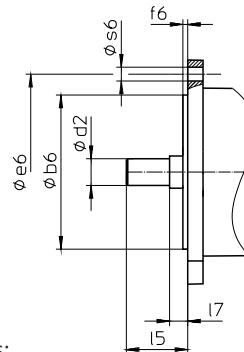

Example code

Z	V	2	20	S	S	PE	4	2	1	S	P	S	S	0050	ME
---	---	---	----	---	---	----	---	---	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
V	Design	Plug-on pinion
2	Module	$m_n = 2$ (example)
20	Number of teeth	$z = 20$ (example)
S	Tooth ing	Helical (left-hand $19^{\circ} 31' 42''$)
E	Pinion position	Shaft end
S		Shaft shoulder
PE	Type	Planetary gear unit
4	Size	4 (example)
2	Generation	Generation 2
1	Stages	Single-stage
2		Two-stage
S	Housing	Standard
P	Shaft	Solid shaft with feather key
S	Bearing	Standard bearing
S	Backlash	Standard
0050	Transmission ratio ($i \times 10$)	$i = 5$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

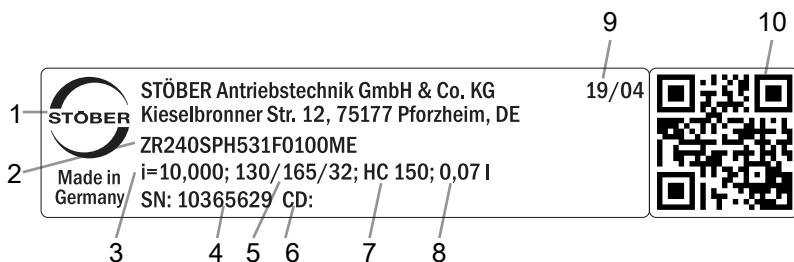

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

- For axial locking (optional), see the chapter [▶ 9.3]
- Socket wrench insert for mounting the motor on the gear unit using the ME/MEL motor adapter (optional)

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 9.5.1].

9.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

9.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

9.5 Product description

9.5.1 Input options

In this chapter, you will find all available input options:

ME motor adapter

EZ synchronous servo motor

LM Lean motor

Catalog ID 443137_en

Catalog ID 443286_en

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

9.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

9.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gear ing quality is 6.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	8	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

9.5.3.1 Pinion position

The pinion can be fastened to the shaft in two different attachment positions:

- The tooth is flush with the shaft end (Pos. E)
- The tooth is flush with the shaft shoulder (Pos. S: For higher permitted feed forces, see the Selection tables chapter)

Please specify the desired attachment position when placing your order.

9.5.4 Installation conditions

The specified torques and forces only apply when gear units are fastened on the machine side using screws of strength class 10.9. In addition, the gear housings must be adjusted at the pilot. The machine-side fit must be H7.

9.5.5 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

9.5.5.1 Rack and pinion drive lubrication

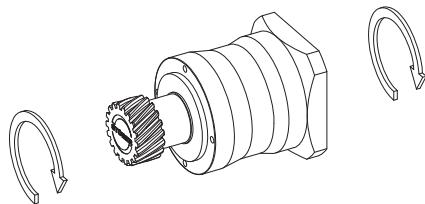

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

9.5.6 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 80 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable
Protection class: ¹	
Planetary gear unit	IP64
Pinion/gear rack	IPXX

9.5.7 Direction of rotation

The input and output rotate in the same direction.

9.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

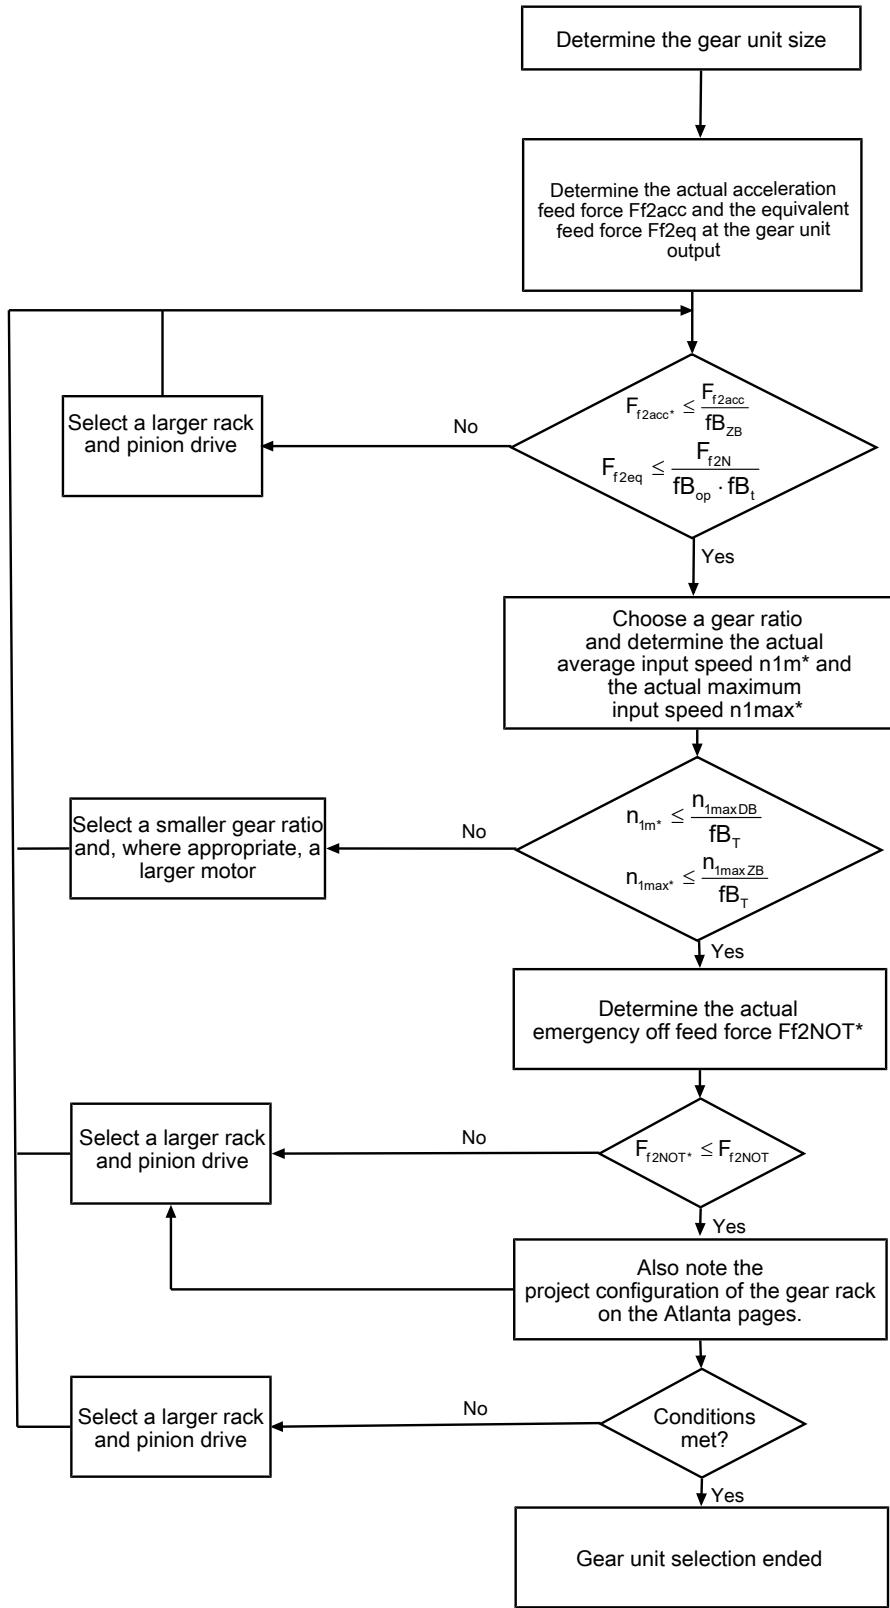

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

9.6.1 Drive selection

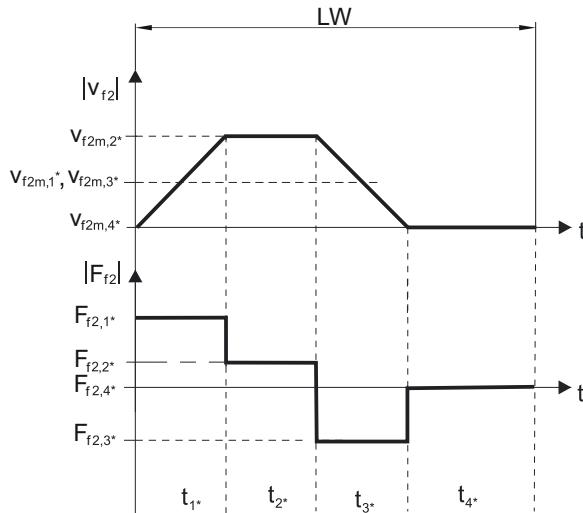

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} . The forces depend on the pinion position (E or S). The speeds are partially dependent on the mounting position.

The values for fB_t , fB_{op} , fB_t and fB_{zB} can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

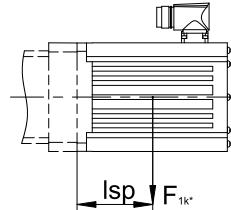

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

9.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
PE221_ME	10
PE222_ME	10
PE321_ME	20
PE322_ME	10
PE421_ME	40
PE422_ME	20
PE521_ME	80
PE522_ME	40

The values also apply to the MEL motor adapter.

9.6.3 Radial shaft seal rings

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

9.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

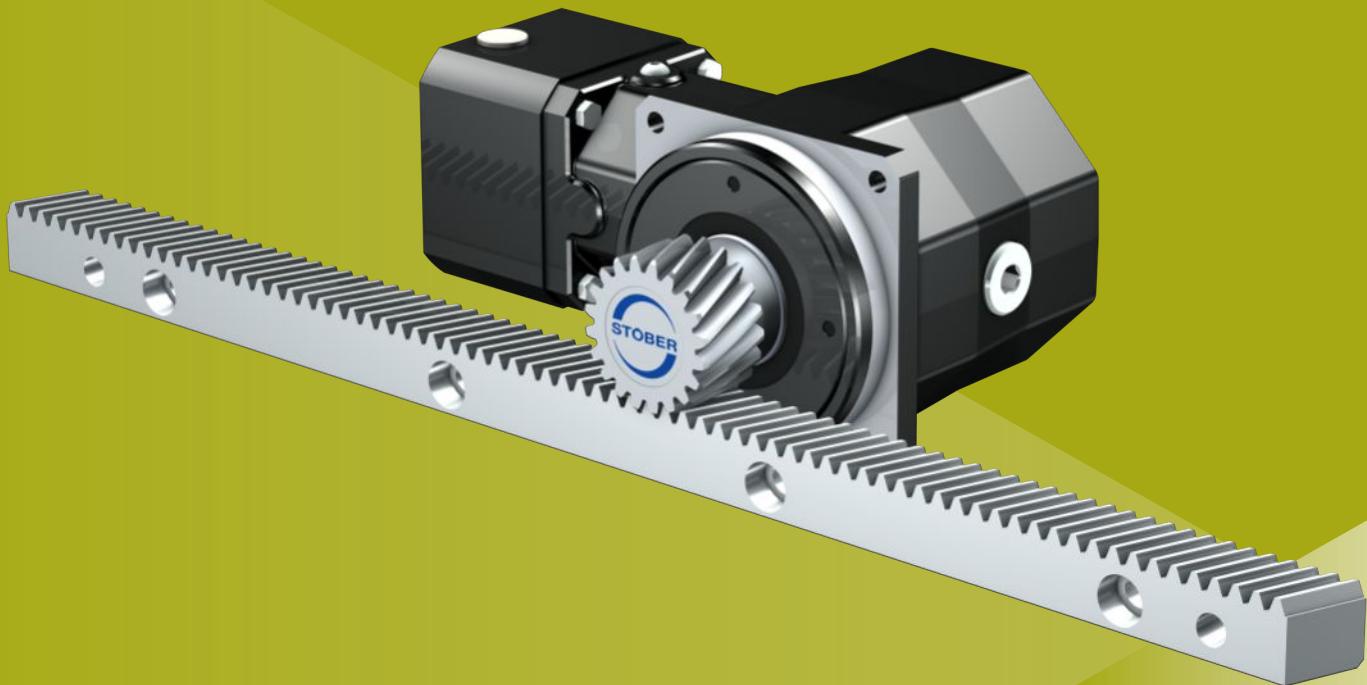

Enter the ID of the documentation in the Search term field.

€ Economy | €€€€€ Premium

Technical data

m_n	2 – 4 mm
z	18 – 25
F_{f2acc}	3.2 – 11 kN
$V_{f2maxZB}$	0.07 – 3 m/s
Δs	37 – 44 µm

10.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 10.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration of the thermal limiting performance
- C_{lin} : Pinion position S

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

10.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

Dimension az in the tables of dimensions applies to Atlanta gear racks. In general: $az = \frac{1}{2} d_0 + h_0 + x * m_n$

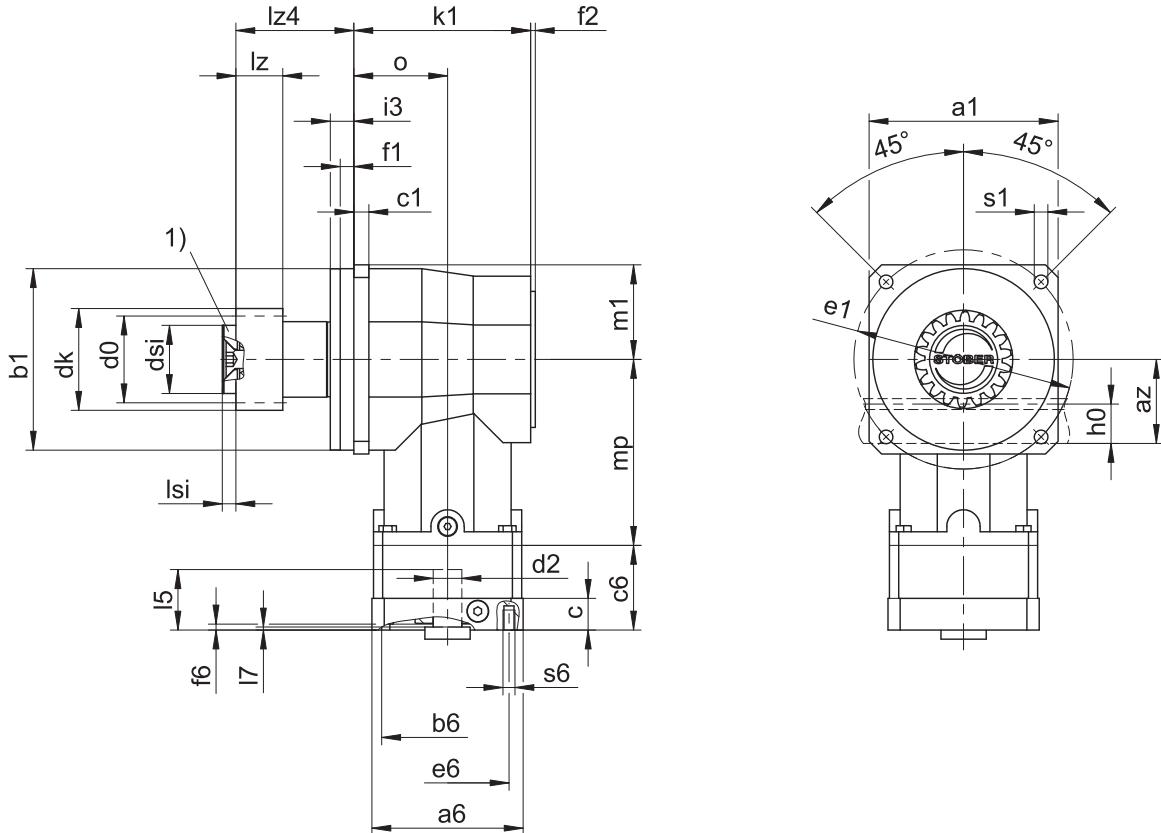

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

ZV_KS402_ME	60^{H7}	75	19	40	75	18	51.5	3.5	3.0	M5
ZV_KS403_ME	40^{H7}	63	14	30	55	15	32.0	3.5	3.0	M5
ZV_KS502_ME	95^{H7}	115	24	42	100	21	56.0	4.0	3.0	M8
ZV_KS503_ME	60^{H7}	75	19	40	75	18	51.5	3.5	3.0	M5
ZV_KS702_ME	110^{H7}	130	32	50	120	24	67.5	4.0	3.5	M8
ZV_KS703_ME	95^{H7}	115	24	42	100	21	56.0	4.0	3.0	M8

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c_6 and l_5 are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

Note that when dimension c is lengthened, dimensions c6 and l5 are also lengthened accordingly.

You will find additional motor connection dimensions for motor adapters ME and MEL in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

10.3.3 Oil expansion tank

Dimensions

Type	dab	lab	hab	hab1
ZV_KS403_	34	100	74.5	85
ZV_KS503_	39	122	92.0	105
ZV_KS703_	49	134	109.5	132

More information can be found in the chapter [▶ 10.6.4]

10.4 Type designation

In this chapter, you can find an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

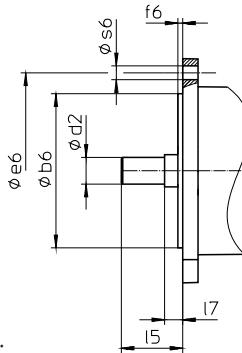

Example code

Z	V	2	20	S	S	KS	4	0	2	P	F	0080	ME
---	---	---	----	---	---	----	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
V	Design	Plug-on pinion
2	Module	$m_n = 2$ (example)
20	Number of teeth	$z = 20$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
E	Pinion position	Shaft end
S		Shaft shoulder
KS	Type	Right-angle servo gear unit
4	Size	4 (example)
0	Generation	Generation 0
2	Stages	Two-stage
3		Three-stage
P	Shaft	Solid shaft with feather key
F	Housing	Standard
0080	Transmission ratio ($i \times 10$)	$i = 8$ (example)
ME	Motor adapter	Motor adapter with EasyAdapt coupling
MEL		Motor adapter with EasyAdapt coupling for large motors

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at

<https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

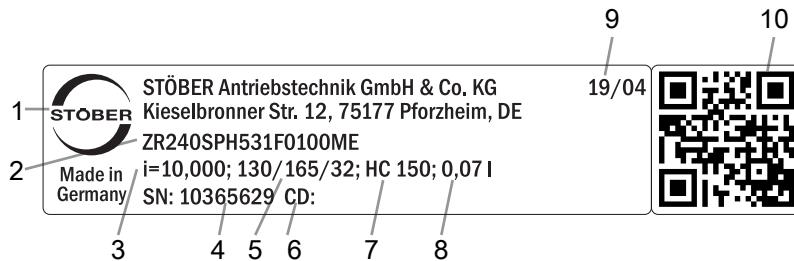

- Mounting position, see the chapter [▶ 10.5.5]
- The position of locking screw access, see the chapter [▶ 10.5.7]
- Radial shaft seal rings at the output, made of NBR or FKM (optional), see the chapter [▶ 10.6.3]
- Attachment of oil expansion tank (optional) on gear unit side 1 or 2 (required without exception for three-stage gear units in mounting position EL5), see the chapter [▶ 10.6.4]
- Axial locking (optional), see the chapter [▶ 10.3]

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter.

All input options available upon request are listed in the chapter [▶ 10.5.1].

10.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

10.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

10.5 Product description

10.5.1 Input options

In this chapter, you will find all available input options:

ME motor adapter

EZ synchronous servo motor

Catalog ID 443137_en

Catalog ID 443286_en

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

10.5.2 Motor adapter with EasyAdapt coupling (ME/MEL)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- One-piece, rugged clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor
- For reduced backlash, the motor shaft bearing must have an axially backlash-free design

Fig. 1: EasyAdapt coupling

10.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand $19^\circ 31' 42''$). The pinion gear ing quality is 6.

The corresponding gear rack must have a right-hand design ($19^\circ 31' 42''$) and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	8	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

10.5.3.1 Pinion position

The pinion can be fastened to the shaft in two different attachment positions:

- The tooth is flush with the shaft end (Pos. E)
- The tooth is flush with the shaft shoulder (Pos. S: For higher permitted feed forces, see the Selection tables chapter)

Please specify the desired attachment position when placing your order.

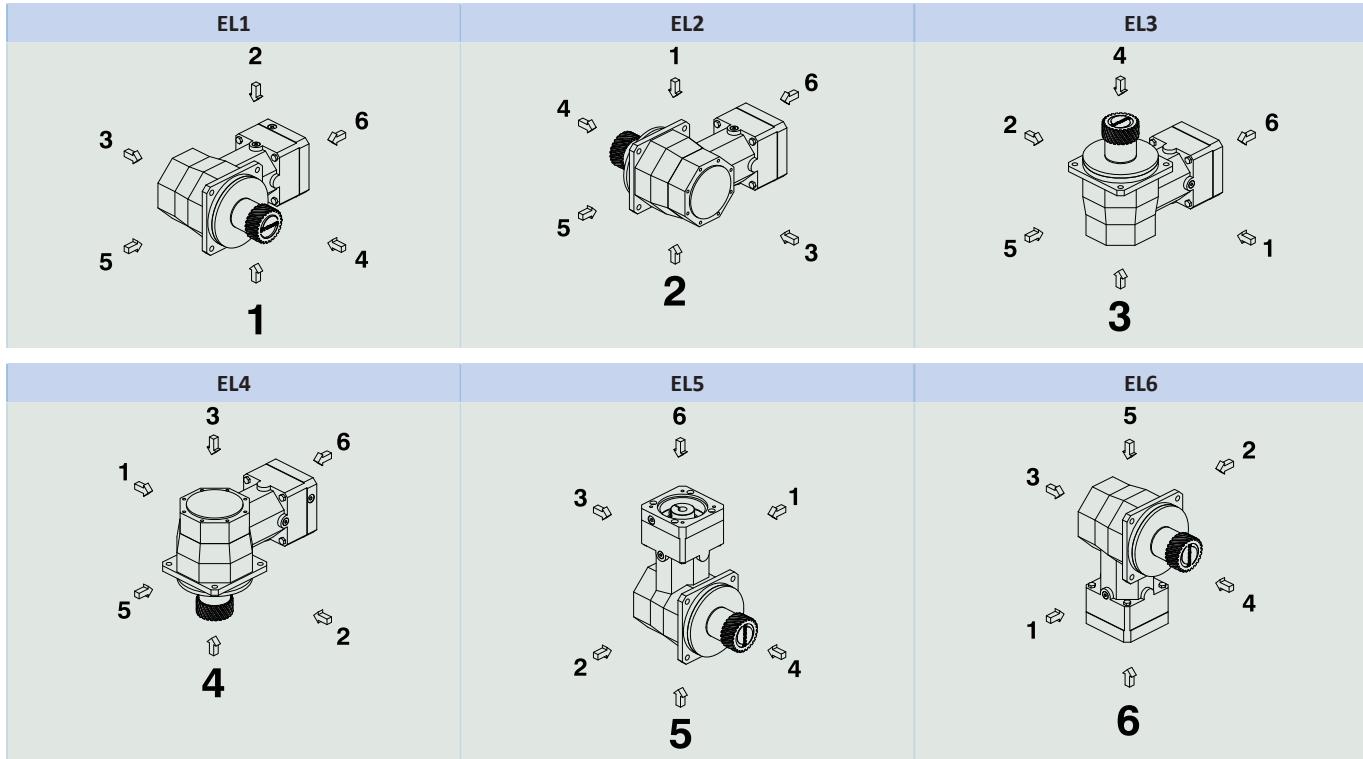

10.5.4 Installation conditions

The specified torques and forces only apply when gear units are fastened on the machine side using screws of strength class 10.9. In addition, the gear housings must be adjusted at the pilot. The machine-side fit must be H7.

10.5.5 Mounting positions

The following table shows the standard mounting positions.

The numbers identify the gear unit sides. The mounting position is defined by the gear side facing downwards.

Since the lubricant filling volume of the gear unit depends on the mounting position, the mounting position must be specified when ordering.

10.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate. The filling volume and the structure of the gear units depend on the mounting position.

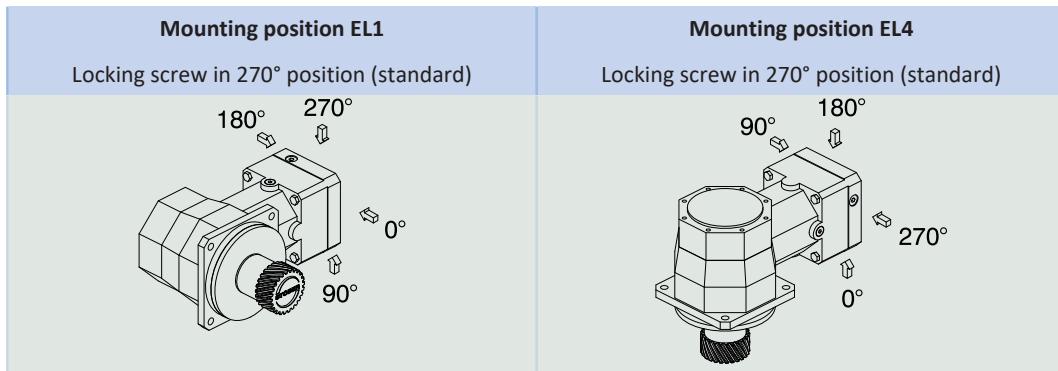

Only install the gear units in the intended mounting position! Reposition the gear units only after consulting STOBER. Otherwise, STOBER assumes no liability for the gear units.

You will receive lubricants for use in the food industry upon request.

10.5.6.1 Rack and pinion drive lubrication

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

10.5.7 Position of locking screw access

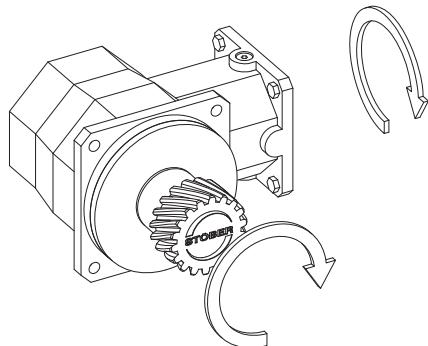

Indicate variations for your gear unit in the order.

Note that the access hole for the locking screw also rotates when the gear unit is rotated to another mounting position.

10.5.8 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 90 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ¹	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

10.5.9 Direction of rotation

The pictures show mounting position EL1.

10.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

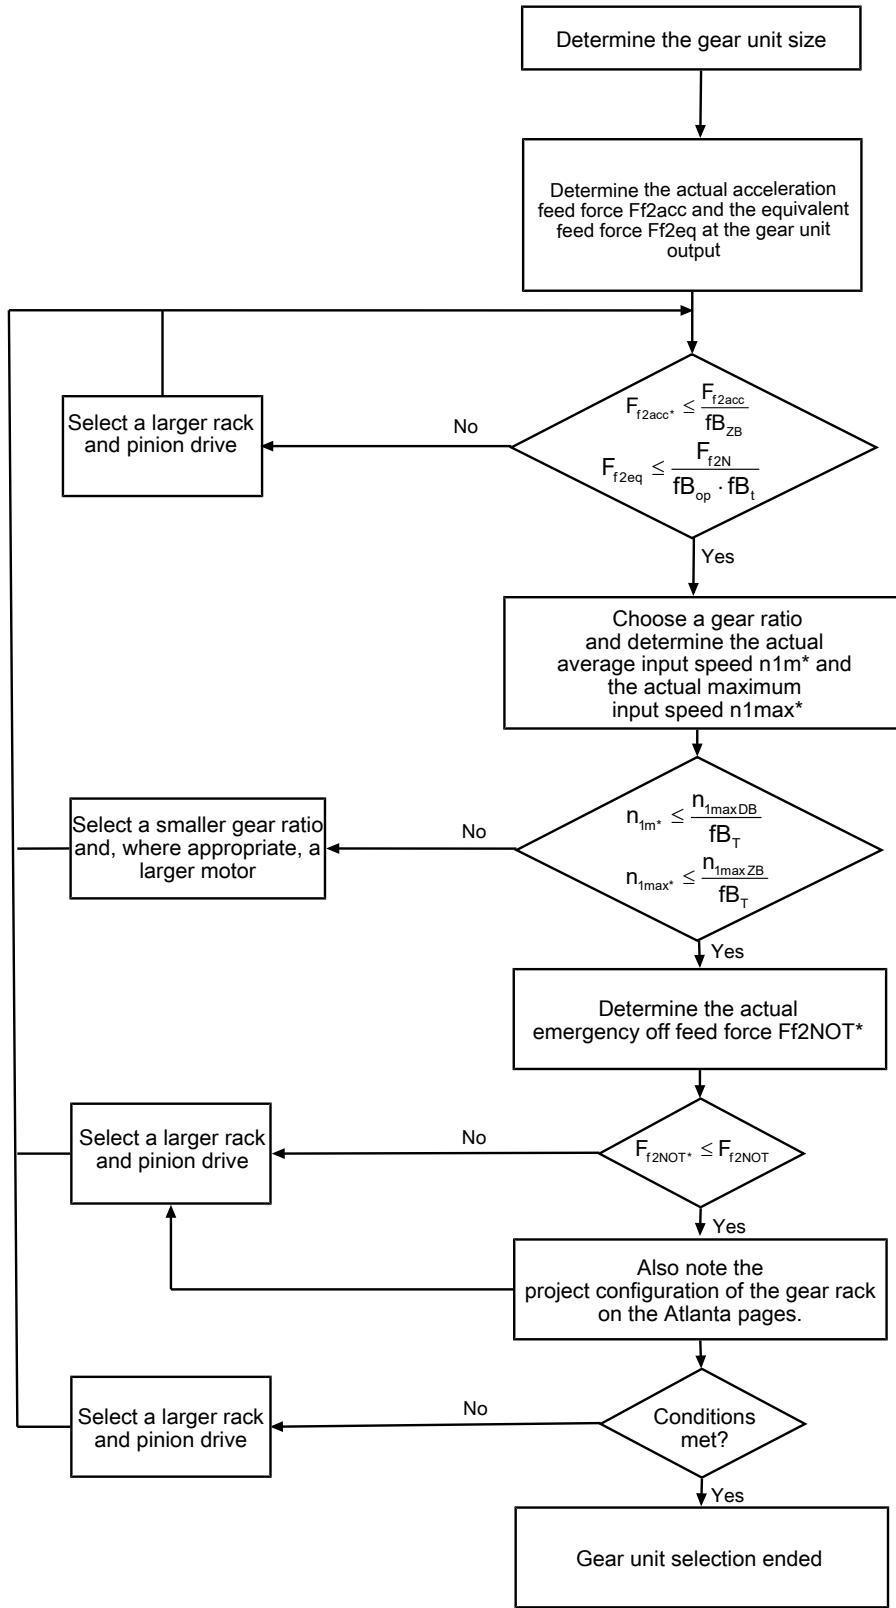

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

10.6.1 Drive selection

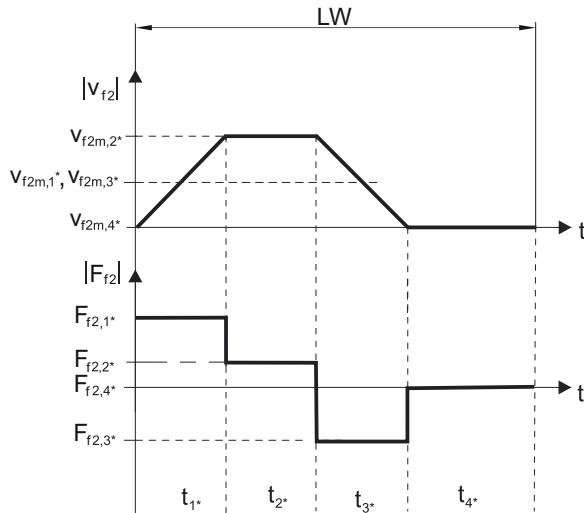

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} . The forces depend on the pinion position (E or S). The speeds are partially dependent on the mounting position.

The values for fB_t , fB_{op} , fB_t and fB_{zB} can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L*$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L*$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.00
Reversing load cyclic operation	1.00

Run time	f_B_t
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{ZB}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

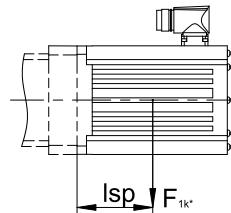

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

10.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
KS402_ME	20
KS403_ME	10
KS502_ME	40
KS503_ME	20
KS702_ME	80
KS703_ME	40

The values also apply to the MEL motor adapter.

10.6.3 Recommendation for radial shaft seal rings

For a duty cycle > 60% and higher surrounding temperatures, we recommend radial shaft seal rings made of FKM at the output.

Properties:

- Excellent temperature resistance
- High chemical stability
- Very good resistance to aging
- Excellent resistance in oils and greases
- For use in the food, beverage and pharmaceutical industries

Leak-proofness

Our gear units are equipped with high-quality radial shaft seal rings and checked for leaks. However, a leak cannot be fully ruled out over the length of use of a gear unit. If you use a gear unit with goods incompatible with the lubricant, you must take measures to prevent direct contact with the gear unit lubricant in case of a leak.

10.6.4 Oil expansion tank

The gear units have a higher fill level in mounting position EL5. The oil expansion tank prevents oil from escaping out of the gear unit.

Notes

- Three-stage KS gear units in mounting position EL5 can be used only in combination with an oil expansion tank!
- It is not possible to use an oil expansion tank if the plug connector and oil expansion tank are on the same side!
- Please specify the attachment side (gear unit side 1 or 2) in the order.
- Note that mounting an oil expansion tank is not possible with every motor adapter (collision between motor adapter and oil expansion tank).

10.7 Additional documentation

Additional documentation related to the product can be found at

<http://www.stoeber.de/en/downloads/>

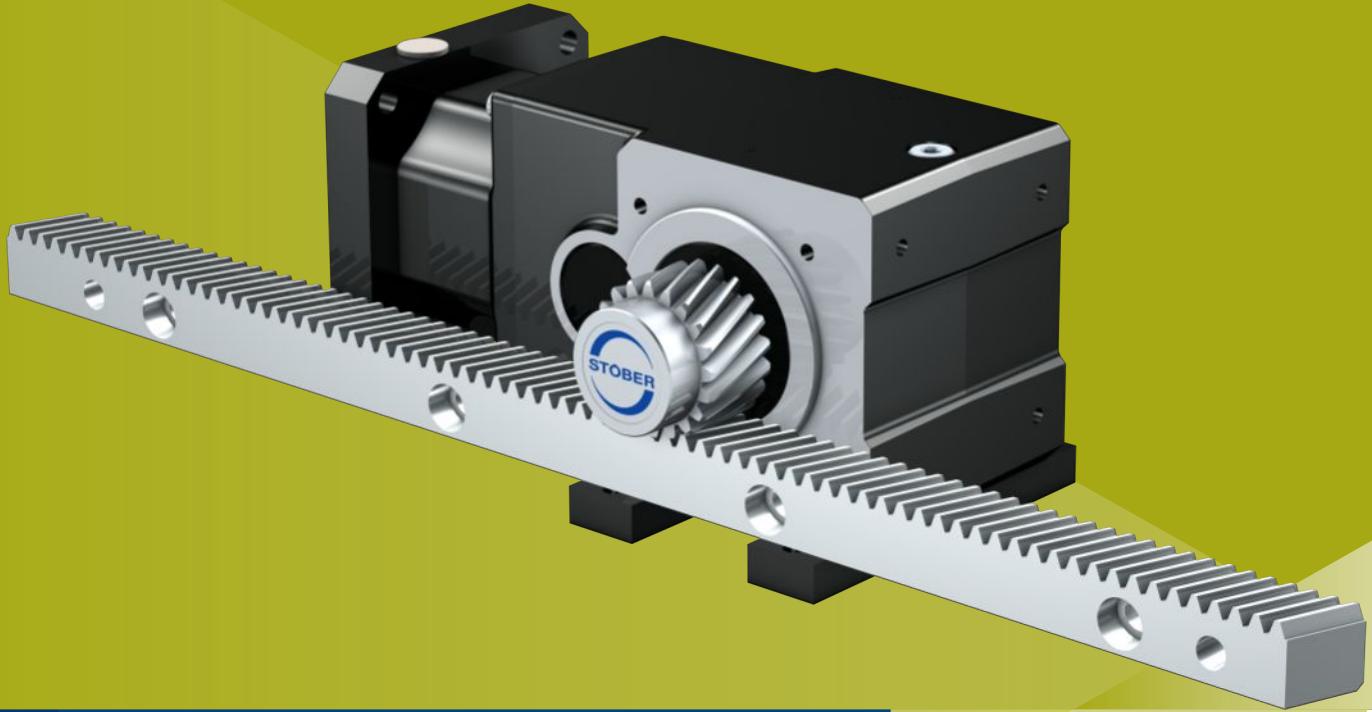

Enter the ID of the documentation in the Search term field.

Technical data

m_n	2 mm
z	16 – 20
F_{f2acc}	1.3 – 2.7 kN
$V_{f2maxZB}$	0.33 – 3.3 m/s
Δs	99 – 123 µm

11.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 11.5.3]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration of the thermal limiting performance
- C_{lin} : Pinion position S

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

11.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

Dimension a_z in the tables of dimensions applies to Atlanta gear racks. In general: $a_z = \frac{1}{2} d_0 + h_0 + x * m_n$

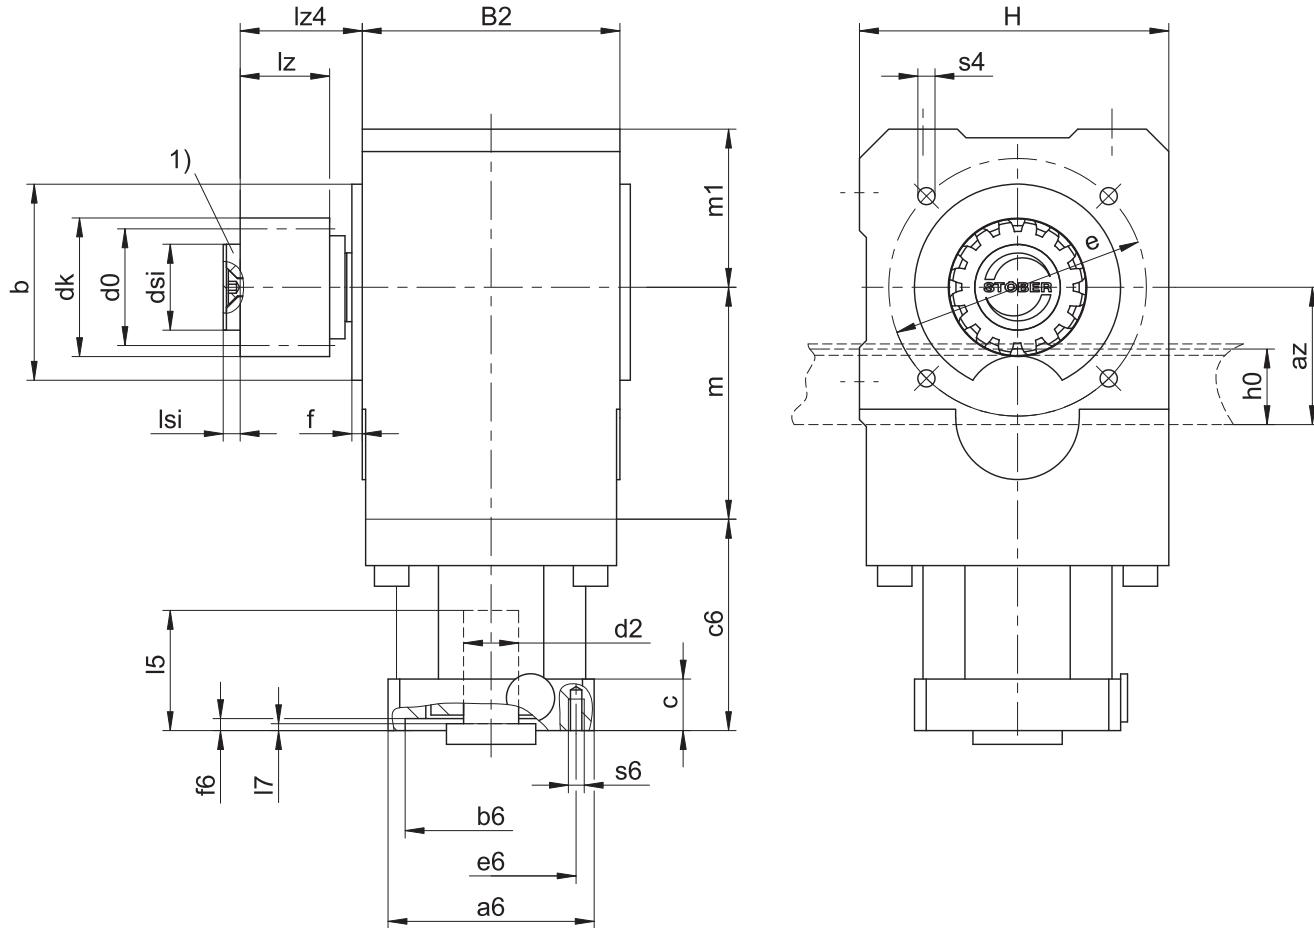

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

11.3.1 Pinion position E

1) Axial locking (optional)

Output dimensions

ZV2_KL202_MQ	60 ¹⁷	75	19	40	75	18	69.5	3.5	3	M5

In the table above, you will find example dimensions for the motor connection for the MQ motor adapter.

Note that when dimension c is lengthened, dimensions c6 and l5 are lengthened accordingly.

You will find additional motor connection dimensions for the MQ motor adapter in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

11.4 Type designation

In this chapter, you can find an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

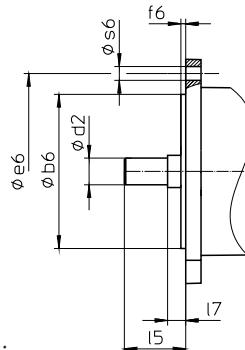

Example code

Z	V	2	20	S	S	KL	2	0	2	P	G	0080	MQ
---	---	---	----	---	---	----	---	---	---	---	---	------	----

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
V	Design	Plug-on pinion
2	Module	$m_n = 2$ (example)
20	Number of teeth	$z = 20$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
E	Pinion position	Shaft end
S		Shaft shoulder
KL	Type	Helical bevel gear unit
2	Size	2 (example)
0	Generation	Generation 0
2	Stages	Two-stage
P	Shaft	Solid shaft with feather key
G	Housing	Pitch circle diameter
0080	Transmission ratio ($i \times 10$)	$i = 8$ (example)
MQ	Motor adapter	Square motor adapter with backlash-free plug-in coupling

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

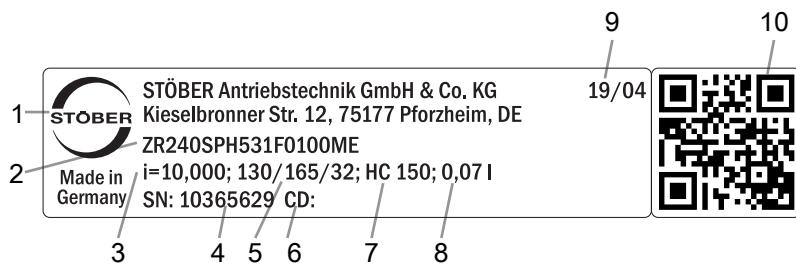

- Attachment of solid shaft: gear unit side 3 or 4
- Pitch circle diameter: gear unit side 3 or 4
- For the position of locking screw access, see the chapter [▶ 11.5.7]
- For axial locking (optional), see the chapter [▶ 11.3]

An explanation of the gear unit sides can be found in the chapter [▶ 11.5.5]

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 11.5.1].

11.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Serial number of the gear unit
5	Dimensions of the motor adapter (pilot/bolt circle/motor shaft diameter)
6	Customer-specific data
7	Lubricant specification
8	Lubricant fill volume
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

11.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

11.5 Product description

11.5.1 Input options

In this chapter, you will find all available input options:

MQ motor adapter EZ synchronous servo motor LM Lean motor

Catalog ID 443137_en

Catalog ID 443286_en

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

11.5.2 Square motor adapter with backlash-free plug-in coupling (MQ)

In this chapter, you will find a description of the backlash-free plug-in coupling (jaw coupling).

Properties:

- Fast and easy motor attachment
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 1: Backlash-free plug-in coupling

11.5.3 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gearing quality is 6.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	8	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

11.5.3.1 Pinion position

The pinion can be fastened to the shaft in two different attachment positions:

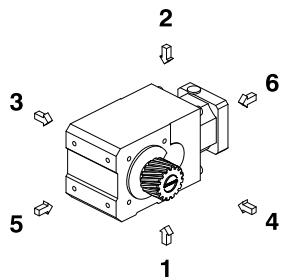

- The tooth ing is flush with the shaft end (Pos. E)
- The tooth ing is flush with the shaft shoulder (Pos. S: For higher permitted feed forces, see the Selection tables chapter)

Please specify the desired attachment position when placing your order.

11.5.4 Installation conditions

The specified torques and forces only apply when gear units are fastened on the machine side using screws of strength class 10.9. In addition, the gear housings must be adjusted at the pilot. The machine-side fit must be H7.

11.5.5 Gear unit sides

The numbers identify the gear unit sides.

11.5.6 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate.

You will receive lubricants for use in the food industry upon request.

11.5.6.1 Rack and pinion drive lubrication

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

11.5.7 Position of locking screw access

Mounting position EL1	Mounting position EL4
Locking screw in 270° position (standard)	Locking screw in 270° position (standard)
<p>180° 270° 90° 0°</p>	<p>90° 180° 270° 0°</p>

Indicate variations for your gear unit in the order.

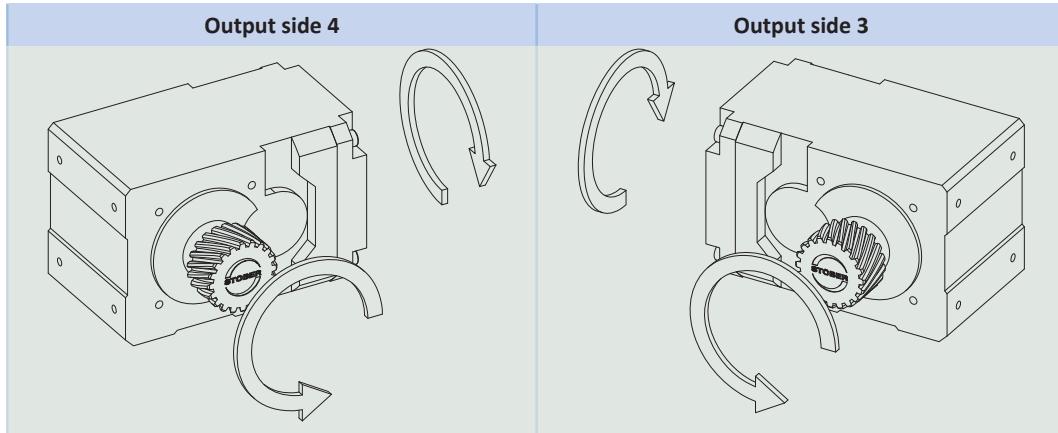

Note that the access hole for the locking screw also rotates when the gear unit is rotated to another mounting position.

11.5.8 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 80 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ¹	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

¹ Observe the protection class of all the components.

11.5.9 Direction of rotation

The pictures show mounting position EL1.

11.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

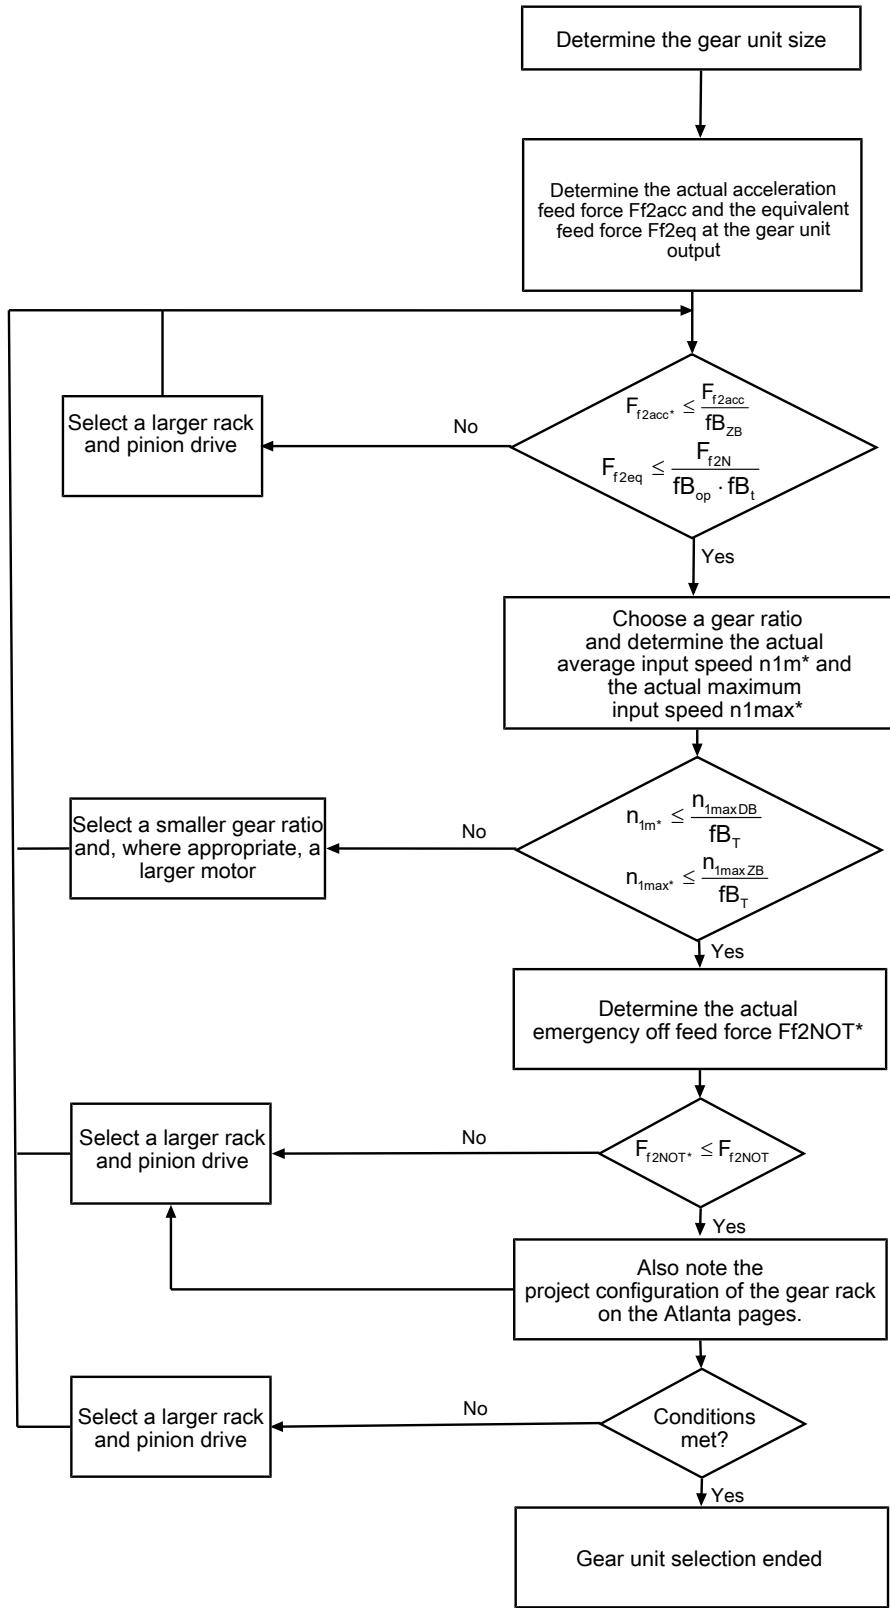

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

11.6.1 Drive selection

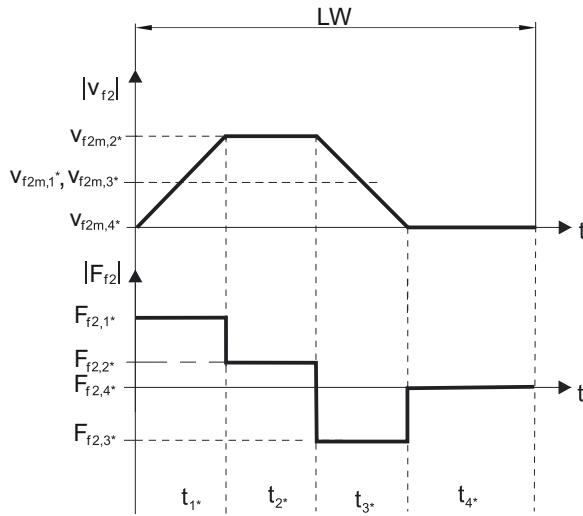

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} . The forces depend on the pinion position (E or S). The speeds are partially dependent on the mounting position.

The values for fB_T , fB_{op} , fB_t and fB_{zB} can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L*$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L*$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.25
Reversing load cyclic operation	1.40

Run time	f_B_t
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Cyclic operation	$f_{B_{zb}}$
≤ 1000 load changes/hour (LW/h)	1.00
> 1000 load changes/hour (LW/h)	1.15

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

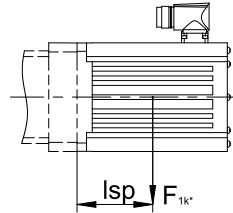

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

11.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
KL1_MQ	15
KL2_MQ	20

11.7 Additional documentation

Rack and pinion drives

ZVK

12.1 Overview

Highly rigid right-angle gear units with plug-on pinion

Features

Power density	★★★★★
Linear clearance	★★★★★
Price category	€
Smooth operation	★★★★★
Linear rigidity	★★★★★
Mass moment of inertia	★★★★★
Ready-to-install drive solution	✓
Pinion gearing quality 6 (DIN 3962)	✓
Helical gearing	✓
Case-hardened and smoothed	✓

Key ★★★★★ good | ★★★★★ excellent

€ Economy | €\$\$\$\$ Premium

Technical data

m_n	2 – 4 mm
z	18 – 25
F_{f2acc}	2.7 – 15 kN
$V_{f2maxZB}$	0.06 – 3.8 m/s
Δs	12 – 111 μm

12.2 Selection tables

The technical data specified in the selection tables applies to:

- De-energized installation
- Permanent lubrication with the lubricants specified in the Atlanta product catalog
- Material combinations as described in the chapter [▶ 12.5.4]
- Installation altitudes up to 1000 m above sea level
- Surrounding temperatures from 0 °C to 40 °C
- Without consideration of the thermal limiting performance
- C_{lin} : Pinion position S

For all other technical data, refer to <https://configurator.stoeber.de/en-US/>.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

12.3 Dimensional drawings

In this chapter, you can find the dimensions of the rack and pinion drives with motor adapter.

Dimension az in the tables of dimensions applies to Atlanta gear racks. In general: $az = \frac{1}{2} d_0 + h_0 + x * m_n$

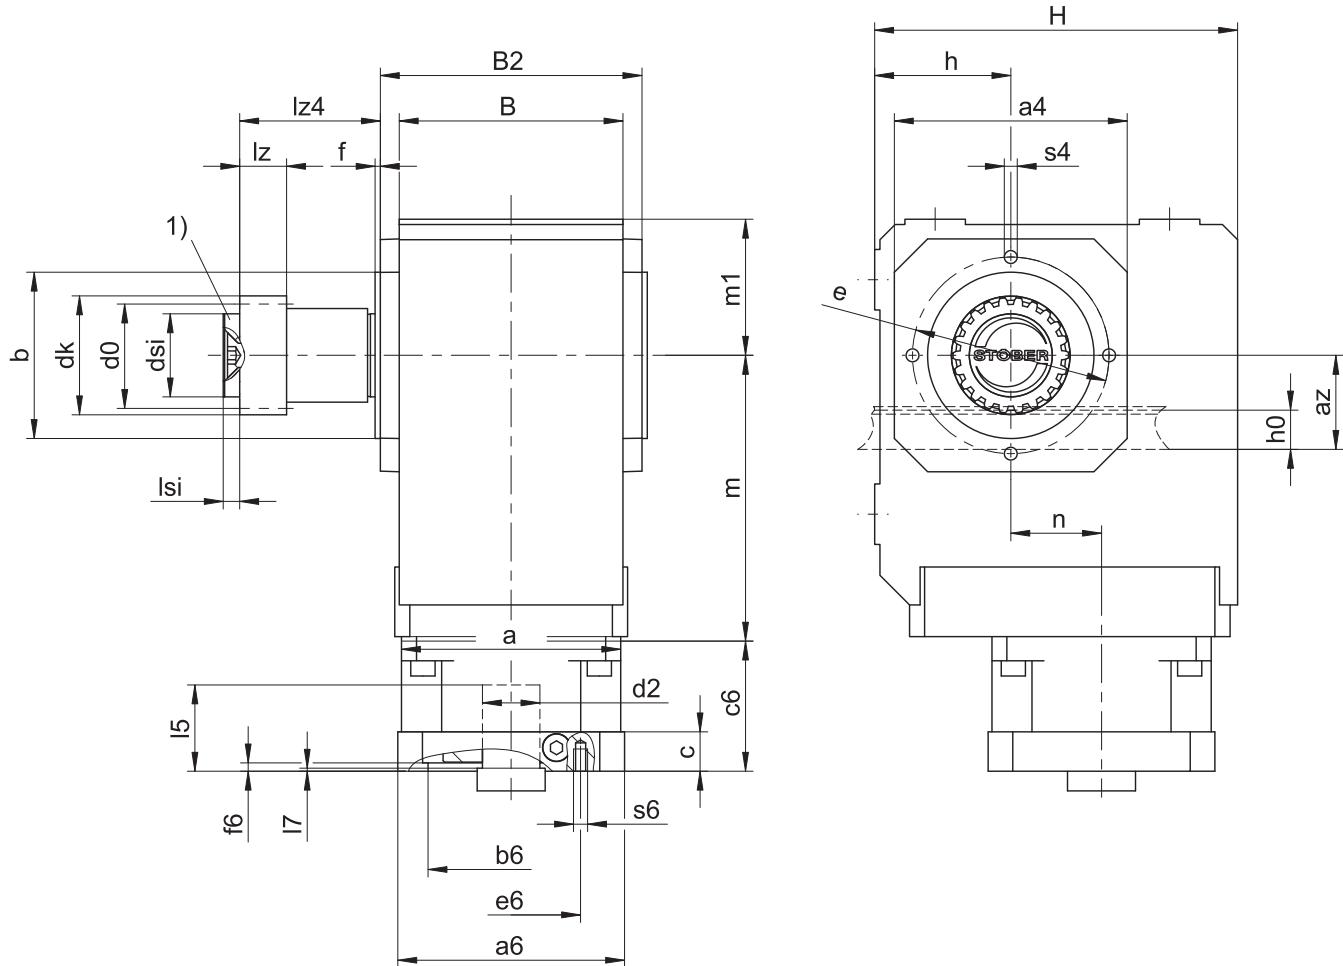

The pinion of the rack and pinion drive is helical (left-hand $19^\circ 31' 42''$). The pinion gearing quality is 5.

Dimensions can exceed the specifications of ISO 2768-mK due to casting tolerances or accumulation of individual tolerances.

We reserve the right to make dimensional changes due to ongoing technical development.

You can download 3D models of our standard drives at <https://configurator.stoeber.de/en-US/>.

12.3.1 Pinion position E

1) Axial locking (optional)

Example dimensions for the motor connection

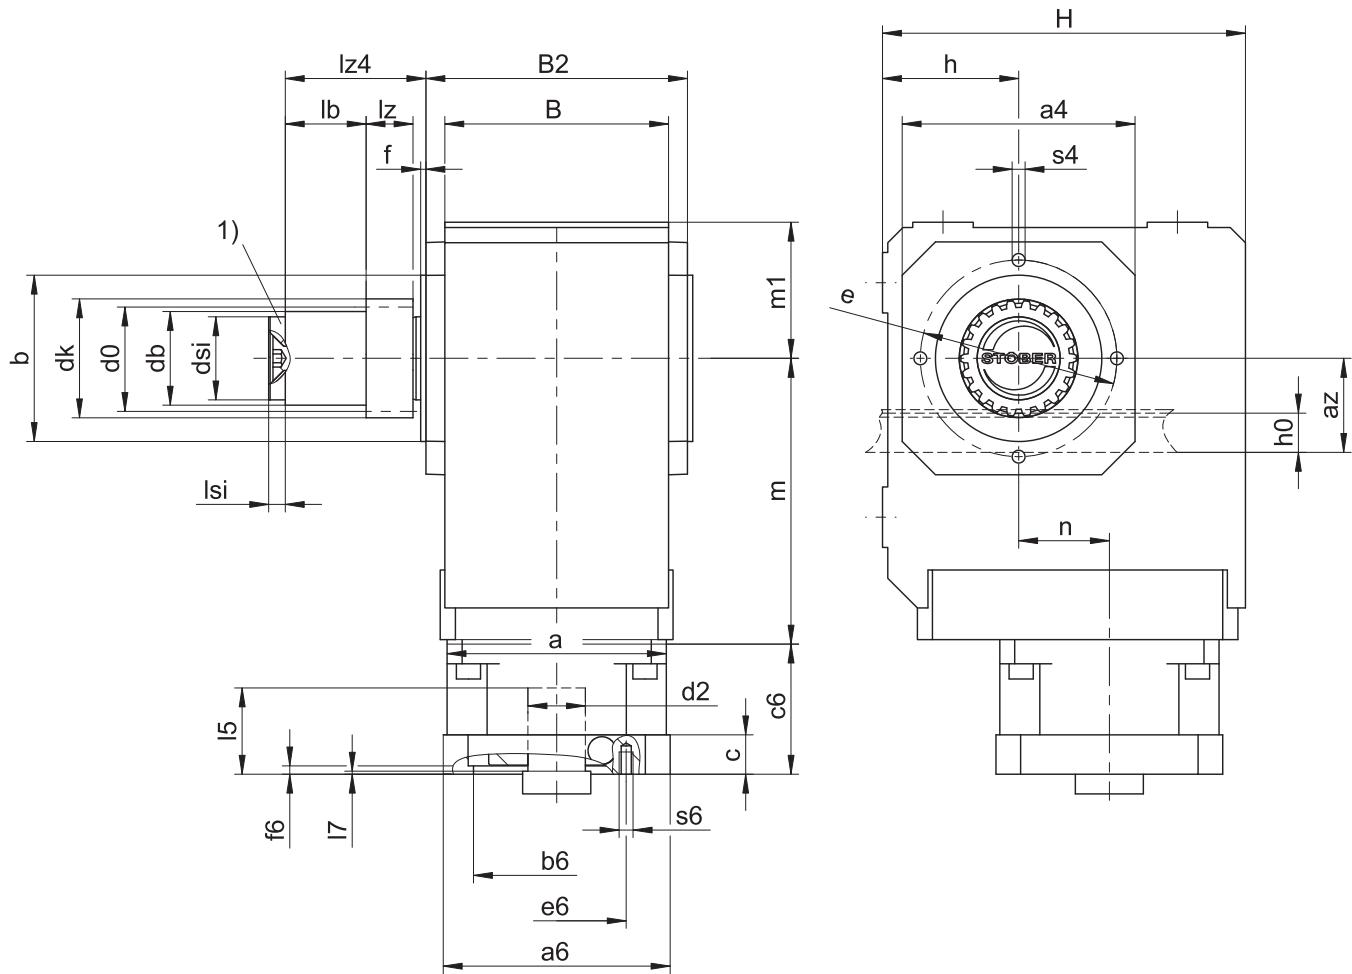

Type	Øb6	Øe6	Ød2max	l5	□a6	c	c6	f6	l7	s6
ME10	95 ^{H7}	115	19	41	100	21	61	4.0	3.0	M8
ME20	110 ^{H7}	130	32	53	120	24	74	4.0	3.5	M8
ME30	130 ^{H7}	165	38	62	150	26	86	5.5	4.5	M10
ME40	180 ^{H7}	215	48	82	204	35	123	5.5	5.5	M12

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6 and l5 are also lengthened accordingly.

You will find additional motor connection dimensions for the ME motor adapter in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

Example dimensions for the motor connection

Type	Øb6	Øe6	Ød2max	l5	□a6	c	c6	f6	l7	s6
ME10	95 ^{H7}	115	19	41	100	21	61	4.0	3.0	M8
ME20	110 ^{H7}	130	32	53	120	24	74	4.0	3.5	M8
ME30	130 ^{H7}	165	38	62	150	26	86	5.5	4.5	M10
ME40	180 ^{H7}	215	48	82	204	35	123	5.5	5.5	M12

In the table above, you will find example dimensions for the motor connection for the ME motor adapter.

Note that when dimension c is lengthened, dimensions c6 and l5 are also lengthened accordingly.

You will find additional motor connection dimensions for the ME motor adapter in our STOBER Configurator at <https://configurator.stoeber.de/en-US/>. Here, you can directly download a 3D model of your drive.

12.4 Type designation

In this chapter, you can find an explanation of the type designation with the associated options.

Additional ordering information not included in the type designation can be found at the end of the chapter.

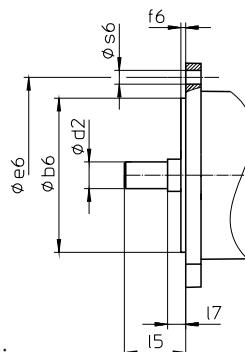

Example code

Z	V	3	22	S	S	K	4	0	2	V	G	0084	ME30
---	---	---	----	---	---	---	---	---	---	---	---	------	------

Explanation

Code	Designation	Design
Z	Type	Rack and pinion drive
V	Design	Plug-on pinion
3	Module	$m_n = 3$ (example)
22	Number of teeth	$z = 22$ (example)
S	Tooth ing	Helical (left-hand $19^\circ 31' 42''$)
E	Pinion position	Shaft end
S		Shaft shoulder
K	Type	Helical bevel gear unit
4	Size	4 (example)
0	Generation	Generation 0
1		Generation 1
2	Stages	Two-stage
3		Three-stage
V	Shaft	Solid shaft
G	Housing	Pitch circle diameter
0084	Transmission ratio ($i \times 10$ rounded)	$i = 8.377$ (example)
ME30	Motor adapter	ME30 motor adapter (example) with EasyAdapt coupling
MQ		Square motor adapter with backlash-free plug-in coupling
MB ¹		ServoStop motor adapter with brake

To complete the type designation, also specify the following in your order:

- Motor type or motor dimensions:

To choose a suitable motor connection, use the STOBER Configurator at <https://configurator.stoeber.de/en-US/> and choose your motor or the dimensions of the motor connection.

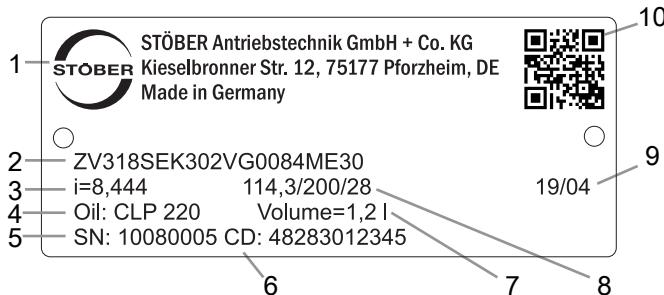

- Mounting position, see the chapter [▶ 12.5.6]
- Attachment of solid shaft: gear unit side 3 or 4
- Pitch circle diameter: gear unit side 3 or 4
- Backlash: Standard/class II/class I. Backlash class II and class I for an additional charge.
- For axial locking (optional), see the chapter [▶ 12.3]
- Position of locking screw access, see the chapter [▶ 12.5.8]
- ZV_K102_, ZV_K202_, ZV_K302_, ZV_K402_: Pinion lock for motor adapter (optional)
- Double seal for ME motor adapter (optional)

An explanation of the gear unit sides can be found in the chapter [▶ 12.5.6]

In this product catalog, you will find all the information about rack and pinion drives with a motor adapter. All input options available upon request are listed in the chapter [▶ 12.5.1].

12.4.1 Nameplate

An example gear unit nameplate is explained in the figure below.

Code	Designation
1	Name of manufacturer
2	Type designation
3	Gear ratio of the gear unit
4	Lubricant specification
5	Serial number of the gear unit
6	Customer-specific data
7	Lubricant fill volume
8	Dimensions of the motor adapter
9	Date of manufacture (year/calendar week)
10	QR code (link to product information)

12.4.1.1 Supporting documents

You can view or download supporting documents for the product by reading off the serial number on the nameplate of the product and entering it at the following address online:

<https://id.stober.com>

Alternatively, you can use a suitable mobile device to scan in the QR code on the nameplate of the product in order to be linked to the supporting documents.

12.5 Product description

12.5.1 Input options

This chapter shows you all available input options:

ME motor adapter

EZ synchronous servo motor

MB motor adapter

LM Lean motor

Catalog ID 443137_en

Catalog ID 443286_en

On request

On request

The corresponding catalogs can be found at <http://www.stoeber.de/en/downloads/>

Enter the ID of the catalog in the Search term field.

You can also acquire rack and pinion drives with low-backlash K gear units on request. To do so, send us an e-mail at sales@stoeber.de.

12.5.2 Motor adapter with EasyAdapt coupling (ME)

In this chapter, you will find a description of the EasyAdapt coupling.

Properties:

- Fast and easy motor attachment
- Rugged, patented clamp coupling with expanding function
- Lowest mass moments of inertia for the highest dynamics
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 1: EasyAdapt coupling

12.5.3 Square motor adapter with backlash-free plug-in coupling (MQ)

In this chapter, you will find a description of the backlash-free plug-in coupling (jaw coupling).

Properties:

- Fast and easy motor attachment
- Removal of the motor possible in any position
- With integrated thermal length compensation, compensates for linear expansion of the motor shaft
- Motor shaft decoupled from axial forces
- Balanced for smooth running without vibration, even at high speeds
- Large selection of motor shaft diameters and lengths
- Error-free, thanks to exact centering of the motor

Fig. 2: Backlash-free plug-in coupling

For all technical data and combinations with our gear units, refer to <https://configurator.stoeber.de/en-US/>.

12.5.4 Gear rack

The technical data specified in the Selection tables chapter applies only to gear rack combinations with the following characteristics:

The pinion of the rack and pinion drive is case-hardened and helical (left-hand 19° 31' 42"). The pinion gearing quality is 6.

The corresponding gear rack must have a right-hand design (19° 31' 42") and possess the following characteristics:

Module m_n [mm]	Minimum gear rack quality	Gear rack material
2 – 4	8	C45 inductively hardened

Also note the project configuration of the gear rack on the Atlanta pages.

12.5.4.1 Pinion position

The pinion can be fastened to the shaft in two different attachment positions:

- The toothing is flush with the shaft end (Pos. E)
- The toothing is flush with the shaft shoulder (Pos. S: For higher permitted feed forces, see the Selection tables chapter)

Please specify the desired attachment position when placing your order.

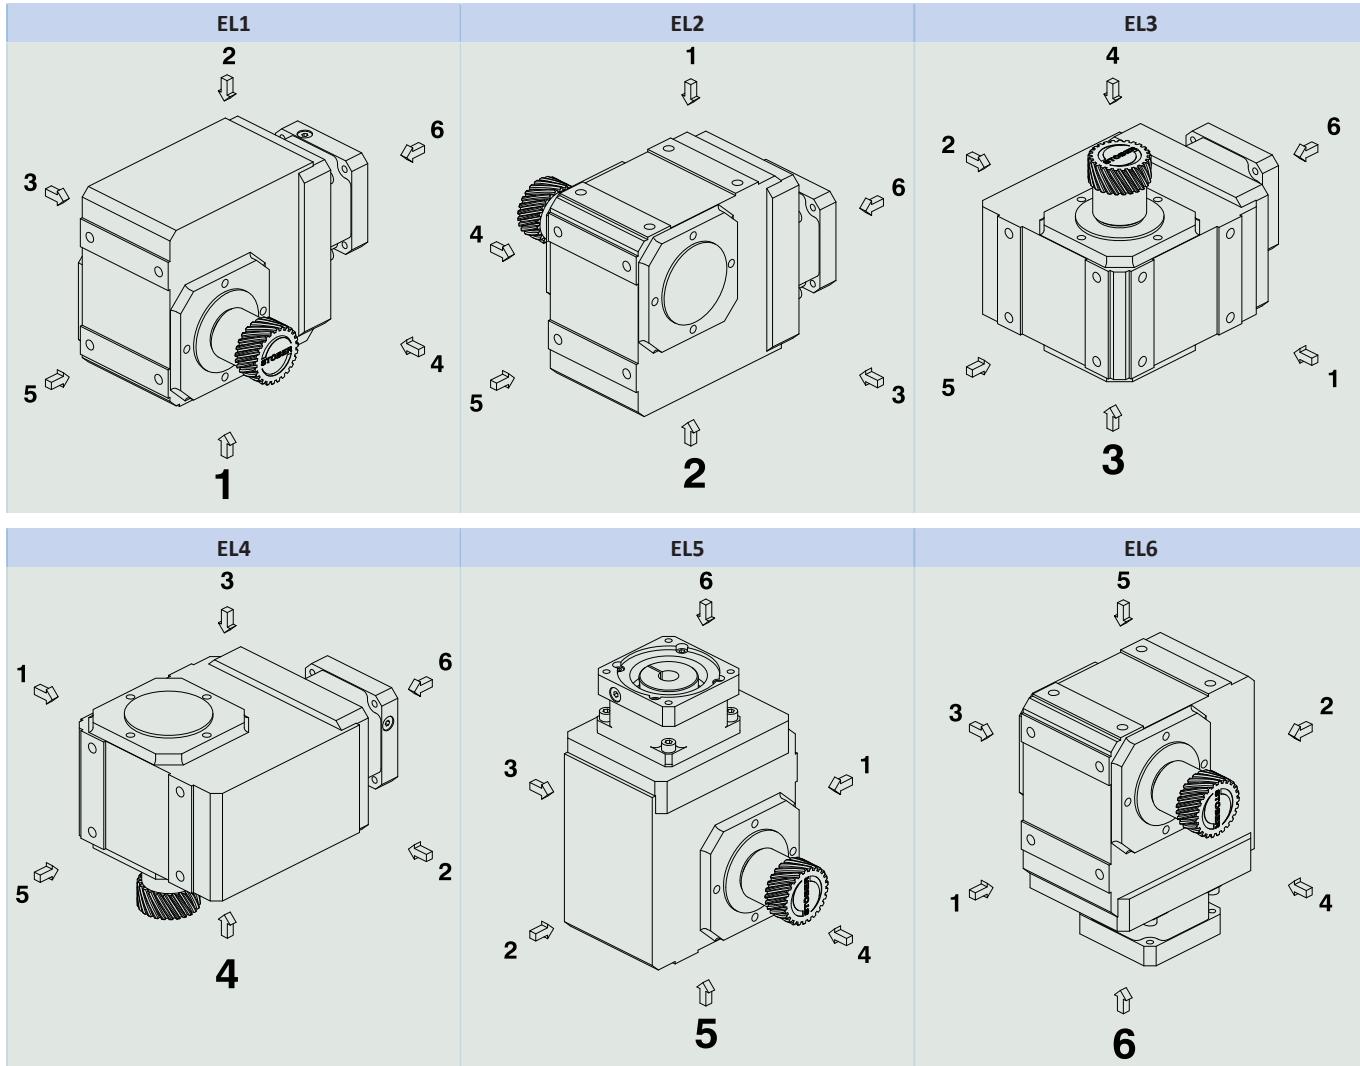

12.5 Installation conditions

The specified torques and forces only apply when gear units are fastened on the machine side using screws of strength class 10.9. In addition, the gear housings must be adjusted at the pilot. The machine-side fit must be H7.

12.5.6 Mounting positions

The following table shows the standard mounting positions.

The numbers identify the gear unit sides. The mounting position is defined by the gear side facing downwards.

Since the lubricant filling volume of the gear unit depends on the mounting position, the mounting position must be specified when ordering.

12.5.7 Lubricants

STOBER fills the gear units with the amount and type of lubricant specified on the nameplate. The filling volume and the structure of the gear units depend on the mounting position.

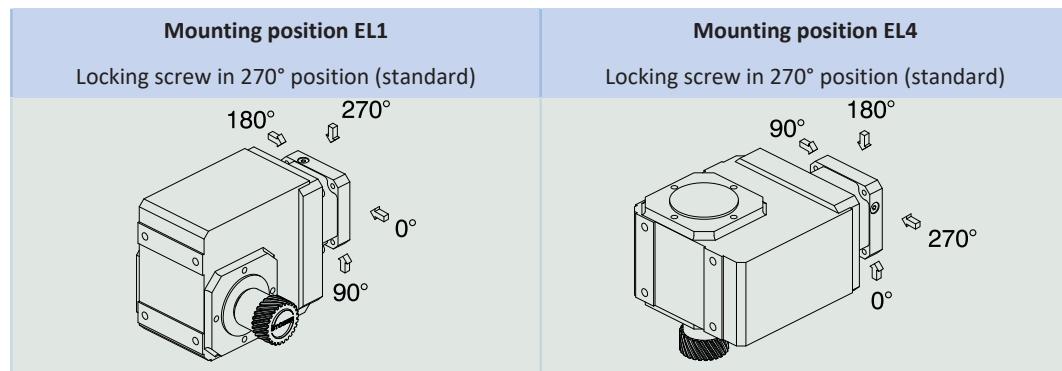

Only install the gear units in the intended mounting position! Reposition the gear units only after consulting STOBER. Otherwise, STOBER assumes no liability for the gear units.

You will receive lubricants for use in the food industry upon request.

12.5.7.1 Rack and pinion drive lubrication

Make sure the rack and pinion drive has permanent lubrication with the lubricants specified in the Atlanta product catalog.

12.5.8 Position of locking screw access

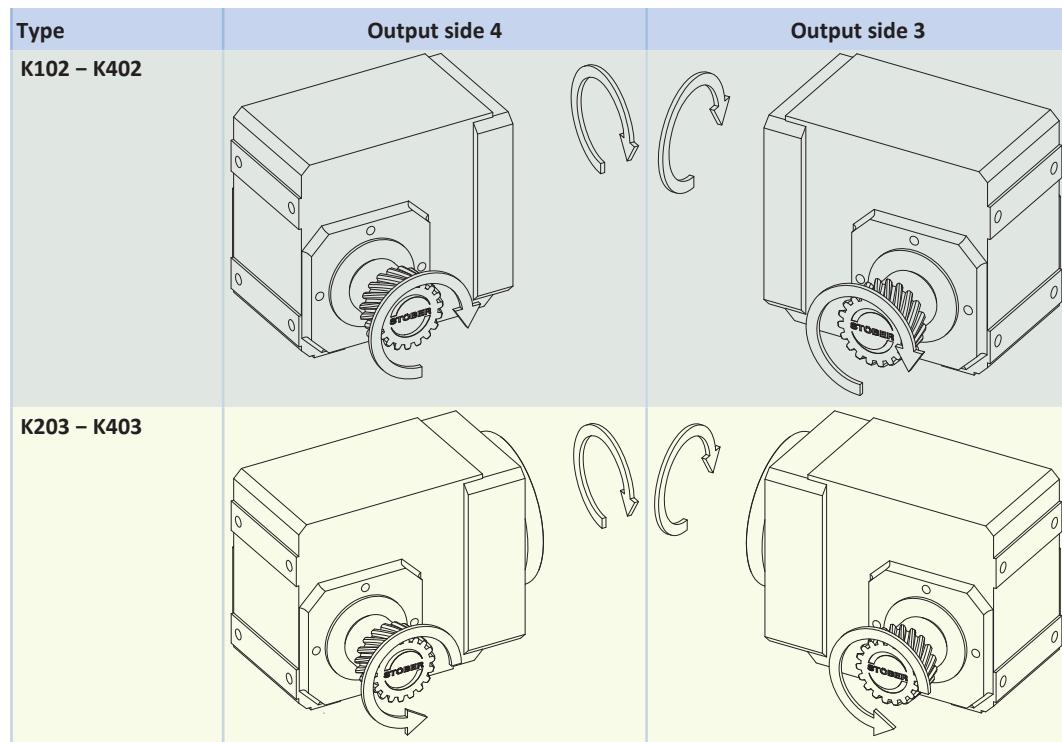

Indicate variations for your gear unit in the order.

Note that the access hole for the locking screw also rotates when the gear unit is rotated to another mounting position.

12.5.9 Other product features

Feature	Value
Max. permitted gear unit temperature (on the surface of the gear unit)	≤ 80 °C
Paint	Black RAL 9005
(ATEX) Directive 2014/34/EU (optional)	Not suitable.
Protection class: ²	
Planetary gear unit	IP65
Pinion/gear rack	IPXX

12.5.10 Direction of rotation

The pictures show mounting position EL1.

² Observe the protection class of all the components.

12.6 Project configuration

Project your drives using our SERVOsoft designing software. Download SERVOsoft for free at <https://www.stoeber.de/en/ServoSoft>.

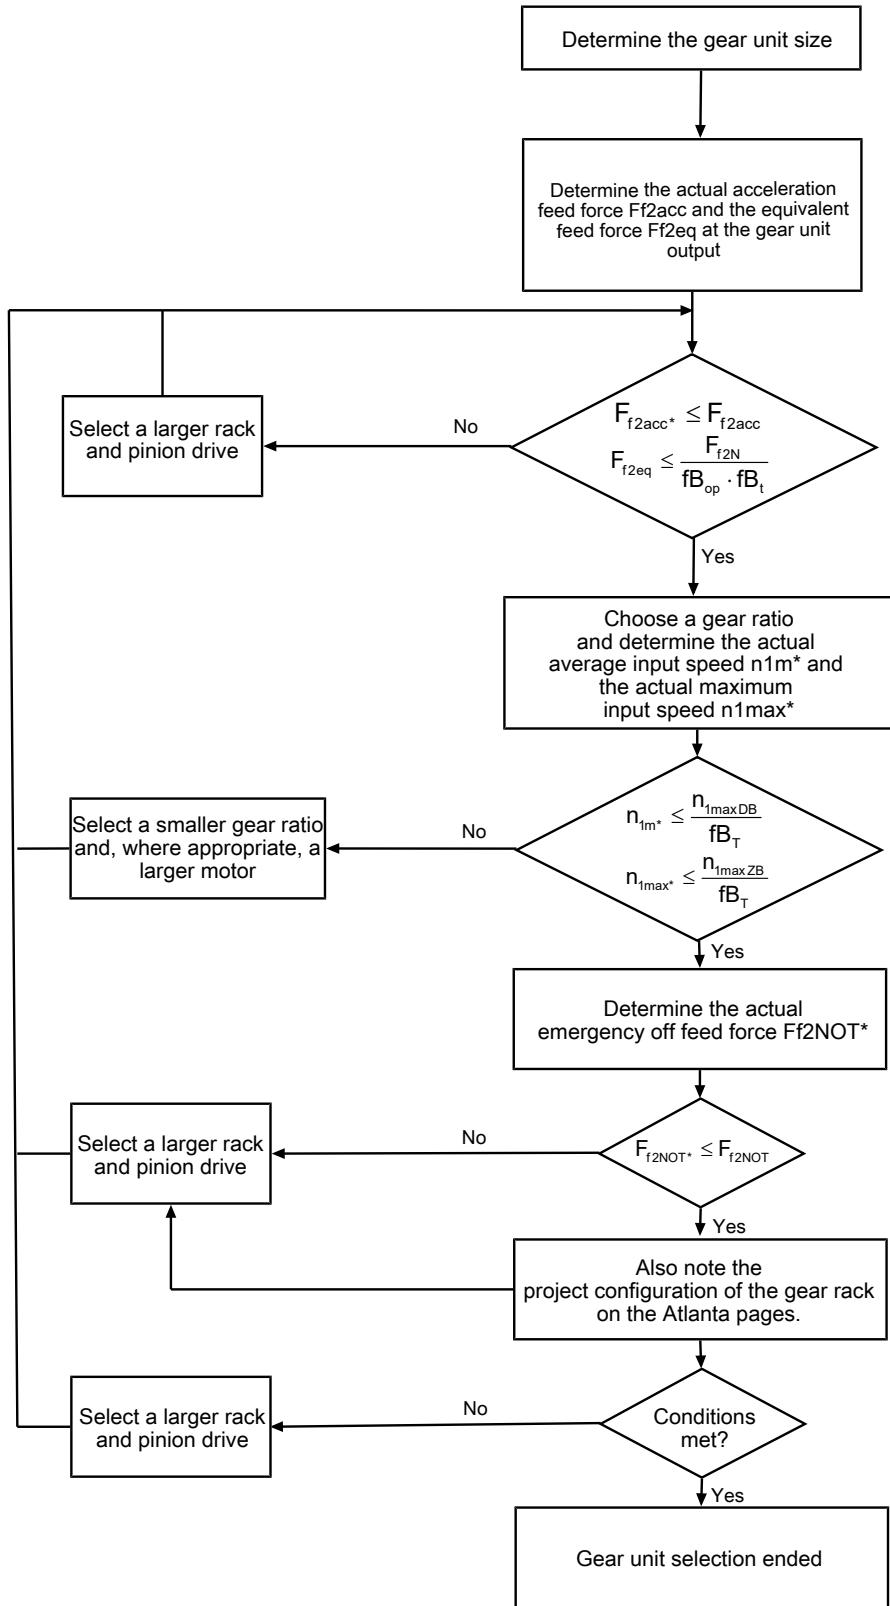

It is the most convenient and reliable method of drive selection, as the entire torque/speed curve of the application is displayed and evaluated here in the curve of the geared motor.

In this chapter, only limit values for specific operating points can be taken into consideration for manual drive selection.

The formula symbols for values actually present in the application are marked with *.

An explanation of the formula symbols can be found in the chapter [▶ 13.1].

12.6.1 Drive selection

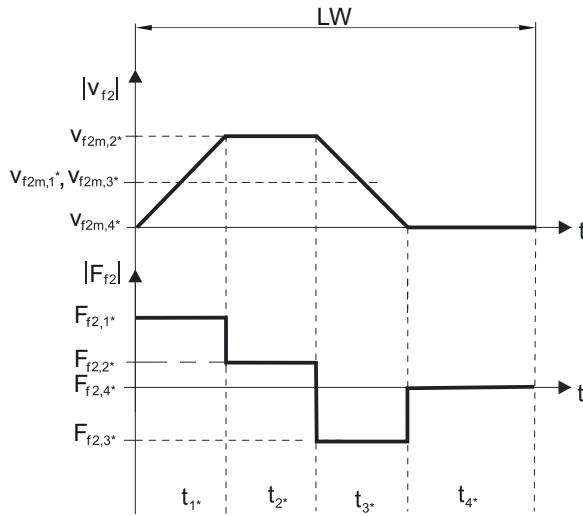

Refer to the selection tables for the values for i , $n_{1\max DB}$, $n_{1\max ZB}$, F_{f2acc} , F_{f2N} and F_{f2NOT} . The forces depend on the pinion position (E or S). The speeds are partially dependent on the mounting position.

The values for fB_T , fB_{op} and fB_t can be found in the corresponding tables in this chapter.

Example of cyclic operation

The following calculations are based on a representation of the power taken from the output based in accordance with the following example:

Calculation of the actual maximum acceleration feed force

$$F_{f2acc*} = m \cdot a \cdot F_L*$$

Calculation of the actual average input speed

$$n_{fm*} = \frac{v_{f2m*} \cdot i}{d_0 \cdot \pi}$$

$$v_{f2m*} = \frac{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}{t_{1*} + \dots + t_{n*}}$$

If $t_{1*} + \dots + t_{3*} \geq 6$ min, determine v_{2m*} without the rest phase t_{4*} .

The values for the ratio i can be found in the selection tables.

Calculation of the actual emergency off feed force

$$F_{f2NOT*} = m \cdot a_{NOT*} + F_L*$$

Calculation of the actual equivalent feed force

$$F_{f2eq*} = \sqrt[3]{\frac{|v_{f2m,1*}| \cdot t_{1*} \cdot |F_{f2,1*}|^3 + \dots + |v_{f2m,n*}| \cdot t_{n*} \cdot |F_{f2,n*}|^3}{|v_{f2m,1*}| \cdot t_{1*} + \dots + |v_{f2m,n*}| \cdot t_{n*}}}$$

Operating factors

Operating mode	$f_{B_{op}}$
Uniform continuous operation	1.00
Cyclic operation	1.25
Reversing load cyclic operation	1.40
Run time	$f_B t$
Daily runtime ≤ 8 h	1.00
Daily runtime ≤ 16 h	1.15
Daily runtime ≤ 24 h	1.20

Temperature		f_{B_T}
Motor cooling	Surrounding temperature	
Motor with forced ventilation	$\leq 20^\circ\text{C}$	0.9
	$\leq 30^\circ\text{C}$	1.0
	$\leq 40^\circ\text{C}$	1.15
Motor with convection cooling	$\leq 20^\circ\text{C}$	1.0
	$\leq 30^\circ\text{C}$	1.1
	$\leq 40^\circ\text{C}$	1.25

Notes

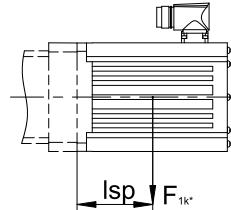

- The maximum permitted gear unit temperature (see the "Other product features" chapter) must not be exceeded, as that could result in damage.
- For braking from full speed (for example, when the power fails or when setting up the machine), note the permitted gear unit feed forces (F_{f2acc}, F_{f2NOT}) in the selection tables.

12.6.2 Permitted breakdown torques at the gear unit input

For a horizontal mounting position of the motor, verify that the permitted breakdown torque at the gear unit input is not exceeded before installation on a STOBER gear unit. You can find information for how to do that in this chapter.

Calculate the actual breakdown torque as follows:

$$M_{1k^*} = F_{1k^*} \cdot l_{sp} \leq M_{1k}$$

Type	M_{1k} [Nm]
ME10	25
ME20	60
ME30	125
ME40	250
ME50	600

13.3 Sales terms and delivery conditions	199
13.4 Publication details	199
13.5 ATLANTA product catalog pages	201

13.1 Formula symbols

The formula symbols for values actually present in the application are marked with *.

Symbol	Unit	Explanation
a^*	m/s^2	Acceleration
a_{NOT}^*	m/s^2	Emergency off acceleration
C_{lin}	$\text{N}/\mu\text{m}$	Total linear spring rigidity
d_0	mm	Pitch circle diameter
d_{MW}	mm	Motor shaft diameter
Δs	mm	Linear backlash resulting from the backlash of the gear unit
Δs_{red}	mm	Reduced linear backlash resulting from the backlash of the gear unit
F_{1k^*}	N	Static and dynamic loads present in the application from the weight of the motor, mass acceleration and vibrations at the gear unit input
$ F_{f2} $	kN	Absolute value of feed force at output
$F_{f2,1^*} - F_{f2,4^*}$	kN	Existing feed force in the respective time segment (1 to 4)
F_{f2,n^*}	kN	Existing feed force in the nth time segment
fB_{op}	—	Operating mode operating factor
fB_t	—	Runtime operating factor
fB_T	—	Temperature operating factor
F_{f2acc}	kN	Permitted acceleration feed force at the gear unit output
F_{f2acc^*}	N	Actual acceleration feed force at the gear unit output
F_{f2accE}	kN	Permitted acceleration feed force at the gear unit output, pinion position E
F_{f2accS}	kN	Permitted acceleration feed force at the gear unit output, pinion position S
F_{f2eq}	kN	Equivalent feed force at the gear unit output
F_{f2eq^*}	kN	Actual equivalent feed force at the gear unit output
F_{f2N}	kN	Nominal feed force at the gear unit output for $n_1 = 500 \text{ rpm}$
$F_{f2N,E}$	kN	Nominal feed force at the gear unit output for $n_1 = 500 \text{ rpm}$, pinion position E
$F_{f2N,S}$	kN	Nominal feed force at the gear unit output for $n_1 = 500 \text{ rpm}$, pinion position S
F_{f2NOT}	kN	Emergency off feed force of the gear unit at the gear unit output for a maximum of 1000 load changes
F_{f2NOT^*}	kN	Actual emergency off feed force at the gear unit output
$F_{f2NOT,E}$	kN	Emergency off feed force of the gear unit at the gear unit output for a maximum of 1000 load changes, pinion position E
$F_{f2NOT,S}$	kN	Emergency off feed force of the gear unit at the gear unit output for a maximum of 1000 load changes, pinion position S
F_L^*	N	Existing load force
i	—	Gear ratio
m^*	kg	Mass to be accelerated
M_{1k}	Nm	Permitted tilting torque at the gear unit input
M_{1k^*}	Nm	Existing tilting torque on the gear unit input
M_{2acc}	Nm	Maximum permitted acceleration torque on the gear unit output
M_{2accE}	Nm	Maximum permitted acceleration torque at the gear unit output, pinion position E
M_{2accS}	Nm	Maximum permitted acceleration torque at the gear unit output, pinion position S
m_n	mm	Module
n_{1m^*}	rpm	Actual average input speed
n_{1max^*}	rpm	Actual maximum input speed
n_{1maxDB}	min^{-1}	Maximum permitted input speed of the gear unit in continuous operation
$n_{1maxDBEL1,2}$	rpm	Maximum permitted input speed of the gear unit in continuous operation Mounting positions EL1, EL2
$n_{1maxDBEL3,4,5,6}$	rpm	Maximum permitted input speed of the gear unit in continuous operation Mounting positions EL3, EL4, EL5, EL6
n_{1maxZB}	min^{-1}	Maximum permitted input speed of the gear unit in cyclic operation
t	s	Time
$t_{1^*} - t_{4^*}$	s	Duration of the respective time segment (1 to 4)
t_n^*	s	Duration of the n-th time segment
$ v_{f2} $	m/s	Absolute value of feed velocity

Symbol	Unit	Explanation
v_{f2m*}	m/s	Actual average feed velocity
$v_{f2m,1*} - v_{f2m,4*}$	m/s	Actual average feed velocity in the respective time segment (1 to 4)
$v_{f2m,n*}$	m/s	Actual average feed velocity in the nth time segment
$v_{f2maxZB}$	m/s	Maximum feed velocity at the gear unit output at n_{1maxZB}
x	mm	Profile offset factor
z	-	Number of teeth

13.5 ATLANTA product catalog pages

The following pages include an excerpt from the product catalog of ATLANTA Antriebssysteme.

ATLANTA Antriebssysteme GmbH
Carl-Benz-Str. 16
74321 Bietigheim-Bissingen
Germany
Tel. +49 7142 7001-0
info@atlantagmbh.de
www.atlantagmbh.de

The values given in the load table are based upon uniform, smooth operation, $K_{HB}=1,0$ and reliable grease lubrication. Since, in practice, the applications are very diverse, it is important to consider the given conditions by using appropriate factors S_B , K_A , L_{KHB} and f_n (see below).

Formulas for determining the tangential force

$$a = \frac{V}{t_b} \quad [\text{m/s}^2]$$

$$F_u = \frac{m \cdot g + m \cdot a}{1000} \quad (\text{for lifting axle}) \quad [\text{kN}]$$

$$F_u = \frac{m \cdot g \cdot \mu + m \cdot a}{1000} \quad (\text{for driving axle}) \quad [\text{kN}]$$

$$F_{u \text{ perm.}} = \frac{F_{u \text{ tab}}}{K_A \cdot S_B \cdot f_n \cdot L_{KHB}} \quad [\text{kN}]$$

Formula dimensions see page ZD-3

The condition $F_u < F_{u \text{ perm.}}$ must be fulfilled.

Load factor K_A

Drive	Type of load from the machines to be driven		
	uniform	medium shocks	heavy shocks
uniform	1,00	1,25	1,75
light shocks	1,25	1,50	2,00
medium shocks	1,50	1,75	2,25

Safety coefficient S_B

The safety coefficient should be allowed for according to experience ($S_B = 1.25 \div 1.50$). This is valid for rack drives with one drive / rack line. For multiple drives on one rack line, as well as for preloaded drives, this safety coefficient have to be increased. In case of doubts please contact our technical service.

Life-time factor f_n

considering of the peripheral speed of the pinion and lubrication.

Lubrication	contin.	daily	monthly
Peripheral speed of gearing m/sec m/min			
0,5	30	0,85	0,95
1,0	60	0,95	1,10
1,5	90	1,00	1,20
2,0	120	1,05	1,30
3,0	180	1,10	1,50
5,0	300	1,25	1,90

Linear load distribution factor L_{KHB}

The linear load distribution factor considers the contact stress, while it describes unintegrated load distribution over the tooth width ($L_{KHB} = \sqrt{K_{HB}}$).

$L_{KHB} = 1,1$ for counter bearing, e.g. Torque Supporter

= 1,2 for preloaded bearings on the output shaft e.g. Atlanta Ht-, HP- and E-servo worm gear unit,
BG-bevel gear unit

= 1,5 for unpreloaded bearings on the output shaft e.g. Atlanta B-servo worm gear unit

Calculation example

Values given

⊗ travelling operation	
mass to be moved	m = 820 kg
speed	v = 2 m/s
acceleration time	t _b = 1 s
acceleration due to gravity	g = 9,81 m/s ²
coefficient of friction	μ = 0,1
load factor	K _A = 1,5
life-time factor	f _n = 1,05 (cont. lubrication)
safety coefficient	S _B = 1,4
linear load distribution factor	L _{KHβ} = 1,5

Calculation process

$$a = \frac{v}{t_b} \quad a = \frac{2}{1} = 2 \text{ m/s}^2$$

$$F_u = \frac{m \cdot g \cdot \mu + m \cdot a}{1000}$$

$$F_u = \frac{820 \cdot 9,81 \cdot 0,1 + 820 \cdot 2}{1000} = 2,44 \text{ kN}$$

permissible feed force F_{u Tab} :
rack C45, ind. hardened, Q10, straight tooth, module 3,
pinion 16MnCr5, case hardened, 20 teeth
page ZB-40 with F_{u Tab} = 11,5 kN

$$F_{u\ per.} = \frac{F_{u\ Tab}}{K_A \cdot S_B \cdot f_n \cdot L_{KH\beta}} ;$$

$$F_{u\ per.} = \frac{11,5 \text{ kN}}{1,5 \cdot 1,4 \cdot 1,05 \cdot 1,5} = 3,47 \text{ kN}$$

Condition

$$F_{u\ per.} > F_u ; 3,47 \text{ kN} > 2,44 \text{ kN} \Rightarrow \text{fulfilled}$$

Result: Rack 27 30 101 Page ZB-13
Pinion 24 35 220 Page ZB-23
case hardened

Your calculation

Values given

⊗ travelling operation	
mass to be moved	m = _____ kg
speed	v = _____ m/s
acceleration time	t _b = _____ s
acceleration due to gravity	g = _____ m/s ²
coefficient of friction	μ = _____
load factor	K _A = _____
life-time factor	f _n = _____
safety coefficient	S _B = _____
linear load distribution factor	L _{KHβ} = _____

Calculation process

$$a = \frac{v}{t_b} \quad a = \frac{_____}{_____} = \text{_____} \text{ m/s}^2$$

$$F_u = \frac{m \cdot g \cdot \mu + m \cdot a}{1000} ; F_u = \frac{_____}{1000} = \text{_____} \text{ kN}$$

permissible feed force F_{u Tab}

$$F_{u\ per.} = \frac{F_{u\ Tab}}{K_A \cdot S_B \cdot f_n \cdot L_{KH\beta}} ;$$

$$F_{u\ per.} = \frac{_____}{_____} = \text{_____} \text{ kN}$$

Condition

$$F_{u\ per.} > F_u ; \text{_____ kN} > \text{_____ kN} \Rightarrow \text{fulfilled}$$

Calculation example

Values given

⊗ travelling operation

mass to be moved $m = 300 \text{ kg}$

speed $v = 1,08 \text{ m/s}$

acceleration time $t_b = 0,27 \text{ s}$

acceleration due to gravity $g = 9,81 \text{ m/s}^2$

load factor $K_A = 1,2$

life-time factor $f_n = 1,1$ (cont. lubrication)

safety coefficient $S_B = 1,4$

linear load distribution factor $L_{KHB} = 1,2$

Your calculation

Values given

⊗ travelling operation

mass to be moved $m = \underline{\hspace{10cm}} \text{ kg}$

speed $v = \underline{\hspace{10cm}} \text{ m/s}$

acceleration time $t_b = \underline{\hspace{10cm}} \text{ s}$

acceleration due to gravity $g = \underline{\hspace{10cm}} 9,81 \text{ m/s}^2$

load factor $K_A = \underline{\hspace{10cm}}$

life-time factor $f_n = \underline{\hspace{10cm}}$

safety coefficient $S_B = \underline{\hspace{10cm}}$

linear load distribution factor $L_{KHB} = \underline{\hspace{10cm}}$

Calculation process

Results

$$a = \frac{v}{t_b} \quad a = \frac{1,08}{0,27} = 4 \text{ m/s}^2$$

$$F_u = \frac{m \cdot g + m \cdot a}{1000} \quad F_u = \frac{300 \cdot 9,81 + 300 \cdot 4}{1000} = 4,1 \text{ kN}$$

permissible feed force $F_{u \text{ Tab}}$:
rack C45, ind. hardened, Q6, helical tooth, module 2,
pinion 16MnCr5, case hardened, 20 teeth
page ZA-31 with $F_{u \text{ Tab}} = 11,5 \text{ kN}$

$$F_{u \text{ per.}} = \frac{F_{u \text{ Tab}}}{K_A \cdot S_B \cdot f_n \cdot L_{KHB}} ; F_{u \text{ per.}} = \frac{11,5 \text{ kN}}{1,2 \cdot 1,4 \cdot 1,1 \cdot 1,2} = 5,18 \text{ kN}$$

Condition

$$F_{u \text{ per.}} > F_u ; 5,18 \text{ kN} > 4,1 \text{ kN} \Rightarrow \text{fulfilled}$$

Result: Rack 29 20 105 Page ZA-7
Pinion 24 29 520 Page ZA-24

Calculation process

Results

$$a = \frac{v}{t_b} \quad a = \underline{\hspace{10cm}} = \underline{\hspace{10cm}} \text{ m/s}^2$$

$$F_u = \frac{m \cdot g + m \cdot a}{1000} \quad F_{u \text{ req.}} = \frac{\underline{\hspace{10cm}}}{1000} = \underline{\hspace{10cm}} \text{ kN}$$

permissible feed force $F_{u \text{ Tab}}$

$$F_{u \text{ per.}} = \frac{F_{u \text{ Tab}}}{K_A \cdot S_B \cdot f_n \cdot L_{KHB}} ; F_{u \text{ per.}} = \underline{\hspace{10cm}} = \underline{\hspace{10cm}} \text{ kN}$$

Condition

 $GT_f/2000 \leq 0,044 \text{ mm} (\Delta 0,022 \text{ mm}/1000)$.

- Teeth hardened with the ATLANTA high performance hardening process and ground
- case hardening steel acc. ATLANTA-Standard
- ground on all sides after hardening

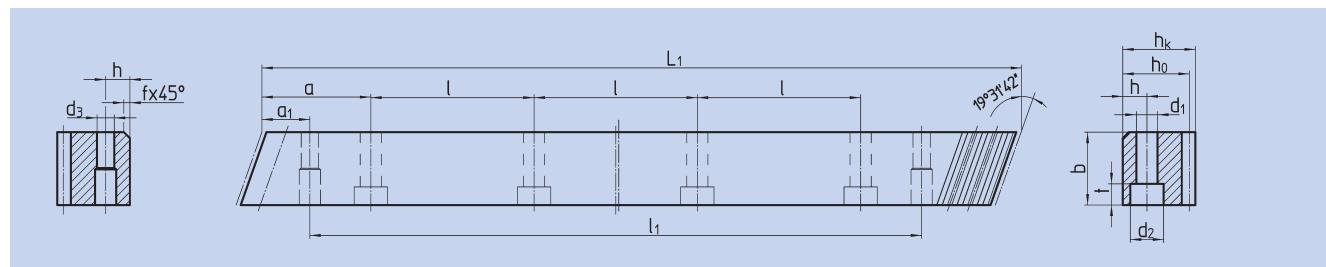

Mounting racks, see Atlanta Servo Drive catalogue.

To achieve precision rack joints, we recommend our patented assembly kit, see Atlanta Servo Drive catalogue.

For lubrication of racks & pinions we recommend our automatic lubrication system, see Atlanta Servo Drive catalogue.

For the calculation and selection of the rack & pinion drive, see calculation sample in the Atlanta Servo Drive catalogue.

Screws for rack mounting, see Atlanta Servo Drive catalogue.

1) This racks could be used for continuous linking only with the left side (see sketch).

2) The screw joint limits the feed force.

Total pitch error $GT_f/1000 \leq 0,034 \text{ mm}$,
 $GT_f/1500 \leq 0,041 \text{ mm} (\Delta 0,027 \text{ mm}/1000)$,
 $GT_f/2000 \leq 0,044 \text{ mm} (\Delta 0,022 \text{ mm}/1000)$.

- Teeth hardened with the ATLANTA high performance hardening process and ground
- heat-treatable steel acc. ATLANTA-Standard, carburized
- ground on all sides after hardening

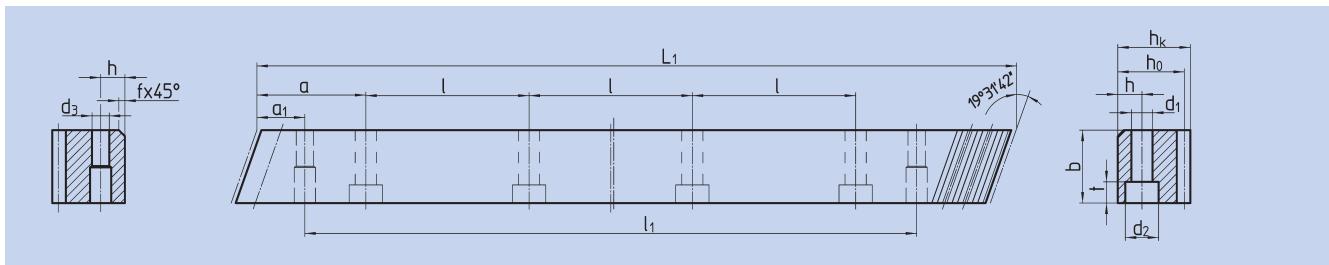

Mounting racks, see Atlanta Servo Drive catalogue.

To achieve precision rack joints, we recommend our patented assembly kit, see Atlanta Servo Drive catalogue.

For lubrication of racks & pinions we recommend our automatic lubrication system, see Atlanta Servo Drive catalogue.

For the calculation and selection of the rack & pinion drive, see calculation sample in the Atlanta Servo Drive catalogue.

Screws for rack mounting, see Atlanta Servo Drive catalogue.

Lubrication of rack and pinion drives

When lubricating rack and pinion drives by means of a felt gearwheel and electronically controlled lubricator the optimal grease supply can be seen from the diagram below. For lubrication with sliding brush use the next higher switch position. If, for example, micro-switch position 4 is chosen for felt-gearwheel lubrication, choose 3 for sliding-brush lubrication at the same speed and with the same module.

Pressure build-up

Set all micro-switches to „ON“. Pressure build-up time 6–8 hours. Then set the desired time. The micro-switch 7 must be always on. Before starting up the lubricator the connecting hose between felt wheel and lubricator should be filled and the felt wheel soaked with grease.

Battery exchange

The guaranteed service life of the battery is 1 year. Then the battery should be replaced. Although the control lamp may still flash it is possible that the battery capacity has already decreased. The lubricator can also be operated by means of external power supply via an intermediate relay.

Recommended lubricants for rack drives:

Felt-gear lubrication: Klüber Microlube GB 0
Order code 65 90 002 (1 kg)
 Klüber Structovis AHD
Order code 65 90 003 (1 kg)

Sliding brush lubrication: Klüber Microlube GB 0
Order code 65 90 002 (1 kg)

Furthermore the following lubricants have been tested with good results.

Oest Langzeitfett LT 200
 BP Energearse LS EP 00
 DEA Glissando 6833 EP 00
 Fuchs Lubritech Gearmaster ZSA
 Molykote G-Rapid plus 3694
